The opening of the twelve banks in the system should have one immediate effect for good, entirely apart from the more fundamental benefits the system was designed to bestow. It will release a considerable percentage of the reserves which the banks are now required by law to hold.

National banks are now required to keep a reserve of twenty-five per cent of their deposits. Under the new law, national banks not in reserve cities must keep a reserve equal to twelve per cent of their demand deposits plus five per cent of their time deposits; banks in reserve cities must keep a reserve of fifteen per cent of demand deposits plus five per cent of time deposits; and banks in central reserve cities must keep a reserve of eighteen per cent of demand plus five per cent of time deposits.

Of these reserves a part only need be kept in the bank's own vaults while the rest may be deposited in the reserve bank of the district.

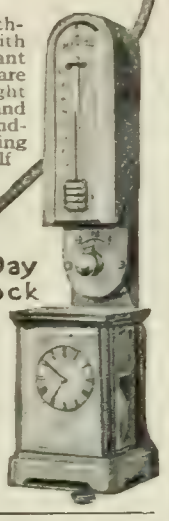
According to the estimates of the Treasury Department, set forth by Secretary McAdoo, $400,000,000 will be released from confinement as reserve funds when the regional banks are opened. It is estimated that from $105,000,000 to $115,000,000 will be released in the New York banks alone by this provision.

The release of such sums should make a considerable addition to the amounts that may be loaned by member banks, and the business world ought to find itself able to get accommodation with greater facility at an early date.

The Heart of the Heating Plant

You can have exactly the degree of warmth desired during the day, indicate at bed-time the temperature for the night and secure automatically at the "getting up hour" a re-sumption of the warmer daytime temperature.

The "MINNEAPOLIS" HEAT REGULATOR



with time attachment

Not only maintains these even, health-ful temperatures but does away with all guess work, worry and constant attention to dampers. Square clock model gives an eight day service of both time and morning change with one wind-ing. Used with any heating plant. Soon pays for itself in fuel saved.

The Standard For Thirty Years

1 Day Clock

8 Day Clock

Sold, installed and guaran-teed satisfactory by the heating trade everywhere.

MISSOURI'S FULL-CREW BILL

A significant occurrence of the election was the defeat in Missouri by popular vote of what the labor unions call a "full crew" and the railroads an "extra crew" bill. The bill had been past by the Legislature and came before the people by referendum.

Missouri is not one of the states where one would expect to find undue sympathy for corporations. One would not, in normal times, expect Missourians to deal with especial tenderness with the railroads.

So the action of the Missouri voters is especially significant. It is indicative of a widespread conviction that the railroads in this critical time need help rather than hampering. Full crew laws have been past in several states. They are favored by the labor unions for the obvious reason that they give employment to more men. They are opposed by the railroads on the ground that they involve great added expense of operation with no commensurate advantage to the public.

This is the first time, we believe, that a bill of this particular kind has come directly before the people for decision. The result of the vote is gratifying in two directions. It is gratifying as showing that the people appreciate the importance to all of prosperity for he railroads. It is no less gratifying as showing that the people may be trusted to do justice even to corporations.

The vote in Missouri should be commended to the Interstate Commerce Commission for its earnest consideration. That is the way the people feel about the railroads at this time. The Commission would do well to realize this feeling and make it effective in their new decision of the rate case.

American coal producers have been offered an opportunity to bid on a coal contract calling for 300,000 tons a year for three years for Chilean railroads. South America has been accustomed to get its coal from Europe, but that source of supply is now largely shut off. The placing of such a contract as this would mean the continued employment of large numbers of miners during what is ordinarily a dull season. This is only another example of the kind of opportunity the war is offering to American enterprise.

The great task that is to be America's of feeding the world is pictured in the following figures of exports of wheat during the past three months of this year and the corresponding months of last year, as set forth by the *Journal of Commerce*:

From—	1914. bushels.	1913. bushels.
North America	73,784,000	58,912,000
Russia	32,000	32,928,000
Balkan States	168,000	4,464,000
India	3,312,000	10,592,000
Argentina	1,696,000	5,368,000
Australasia	2,064,000	5,728,000
Sundry countries	800,000	1,784,000
Grand total	80,856,000	119,776,000

The following dividends are announced:

American Cotton Oil Company, preferred, semi-annual, 3 per cent, payable December 1.

Liggett & Myers Tobacco Company, common, quarterly, 3 per cent, payable December 1.

Mike Bercent Pond Company, preferred, quarterly, 1¾ per cent, payable November 16.

Pratt & Whitney Company, preferred, quarterly, 1¾ per cent, payable November 16.

W. D. WYMAN, President
W. S. WELD, Supt. of Agencies

Atlantic Mutual Insurance Co.
Atlantic Building, 51 Wall St. New York

Insures Against Marine and Inland Transportation. Risk and Will Issue Policies Making Loss Payable in Europe and Oriental Countries

Chartered by the State of New York in 1842, was preceded by a stock company of a similar name. The latter company was liquidated and part of its capital, to the extent of $100,000, was used, with consent of the stockholders, by the Atlantic Mutual Insurance Company and repaid with a bonus and interest at the expiration of two years.

During its existence the company has issued property to the value of	$27,219,045,826.00
Received premiums thereon to the extent of	282,298,429 80
Paid losses during that period	141,567,550.50
Issued certificates of profits to dealers	89,740,400.00
Of which there have been redeemed	82,497,340.00
Leaving outstanding at present time	7,243,060.00
Interest paid on certificates amounts to	22,585,640.25
On December 31, 1913, the assets of the company amounted to	13,259,024.16

The profits of the company revert to the assured and are divided annually upon the premiums terminated during the year, thereby reducing the cost of insurance.

For such dividends, certificates are issued subject to dividends of interest until ordered to be redeemed, in accordance with the charter.

GET THE SAVING HABIT

The habit of saving has been the salvation of many a man. It increases his self-respect and makes him a more useful member of society. If a man has no one but himself to provide for he may be concerned simply in accumulating a sufficient sum to support him in his old age. This can best be effected by purchasing an annuity as issued by the Home Life Insurance Company of New York. This will yield a much larger income than can be obtained from any other absolutely secure investment. For a sample policy write to

HOME LIFE INSURANCE COMPANY

INSURANCE

CONDUCTED BY W. E. UNDERWOOD

NEW YORK FIRE INSURANCE COMPANIES

Recently, while looking thru the New York Insurance Department's report for the year 1873, our attention was attracted by the comparatively greater number of local fire insurance companies operating in 1872. The names of many of them were familiar, of course, but more than half of those composing the roster were strangers to the eye and ear. There are few business men of New York City doubtless, who remember the Aetna or the Adriatic; or that we had an Arctic Fire Insurance Company. Up the state, at Watertown, flourished the Black River Insurance Company; at Herkimer, the Farm Buildings Fire Insurance Company; and at Meridian the Farmers' Joint Stock Insurance Company. There were the Holland Purchase at Batavia, the New York Central at Union Springs, the Rochester German at Rochester and the Watertown Fire at Watertown.

In 1872 the total number of New York state fire insurance companies was ninety-three, of which sixty-eight were domiciled in New York City, eleven in Brooklyn and the remainder at various other places in the state. Not one of the Brooklyn companies has survived (unless we include the Williamsburgh City, which moved to New York years ago); but five of the up-state companies remain, and only twelve of the sixty-eight in New York City.

To sum up, out of ninety-three which were in apparently a prosperous financial condition forty-two years ago, there remain but eighteen. It must be borne in mind, too, that the companies of 1872 had survived the big Chicago and Boston fires and that the misfortunes of those which fell by the wayside were not due to the losses incurred in those conflagrations. The failure of seventy-five companies out of ninety-three gives us an average mortality of eighty per cent, a result which indicates the uncertainties attending that business. There are at the present time but forty-one New York fire insurance companies in existence; and of these, nineteen are less than twenty years old, one is forty years old, one is twenty-eight years old, two are twenty-three years old, and the others, eighteen in number, more than forty years old.

WRITE THE COMPANY

In his company's monthly publication, *Plico*, Major Marmaduke B. Bowden, publicity manager of the Philadelphia Life Insurance Company, makes a sensible plea for fair play when he adjures policyholders to take their complaints or criticisms directly to the companies concerned. "Tell your troubles to your company," he advises, "and rest assured it will satisfy you."

That is always the proper thing to do. Such faults as a policyholder may find in a company or, as is more often the case, some one else finds for and points out to him, should be laid before the management of that company. They are entitled to an opportunity to explain. They may do it satisfactorily. If they cannot, then the policyholder is warranted in carrying the matter further. The policyholder who pursues this course serves his own interests, for he thereby comes at the truth; and that is what he needs.

The representative of a rival company is generally not an impartial critic of his competitors. His statements should always be carefully examined and fully confirmed. This is important when the object of the criticism is to get the person assured to discontinue an existing policy. The canvasser is then wholly interested in making commissions by the sale of a new policy in the company he represents. This may, and often does, result in the sacrifice by the policyholder of valuable equities.

So the safe, as well as the fair, thing to do is to go to the company criticized and require it to make a satisfactory defense.

TO A CORRESPONDENT

A correspondent in Kansas asks me the following questions: "Does the insurance law of Colorado prohibit insurance being taken in that state by correspondence? If it does, do you consider such a law valid?"

There probably is no law there which in specific terms prohibits a citizen from sending out of the state for an insurance policy; but there is one requiring companies which issue policies on Colorado risks to be licensed by the insurance department there. The company not admitted to transact business may surreptitiously receive applications and issue policies, but in doing so it violates the law. If the company is licensed in the state, and the citizen sends his application directly to the company, or thru one of its agents in another state, the resident agency law, which requires companies to do their business thru agents domiciled in that state, is violated; and it is probable that the company would be disciplined if the facts became known to the insurance department. Of course, the nonresident agent could not be reached.

These regulations are doubtless valid, or would be so held by the courts of last resort, under the principle that a state may make any conditions it considers proper in exchange for its consent given to a foreign corporation to transact business within its borders. But that is not admitting its justice. Any citizen of the United States should own, as a right, the privilege of transacting any legitimate business, anywhere in the United States.

If the amendment to the Federal Constitution proposed by Mr. Darwin P. Kingsley, president of the New York Life Insurance Company, were now a part of the fundamental law, a company that transacts an interstate business could sell its policies anywhere in the country, regardless of state lines. But it is not, and insurance is "cabined, cribbed, confined" by a network of petty local laws that act as a brake on its progress, and a money burden of about $18,000,000 a year in taxes on its patrons.

THE FACE OF THE EARTH

The latest geodetic surveys disclose the fact that the average elevation of the United States above sea-level is about 2500 feet.

Natural gas has been found along the base of the Rocky Mountains in northern Alberta, and preparations for its extensive use are making at Edmonton and elsewhere.

Swiss meteorologists announce that altho the mighty Rhone glacier is still dwindling, most of the Swiss glaciers have advanced decidedly lately, owing to the unusual cold summers of the last two years.

The planting of vanilla, for which the Seychelle Islands were long famous, has been somewhat neglected of late in favor of coconut growing; but planters are now resuming the culture of the vanilla beans on an extensive scale and under improved methods.

The United States Geological Survey has lately issued a large book on the Missouri River drainage-area, in which it is shown that the Missouri rises in Redrock Lake, in the Rocky Mountains, 6700 feet above sea-level, flows thru ten states, and has a total drainage-area of 492,000 square miles.

European oceanographers are urging that advantage be taken of the approaching naval celebration of the opening of the Panama Canal to make a simultaneous transatlantic survey of the ocean, every one of the vessels converging toward Panama carrying out similar and nearly coincident scientific work as they cross the Atlantic.

Astronomers report that the dust from the explosion of the Katmai volcano, in the Aleutian Islands, in August, 1912, has now nearly settled. The clearing of the atmosphere has taken less time than after the Katmai eruption of 1902-3, and much less than following the outburst of Krakatoa in 1883, when some obscurity remained in the atmosphere for three years.

The greatness of the Pamirs, the high mountain-region between Kashmir and Turkestan, is shown by the fact that, despite a half-century of exploration a British expedition under Sir Aurel Stein has reported the recent survey of 1200 miles of country never before even seen by European eyes. It contains large areas of fine pine forest and extensive meadows, and is suitable for a much larger population than now utilizes it. Its ruler is on friendly terms with the Indian Government.

The latest results of the study of the dimensions of the earth, considering gravity observations, are these:

Equatorial radius, 6,378,388 ± 18 meters.

Polar semi-diameter, 6,356,909 meters.

Reciprocal of flattening, 297.0 ± 0.5.

Reducing this to English measurements (counting the meter by the London standard at 39.37011 inches), the diameter of the globe thru the plane of the equator works out at about 7954 miles; and the polar diameter as 26½ miles less.

S O S

Belgians Are Starving

"He Gives Twice Who Gives Quickly"

MILLIONS of Belgians face starvation. They will perish if succor does not come at once. Their plight is desperate. It cries out as imperiously as the wireless S. O. S. from a sinking ship. And this call is being heeded. Fast ships bearing food have been rushed to the rescue. But more must follow.

Cable Answers S. O. S.

This Belgian Relief Committee cabled $50,000 from big, generous America to Ambassador Page, to use for buying food in England to hurry to Belgium as first aid, and $20,000 was cabled to United States Minister Brand Whitlock, in Brussels, and used in the same way. In Brussels alone one hundred soup kitchens are feeding 100,000 hungry people. The daily cable dispatches, in unbiased news reports, are giving a continuous account of the appalling disaster and desolation.

Succor From America

In America how different the picture. This magazine will reach its readers just about Thanksgiving time. We have had bountiful harvests and despite rather dull times we have great surpluses of food and money. So 40 national magazines are carrying in their Christmas issues this appeal to their millions of readers to succor the starving Belgians. Divide your Christmas plenty with them. Be sure that the gift will be "twice blessed."

Send a Christmas Check Today

Send a check today, before it slips your mind, to J. P. Morgan & Co., 23 Wall Street, New York, and mark it for the Belgian Relief Fund. You will receive a receipt and the money will at once go to the Belgian Relief Committee, which will use it for these two purposes:

1 **To relieve immediate distress of Belgian refugees and the hundreds of thousands of destitute women and children and other non-combatants in Belgium.**

2 **To rehabilitate as soon as practicable the poor Belgian peasant and working classes by helping them get roofs over their heads and tools to work with.**

CADILLAC ENCLOSED CARS

Here is provided the harmonious blending of the highest engineering achievement with the utmost in designing art and coach building skill.

The engineers have provided an eight-cylinder motor of superlative smoothness. The coach builders have provided a dignified and luxurious environment.

The liquid smoothness of these cars is supplemented by a sense of complete seclusion; the seclusion by a sense of rest and relaxation; the restfulness by a sense of unexampled ease and elegance.

Buoyant springs, deep soft upholstery, appointments in quiet good taste but still almost palatial—all of these soothing influences bring supreme comfort to mind and body, and leave you almost oblivious to the fact that you are borne along by mechanical means.

Special Enclosed Car Booklet on Request.

MY MOTHER'S HOUSE

No portrayal of the suffering and cruelty of the war has come to our notice that for pure poetry and pathos is superior to this. Those who are unable to sympathize with its German point of view may change the scene from the Rhine to the Seine, where it would, unfortunately, be equally true.

Translated by Oscar Mueller, in the New York Sun.

My mother is an old lady,
Perhaps sixty or even more
(She does not like to speak about it).
My mother is a German woman,
Is only one of so many millions.

My mother's house overlooks the Rhine,
It's a gay house, it's a free house,
It's an artist's house.
Resounding with laughing and gayety
During fifty years and more.

Now mother converted the gay house
Into a sad house, a hospital.
Sixteen beds did she give, and in each
Lies a soldier.

My old mother writes:

In your library
Among all your treasures
That you gathered in all parts of the world,
Among vases from China
And the heathen gods of the South Sea,
Among your Buddhas
And Shivas and Krishnas,
Lies a youthful chap
Fresh from high school,
Eighteen years old
But he cannot see your treasures,
They stabbed out his eyes
In Louvain near Liege.

In your Indian Room
Lies a sergeant,
He was laughing today and jokingly tossed
Your little elephants of ivory.
He always says: "Soon will I return to the front."
He is tightly strapped in bandages—
The day before yesterday they cut off
Both of his legs,
And he does not know it.

In the room decorated with my beloved Dutch,
The Teniers and Ostade, the Koekkoek and Verboeckhoven,
Lies his right arm torn to pieces,
A lieutenant of dragoons.

He does not like the paintings, not knowing them,
So I bought him yesterday
A "Kaiser" picture and hung it over his bed,
You do not believe how glad it made him.

But in the adjoining room
With your ancestors
Lies a captain of the guard,
He is as pale as his linen,
Sleeps all the time,
So much blood did he lose;

But, if he's awake, he looks at the pictures,
And says: "He over there surely fought
At Sedan in Eighteen-seventy,
And he at Grossgoerschen a hundred years ago,
And the old one over there with the braid,
He fought at Leuthen."

In the terrace room, the one to the left,
Lies another lieutenant, he asked that his bed
Be placed close to the window.
He never speaks, but stares all the time
Into our garden, and the monastery adjoining
Where the old monks are walking.
He has a bride, she was in Paris
When the war broke out—and she disappeared,
And he heard of her—nothing.
Perhaps she is dead, he thinks, perhaps—
Perhaps—Then he sighs and groans:
"Perhaps." And he kisses her picture,
She was very beautiful,
His poor, German bride.

In the garden room lies a major,
He is scolding all day long,
Shot thru the abdomen, must be very painful,
And he does not suffer so much, if he can scold
The Russ, the Jap and the damned English.
So I ask him: "How do you feel?"
He always says: "The damned rats
Bit a hole into my stomach."

There is one, in the small guest room,
A senior lieutenant of the Eighty-second,
He's shot in the head
But not very dangerous.
He said yesterday: "Doctor,
I have fifty thousand marks;
They are yours if you patch me up
So I can return to the front
In three weeks." (That's what they all think.)

In your bedroom lies a hussar,
He has nineteen wounds, all over,
From shrapnel fire.
They brought him unconscious a fortnight ago,
He groans much and yells loud;
Never awoke once
In all that time,
But his hot hand clinches
His Iron Cross.
The doctor says: "We surely
Will save him, if he does not die
From starvation."

In the dining room lie three,
A pioneer and two of the infantry.
Such dear blond chaps.
They will be saved,
But the pioneer
Is doomed,
For dumdum wounds
Are difficult to heal.

About everything writes my mother,
About the uhlans in the breakfast room,
The two chasseurs in the parlor,
The general,
Who lies in the state room—
About everything writes old mother.
But about herself
She does not say a word.

My mother's house overlooks the Rhine,
Is now a hospital for sixteen,
And yet is only one such house
Of many thousands in Germany.

My mother is an old lady,
Perhaps sixty or even more,
My mother is a German woman
And yet only one of so many millions.

HOUGHTON MIFFLIN COMPANY'S IMPORTANT NEW BOOKS

ESSAYS, ETC.

THE LURE OF THE CAMERA

By CHARLES S. OLCOTT. "Mr. Olcott's knowledge of the great out-doors is ample, his love of nature absorbing, and his choice of pictorial illustrations judicious." *Photo-Era.* 48 *illustrations.* $3.00 *net.*

TALKS TO FRESHMAN GIRLS

By HELEN DAWES BROWN. Straight-to-the-point talks full of sensible advice given in a sympathetic way that strongly appeals to girls. *75 cents net.*

VAGABONDS IN PERIGORD

By H. H. BASHFORD. The adventures and experiences of a charming group of people in their leisurely foot wanderings through France. $1.25 *net.*

THE READING PUBLIC

By MACGREGOR JENKINS. The publisher of the Atlantic Monthly writes in a whimsical fashion of the public in its pursuit of literature in the home, at the club and on the suburban train and trolley. *75 cents net.*

THE COLLEGE COURSE AND THE PREPARATION FOR LIFE

By ALBERT PARKER FITCH. Eight sympathetic and straightforward talks on students' problems. $1.25 *net.*

THE LIFE OF A LITTLE COLLEGE

By ARCHIBALD MacMECHAN. A collection of rich human studies and stimulating essays on a variety of topics. $1.35 *net.*

IS CONSCIENCE AN EMOTION?

By HASTINGS RASHDALL. In three able and scholarly lectures, this work discusses the question, "Why do we approve some kinds of conduct and condemn others?" $1.00 *net.*

A BEACON FOR THE BLIND

By WINIFRED HOLT. A vivid and readable biography of Henry Fawcett, the blind Postmaster-General of England. *Illustrated.* $2.50 *net.*

BYWAYS IN BOOKLAND

By WALTER A. MURSELL. In this book Stevenson, Dickens, Borrow, Jeffries, George Gissing, and many other writers are appraised with humor and discrimination. $1.25 *net.*

THE JOYFUL HEART

By ROBERT HAVEN SCHAUFFLER. Written with the dash, humor and originality which made his "Musical Amateur" so successful. $1.25 *net.*

JUST PUBLISHED

SAMUEL F. B. MORSE

By EDWARD L. MORSE. The first authoritative biography, based on his letters and journals, of a man who was not only a great inventor, but a notable painter as well, and the intimate of many famous persons. His son has done his work with skill and intelligence, and the result is a notable addition to American biography. 2 vols. *Fully illustrated.* $7.50 *net.*

ON THE COSMIC RELATIONS

By HENRY HOLT. This study covers with extraordinary completeness, enlightenment, and authority, the whole ground of psychic phenomena, so-called as a basis for the belief in the immortality of the soul. $5.00 *net.*

MEDITATIONS ON VOTES FOR WOMEN

By SAMUEL M. CROTHERS. A quiet consideration of the subject, showing that the granting of the suffrage to women at the present time is a conservative measure. The book preserves throughout the lightness of touch and urbanity of tone for which Dr. Crothers is so well known. $1.00 *net.*

RUTHERFORD BIRCHARD HAYES

By CHARLES RICHARD WILLIAMS. A full and intimate biography of the nineteenth president of the United States, showing him as an unexpectedly interesting and important figure in our history. 2 vols. *Illustrated.* $7.50 *net.*

OPEN-AIR POLITICS

By JUNIUS JAY. This brilliant story tells of the adventures and conversations of a hunting party of notable men and contains most suggestive discussions of syndicalism and kindred topics. The author is a man eminent in public life. $1.25 *net.*

THE ABOLITION OF POVERTY

By JACOB H. HOLLANDER. This authoritative and brilliant book maintains that poverty is a "preventable disease" and suggests a programme for its prevention. 75 cents *net.*

WAR'S AFTERMATH

By DAVID STARR JORDAN and HARVEY ERNEST JORDAN. An authoritative study of the effect of the American Civil War on the quality of manhood in the South. The startling results revealed by this investigation are prophetic of what we may expect on an even larger scale from the present conflict. 75 cents *net.*

CIVILIZATION AND HEALTH

By WOODS HUTCHINSON. A breezy, authoritative discussion of some of the most important topics pertaining to the health of men and women living under the conditions of modern life. $1.50 *net.*

A FAR JOURNEY

By ABRAHAM MITRIE RIHBANY. "Mr. Rihbany's book will stand with those of Jacob Riis and Mary Antin, an eloquent tribute to the efficacy of the American melting pot."—*Chicago Tribune. Illustrated.* $1.75 *net.*

IMPRESSIONS AND COMMENTS

By HAVELOCK ELLIS. Miscellaneous observations on life, books, art, and sundry other subjects, written by a scientist with a sense of humor and a faculty for presenting every subject from a new angle. $1.50 *net.*

The postage on each book is extra

FICTION

MARY JOHNSTON'S
THE WITCH

A fascinating story of the days of Queen Elizabeth, written in Miss Johnston's richest vein of imaginative insight. Frontispiece by N. C. Wyeth. $1.40 *net.*

SAMUEL H. ADAMS'
THE CLARION

"One of the most interestingly stirring stories of modern life yet published." — *Philadelphia Public Ledger. Illustrated.* $1.35 *net.*

MRS. RINEHART'S
THE STREET OF SEVEN STARS

"A bright and human and refreshing tale of two young lovers who starved and suffered and made merry for ambition's sake. . . . A romance of Vienna's student quarter." —*N. Y. Times.* $1.25 *net.*

MEREDITH NICHOLSON'S
THE POET

"Not since Henry Harland told us the story of the gentle Cardinal and his snuffbox have we had anything as idyllic as 'The Poet.'"—*N. Y. Eve. Sun. Illustrated in color.* $1.30 *net.*

CHARLES McEVOY'S
PRIVATE AFFAIRS

"Every one of Mr. McEvoy's characters palpitates with life, and they are all the more real because he never allows himself to prejudice us either for or against them."—*Boston Transcript.* $1.25 *net.*

FRANCES N. S. ALLEN'S
HER WINGS

"In the great mass of feminist literature, this story of 'Her Wings' stands out as a very womanly presentation. It is strong, tender and very human." — *Lexington (Ky.) Herald.* $1.25 *net.*

IAN HAY'S
A KNIGHT ON WHEELS

"Full of high spirits and whimsicalities, with just enough serious touches to make it real, and some delightful characters."—*N. Y. Times.* $1.35 *net.*

VOLUME 80 MONDAY, NOVEMBER 23, 1914 No. 3441

THANKSGIVING IN 1914

AND now comes the day set for thanksgiving. But the world is so full of hate and jealousy and ravening and slaughter that we cannot hear thanks when uttered. And how can we sit down to feasting when half the world is starving? Civilization, at the bottom, has proved to be only barbarism. It has been bottomed by brute force, and the Golden Rule has never yet been even one plank in the structure. Our Christianity has given out in the presence of the old law of "An eye for an eye and a tooth for a tooth." How can there be room in the churches for Jesus now that they are needed for hospitals?

What is this that you say; O man of unfaith! and why such folly?

"Westward the star of empire takes its way" is not a mere verse from a song, but a line from cosmic law. Twice already have races crost Europe, and twice have they fingered their characteristics into the making of that continent. The Teutons crowded after the Celts, who had already displaced the Iberians. The Slavs have been pressing for a commercial and moral hearing. France and Ireland stand for the Celtic stock; England and Germany for the Teutonic; Russia wraps in its huge outlines a hundred integers of a new and untried stock, an unwasted force. Poland came first, but buried herself in the civilization and religion of her predecessors; a glorious exhibition of body and brain struggling for expression.

We Americans have little interest, however, in races and sub-races, nor even nationalities. Our own Boston has gone over to humanity; our own New England has lost every twinge of English sentiment. Westward again the star of empire took its way and crost the continent, from the Atlantic to the Pacific. Fortunately, however, this was not done before the Constitution makers in 1787 discovered or invented Federal unity. This was a method of leaving evolution to go on undisturbed; letting civilization absorb the several and distinct instincts of divers races, and still go on westward. So the cross-bred Yankee today in Oregon stands for all the races that have ever trod the continent. Dropping prejudices as they went they have created for us nearly fifty distinct states in complete and full coöperative unity.

Europe has never yet been able or willing to comprehend this most magnificent discovery in statecraft. It has undertaken to sustain raciality and nationality, and has found no other way of doing this but by standing armies. We Americans find nothing to fear from new cross-breeds; let Europe try it. It need not fear even the incarnation of brute force when softened with moral persuasion. America is a continent of cross-bred folk, as much as the fruits which Luther Burbank gives us from his nurseries.

The state of war really existed far back of the flaming bonfire. The outbreak was necessary sooner or later, to burn up the brushwood of brute force. The German Chancellor said well, "It may as well come now." If we some time are going to shoot each other, are preparing for this unholy end, let us understand it—that this is the very aim of European civilization—the logic of present civilization. Let it come and be over. Tools stand for work; and that was exactly what standing armies meant. Their work must be done. Civilization based on the Golden Rule and the Lord's Prayer are a novelty to this state of affairs. The religion of love and the state of coöperation belong in that new life which is to be led when brute force is forever refused a hearing, and Jesus is accepted as the actual master of the human race.

BUT are we to hold more strictly to the demand for a *national* Thanksgiving? If so it will not be difficult to sing our joy over the bonfire of standing armies and brute force; over the chance for a League of Peace that will stand for the principles of justice and law. An increasing chance for the Golden Rule is just ahead. As the old goes down it necessarily makes a crash that shakes the whole world; but we can thank God that Jesus has been in the world and that he never was more alive than at the present day. It is indeed remarkable that however the roar of war may fill our ears, the conviction that we are going thru with a great moral struggle is inescapable. We shall never be able to go back to the meanness of the statesmanship of the Pitts and the Disraelis of the last three or four centuries. In this country we are a rifle's range nearer the stable operation of democracy; while autocracy is exploding all over the world.

That we should have been kept out of the Great War was in the nature of the federal union. We are ready for a capital of the whole world; for peaceful coöperation that shall cover more than a single continent. Heretofore we have had nearly fifty states in growing coöperation. We can cheerfully see the day ahead when the new republics of Asia and Africa will coöperate with ours to advance human progress by common effort. There is no need of war when we agree on a federal union of humanity.

Give thanks, then, ye American people! Thank God that the drift is ever onward, toward a manlier race and a Godlier vision. Internationalism displaces nationalism. The human family is not English; nor is it German; nor is it French; nor is it Russian. No one race is to be supreme; only that manhood that makes best for love and peace, and expresses the will of the divine life. Jesus was announced by "On earth peace, good will to men." That law has not been abrogated.

CONSTRUCTIVE NEUTRALITY

IN an able article in this issue of The Independent Judge Holt urges the administration "to protest at least" against the numerous violations of the Hague Conventions by the nations now engaged in war. In this he voices the sentiments, we believe, of an increasingly large number of Americans. But the question is not so simple as it seems.

At the outbreak of hostilities our State Department should have instructed all its representatives abroad to notify the belligerent governments that the United States as a party to the Hague Conventions was prepared to call to their attention, as well as to that of all the neutral nations, every act in violation of these Conventions of which there was good evidence, so that at the conclusion of the war it could be adjudicated or settled in accordance with the principles of international justice. Such action would have put us in an impregnable position to protest against all violations that have since arisen. But now if we protest against specific acts that are alleged to have been committed it will look or be made to look as tho we are hostile to one side or the other in the conflict. This might provoke such ill feeling against us on the part of one or the other group of belligerents that our influence as mediator at the end of the war would be imperiled.

Important as it is to have the war carried on by the enlightened rules of The Hague it is even more important that a lasting peace be assured at its termination. The United States must think twice before jeopardizing her supreme influence at that time. Nevertheless we are inclined to agree with Judge Holt's plea. The United States even at this late day should protest in broad terms against all violations of international law by whomsoever committed and give notice of her intention of bringing them up for judicial consideration at the close of the war.

Such a procedure would be no violation of the spirit of neutrality. It would rather be a performance of the highest duty of neutrals.

"EMDEN" THE AUDACIOUS

ON the shore of an island in the Indian Ocean lie the twisted and shattered fragments of a little ship of war. The shells of the enemy and the leaping flames of the fires they set have brought her to this end. She will range the seas no more. So is the name of the cruiser "Emden" stricken from the roster of the Imperial German Navy.

But never, while the traditions of the fighters of the sea linger in the mind of man, will her name be missing from a more famous roll.

For fourteen weeks the little "Emden," cruiser one-eighth the size of a battleship, with the speed of a greyhound in her heels, kept the seas in hostile waters. With the cunning of the hunted fox she evaded her pursuers; with the audacity of the swooping hawk she dropt from the blue on a luckless victim. Hunted and hunter she prowled the seas.

Six and twenty merchantmen she captured, plundered and sank. Impudent as a terrier she darted into the harbor of Madras, dropt a few shells into the city, and with lights dowsed fled scatheless past the forts. Into the British harbor of Penang she steamed, disguised with a false smokestack and flying a Japanese flag, torpedoed a Russian cruiser and a French destroyer, and dashed away thru the Malacca Straits.

For weeks at a time she was swallowed up in the silences of the open ocean. Each time, save the last, she emerged to strike another blow at the commerce of the mistress of the seas. Provisioning herself from captured cargoes, coaling from a prize before she sank it, she performed the nautical equivalent of "living off the country." Run to earth by a more powerful opponent, she yielded at last to the inevitable. The quality of her fighting spirit is to be read in the laconic statement of the British Admiralty, "Her losses in personnel are reported as very heavy."

Audacious, intrepid little "Emden"! Her name shall be remembered so long as men tell tales of war and honor courage and resourcefulness.

"THE TEUTONIC CIVILIZATION"

IN a long and able letter to the *Springfield Republican* which has attracted a good deal of attention, Professor John W. Burgess, of Columbia University, says:

> It was in the year 1871, in the midst of the Franco-Prussian War, that I first trod the soil of Germania, and it was from and with those that fought in that war on the German side that I first learned the politics and diplomacy of Europe. Almost from the first day that I took my seat in the lecture room of the university, I imbibed the doctrine that the great national, international and world-purpose of the newly created German Empire was to protect and defend the Teutonic civilization of continental Europe against the oriental quasi-civilization of Russia on the one side, and the decaying Latin civilization on the other.

This is a remarkable and illuminating passage. It expresses the view, which Professor Burgess imbibed and evidently still holds, that Germany possesses a special superior civilization of its own, which was endangered by the pressure of Russian hordes on the east, and of French revenge and British commercial jealousy on the west, which were united in seeking to overwhelm Teutonic civilization.

Now what is this peculiar Teutonic civilization? We confess that we do not know. Its civilization has the same elements of social order, general refinement, knowledge and culture that appear in the civilization of Great Britain, France, Belgium, Holland and Italy. There is no such thing as a "decaying Latin civilization." Civilization is progressive, and is progressing the world over. Germany has her excellences, particularly in the specialization of her universities, just as France and Great Britain have their peculiar excellences in their freer government.

Nor was the German civilization in any real danger from Slavic ambition, nor from French attack to recover Alsace, nor from British jealousy of German commerce. It was Germany's militarism that frightened France. She was weaker than Germany and sought alliance with Russia. Germany may have been afraid of France or Russia, but not so much as France was afraid of Germany. England found in Germany a worthy commercial rival, but she never tried to strangle her rival's trade, but only urged her own manufacturers and merchants to seek better skill and wider enterprise. What Germany put her best pride and energy in was her army, but militarism is not civilization, but the foe to it. Germany

drafted every citizen into the army; Britain drafted none.

There are many statements in Professor Burgess' article that might call for question or contradiction, but we content ourselves now with quoting his prophecy of what would happen if the allies should be victorious. It will be well to remember it. He says:

> The "rattle of the saber" would then be music to our ears in comparison with the crack of the Cossack's knout and the clanking of Siberian chains, while the burden of taxation which we would be obliged to suffer in order to create and maintain the great navy and army necessary for the defense of our territory and commerce thruout the world against those gigantic powers with their oriental ally, Japan, would sap our wealth, endanger our prosperity and threaten the very existence of republican institutions.

This is a jeremiad most extraordinary. There are those who believe that with the victory of the two great republican nations of Europe, France and Great Britain, republican institutions would gain strength, might even cover the empires of Europe and that the burdens of war would be very much lessened instead of being increased. Time will tell.

FRICTION

DOUBTLESS President Wilson had good reason to be provoked by the style of the address made to him by Mr. Trotter, one of the speakers of a delegation of negroes who visited him by appointment to protest against the segregation of negro clerks in the departments at Washington. Mr. Trotter is editor of a negro paper in Boston, who offends many of his own color by his superabundant untactful belligerency. The other members of the delegation made plain but respectful addresses and helped their cause; but the President had fair occasion to tell the delegation that at any further interview with him Mr. Trotter's presence would not be acceptable.

Nevertheless the delegation had the right on their side, and the President gave them no satisfaction. During previous administrations since the war colored clerks who won a place under civil service rules were treated just like white clerks. If there were fifty or a hundred in a room they had their desks with the others, and no special complaint was made. But when this administration came in clerks from southern states began to be offended that they should work beside negroes, and the heads of departments or bureaus sympathized with them and put the colored clerks by themselves, on the ground that it was humiliating for white people to sit and work near black people on a level of equality. If they had been Indians, or half-Indians, like several honored members of Congress, there would have been no trouble, but because they were of a race that had endured slavery, they were told, in actions that speak louder than words, that they were not fit associates even in labor and must go by themselves. It was the Jim Crow car rule of the South, and the South had captured Washington.

The President did not meet the occasion properly. He defended the segregation. He said it was done "to avoid friction." Friction was not necessary; it had been trivial in the past, even when Hoke Smith was Secretary of the Interior. The heads of bureaus could control it if they cared to. Those that made friction could be dismissed. The President said he had made investigation and had found that the colored clerks had as fair accommodations as the white; but that is not to the purpose. These colored clerks would have just the same right to complain if the comforts provided them were superior to those given their white brothers and sisters. What they have the right to demand at the hands of the Government is exact equality of justice, and segregation is not equality. There will be "friction" and there ought to be friction, if any race, black, yellow or brown, is humiliated and insulted by the Government.

SHOULD TEACHERS BECOME MOTHERS?

THE teapot tempest in the New York Board of Education over those teachers who become mothers goes merrily on. The majority of the Board still refuses to recant.

Even the Mayor of the city has brought his influence to bear upon them. With rare common sense Mayor Mitchel has gone straight to the heart of the matter. In two sentences he has shown the Board the simple, straightforward way out:

> If teachers are permitted to marry and to remain in the teaching service, why should not some arrangement be made to enable them to obtain leave of absence without pay?
>
> Would not a simple rule providing for leave of absence in this case for a suitable period put an end to all this discussion, and instead of working injury to the schools be likely to do them a great deal of good?

There are just two questions which need be answered in solving this problem.

Do mothers make bad teachers?

Do teachers make bad mothers?

If either question is answered in the affirmative, the Board is right in dismissing teachers who become mothers.

Does the Board really believe that either of them should be so answered?

THE SAVINGS OF THE POOR

ELEVEN depositors whose savings had been entrusted to a "private savings bank" on the East Side in New York have committed suicide since the bank was closed, a few weeks ago, by the Banking Department of the State. There were several thousand depositors. They were poor when they were induced by the offer of interest higher than they could get in a public savings bank to give their money to Adolf Mandel, the owner of the bank, and those who survive are poor now. Such is the condition of a vast majority of those who live on the East Side. It is the duty of the state to stand between such citizens and the thieves who would rob them by means of private savings banks.

The State of New York is trying to guard such depositors. The attention of a commission engaged in making an inquiry about banks and the banking laws was directed to the private savings banks by the misfortunes of those who had deposited $2,400,000 in a bank conducted by two men, Siegel and Vogel, in connection with two or three large department stores. The bankruptcy of the stores disclosed the loss of the greater part of the bank deposits. "We believed," said Siegel, "that we had a right to do as we pleased with the money."

And so, because of the commission's report, the bank-

ing laws were amended, and provision for proper regulation of such private banking was made. Since the laws were improved several private banks on the East Side in the great city have been closed, in order that at least a small part of the poor depositors' money might be saved. Mandel's bank is one of these. Mandel himself has been indicted. In another bank of the same kind, conducted by a man named Kobre, there is a deficit of $800,000, due to his losses in stock speculation.

When the owners of such banks have drawn into their hands the savings of the poor, they are tempted to risk the money in speculation. There are some who steal it, some who use it in perilous business ventures. In every state there should be laws designed either to prevent the existence of such banks or to protect depositors by ample guarantees and searching official inspection. Ex-Senator Lorimer's bank and its branches in Chicago were situated where appeal to the poor could be made effectively. The lack of good banking laws and honest inspection, together with political influence that controlled public officers and drew deposits of nearly $1,000,000 from the city's funds, enabled him and his associates to take, and lose, or wrongfully convert to their own use, the savings of the poor who were deceived. For these offenses Lorimer and his partners are now under indictment. But if they should be punished under the law, this will not relieve those who have been robbed, some of whom, we presume, have in their misery, like the eleven depositors in Mandel's bank, put an end to their lives.

It is admitted that the banking laws of Illinois are in need of improvement. There is evidence that such laws as the state now has were not properly administered or enforced with respect to the Lorimer banks and, possibly, other concerns of their kind. States should strive to protect the thrifty and deserving poor not only by the best possible laws relating to savings banks, public or private, but also by means of competent, honest and vigilant executive officers. This is the lesson taught by what has taken place in many cities, and taught with especial force by the Mandel bank's eleven suicides.

THE SEAL CONTROVERSY

IN 1911 the United States, Great Britain, Japan and Russia signed an agreement to stop killing all seals on the high seas for fifteen years. This ought to have settled the "seal controversy" which has been waged in Congress and thruout the nation for the past twenty years. Unfortunately, it has not.

The House Committee on Expenditures in the Department of Commerce has jurisdiction over the seal fisheries on the Pribiloff Islands of Alaska.

A minority of this committee has recently published a report which casts serious reflections on the chairman of the committee, Mr. Rothermel, and on one H. W. Eliott, "a former assistant agent at the seal fisheries, known to have been employed by the lessee of the sealing rights between 1876 and 1890, and dismissed from the service of the Government in 1891," and who ever since has "sought to recover his status by persistently preferring charges before departments of the Government, committees of Congress, and in the public press in this country and Canada, alleging fraud, corruption and negligence on the part of the Government and the lessee of the sealing rights in connection with the taking of seals on the Pribiloff Islands." A careful reading of this minority report should convince any man that Mr. Eliott's charges are without foundation, and we concur in the recommendation that Congress appoint a joint committee from the House and Senate to investigate not only the "charges preferred by Eliott, but Eliott's connection therewith."

When such reputable men as Dr. David Starr Jordan, Dr. C. H. Townsend, Director of the New York Aquarium; Dr. B. W. Evermann, Director of the Museum of the California Academy of Sciences, etc., are stigmatized as "scientific prostitutes," "hogwash experts," etc., it is time to have these charges sifted, and the majority members of the Committee of the House who endorse them compelled to substantiate them or take the consequences.

OUR NATIONAL BIRD

IT is an appositeness rare in this haphazard world that the peculiarly American holiday should be celebrated by the peculiarly American fowl. Franklin wished to have adopted as our national emblem the handsome, dignified and useful turkey instead of the rapacious, filthy and altogether uneatable eagle. But the conservatism of heraldry was too strong for him, so the symbol of the agressive imperialism of Europe became attached to the infant republic.

The turkey is the only contribution that America has made to the fauna of the farm. Mankind has been singularly negligent in utilizing for his own purposes the wealth of the animal kingdom. Out of fifteen thousand species of birds he has domesticated barely a dozen and the New World added but this one to the larder of the Old. Still the acquisition of the turkey is alone sufficient to justify the enterprise of Columbus. All languages have conspired to rob the New World of this honor of originating this bird of ours; the French which calls it the "fowl of India," the German which calls it the "Calicut hen" and the English which calls it the "turkey." But in spite of all temptations to belong to other nations it remains an American. Let us give thanks for the turkey.

THE NEW REPUBLIC

IT has long been observed and deplored that we had in the United States no weeklies like those that are so successful in England such as *The Nation, The Spectator, The New Witness, The New Statesman,* etc. The first number of *The New Republic,* published in New York City, indicates that it will come nearer to this type than any other American periodical. It is under the editorship of Herbert Croly, Walter E. Weyl, Philip Littell, Walter Lippmann, Francis Hackett and Charlotte Rudyard and is announced as "A Journal of Opinion which Seeks to Meet the Challenge of a New Time."

We welcome *The New Republic.* Most of the movements which we understand it will advocate The Independent has long labored for. But we would welcome it if this were not so, for the serious discussion of public affairs by such editors and contributors is a real gain whether they agree with us or not.

THE STORY OF THE WEEK

THE GREAT WAR

November 9—Russians raid Posen border. Turks oppose Russian advance on Erzerum.

November 10—German cruiser "Emden" burnt at Cocos Island by the "Sydney." Karl Lody, a German spy, claiming to be an American, shot in the Tower of London, the first execution in the Tower since 1700.

November 11—Germans gain Dixmude. British gunboat "Niger" sunk by submarine at Deal.

November 12—Russians invade Mazure Lake district of East Prussia. Boer general De Wet defeated.

November 13—Fighting continues along the Yser and the Lys without decisive gains on either side.

November 14—Field Marshal Earl Roberts dies in France. Russians reoccupy Tarnow, fifty miles east of Cracow.

November 15—Russians within fifty miles of Königsberg. Germans advancing from Thorn into Poland.

A Flemish Village

The little town of Dixmude, on the Yser, noted hitherto only for its thriving butter business and its parish church, containing a flamboyant rood loft starred in Baedeker, has suddenly assumed a greater but unenviable importance. The strained attention of the world is concentrated upon it; thousands of men have given their lives for its possession; their bodies choke its canal and are buried in its beet fields. Yet all that made the town desirable has been destroyed by the wave of battle that has swept over it back and forth for more than a month. Church, market and cottages have been demolished, whether by German, French, Belgian or British shells it matters not to those who lived there. It is the irony of war that the powers which gallantly came to the aid of Belgium when the Germans attacked are now, jointly with the Germans, devastating the country.

The fortifications of Antwerp, popularly reputed to be the strongest in Europe, held back the Germans only ten days. This little strip of farmland and pasture, where canals are the only moats and sand dunes the only ramparts, has held them back for a month. On October 14 the Allies took Ypres; they are holding it yet. The Germans have, so far, been frustrated in their efforts to push forward along the coast and gain Dunkirk and Calais, which would give them a chance to use their Zeppelins and submarines against England at short range.

The River Yser, which turns at Dixmude and runs by Nieuport to the sea, has formed the battle line for this month of hard fighting. On the night of November 11 the Germans took Dixmude after an all day battle in which, according to British accounts, the attacking forces lost eighty per cent of their men. But the rest crost the flooded fields on their dead bodies and so gained the town. In gaining it, however, they have not made much headway, for Dixmude is on the right bank of the Yser, and altho the Germans have made desperate efforts to cross the river at this point, they have been unsuccessful.

Both sides have been bringing all available reinforcements into this corner of Flanders. At present, according to British estimates, the Allies have 2,700,000 men in France and Belgium, and the Germans 1,600,000. But the Germans will probably have soon to shift some of their forces to the east to protect Posen and Prussia against the Russians, who have here about 2,400,000 men to the German 1,000,000. The official list of German casualties up to October 14 contains 545,500 names, and in the month since that date they have lost heavily on both frontiers. It is expected that the Japanese, now that they have cleaned the Germans out of China, will send a contingent to France to assist the Allies.

The Campaign in East Prussia

In the Baltic region there is a reversion to the state of affairs that prevailed in the first month of the war. The Russians are for the second time beginning the invasion of East Prussia in the direction of Königsberg, and on the southern border they have again captured Johannisburg, which they took at the beginning of the war, or, according to the Germans, before its declaration. Just north of Johannisburg is the maze of lakes and swamps where the Russians were so disastrously defeated by General von Hindenburg. This district the Germans are said to have fortified with great ingenuity and will presumably

THE BATTLEFIELD IN FLANDERS

In spite of desperate fighting with increased numbers on both sides there has been no material change in the situation for a month. The Germans have taken Dixmude, but have not been able to cross the Yser at this point. The ground held by the Germans is shaded

THE SEAT OF WAR IN EASTERN EUROPE

The Russians have gained ground all along the line from the Baltic Sea to the Carpathian Mountains, as indicated by the shading, and are now within fifty miles of Königsberg and Cracow

be able to offer a stouter resistance than formerly.

The Germans have now been driven completely out of the territory between the Niemen River and their own frontier, and the Russians have advanced to Gumbinnen, about twenty miles inside the boundary of East Prussia, where they won their first victory. Unless they are checked here they will probably do as they did before, that is, invest Königsberg and attempt to advance along the Baltic coast toward Danzig and the Vistula forts that bar the way to Berlin.

The Defense of Thorn

On the eastern frontier the war has gone very differently from that on the western. The Germans captured Belgian and French fortresses one after another without fail until they came up against Verdun. In the east none of the three powers has taken a fortress of any importance since the war began. Now the Russians will have a chance to see what they can do in this way, for they cannot advance much further into Prussia or Austria without overpowering the strongholds that defend the Vistula River, where it enters and where it leaves Russian Poland, that, is Thorn on the north and Cracow on the south. On these two crucial points attention is now focused.

The main line of Prussian defenses against Russia consists of three fortresses along the Vistula—Danzig on the Baltic, Graudenz in the middle, and Thorn on the Polish boundary. According to Petrograd reports, the Germans are collecting all their available forces about Thorn and have resumed the offensive, advancing from this point up the Vistula on both banks. They are reported to have got as far as Vloclavsk, which is about half way to Plock, but whether this is another attempt to reach Warsaw or merely an effort to keep the Russians away from Thorn as long as possible remains to be seen.

At any rate, the Prussians will doubtless defend Thorn to the last extremity, not only because of its strategic importance, but also because of its historical associations. Thorn is the birthplace of the Prussian power which now dominates all Germany and would extend its dominion over Europe and the world. Nearly seven hundred years ago Teutonic Knights, removed from Palestine to Prussia by order of the Pope, were established on the Vistula with a written title from the Prince of Poland to all of the neighboring land that they could conquer from the heathen, a title that they have hitherto had remarkable success in making good. They built their first fortress near Thorn and gave it the poetical if somewhat inappropriate name of Fogelsang. The birdsong fortress was of wood, a blockhouse we might call it, but its present representative consists of nine big forts and seven smaller ones, armed with a thousand guns and put into the best possible condition by forced labor night and day.

South of Thorn, between the Vistula and the Warta rivers, the Russians have advanced to the German frontier and even invaded the province of Posen. A cavalry raid along the south bank of the Warta succeeded in breaking the railroad near Pleschen. By their capture of Kolo the Russians have prevented the Germans from using the Warta as a moat, and the latter are likely to have to withdraw into their own country instead of wintering in Russian Poland, as they had planned. The Russians claim that in its rapid retreat from Warsaw to Kalish the army of General von Hindenburg lost 80,000 men.

The Defense of Cracow

In Galicia the Russians are back again to the lines of their farthest advance two months ago. Following the same plan of operations as before they have not stopped to capture the fortress of Przemysl, but leaving a sufficient force to invest the fortress on all sides they have pushed on westward, following the railroad to Cracow. They have taken Rzeszow and Tarnow, which brings them within about thirty-five miles of Cracow. On the Polish side of the boundary they have driven the Germans back to Chenstochova or beyond, so the way is clear for an attack on Cracow from the north as well as from the east. There is supposed to be an Austrian army or the remains of one somewhere between Przemysl and the Carpathians and whether it will succeed in getting back to Cracow or over the mountains into Hungary is doubtful. Przemysl has been revictualed and prepared for its second siege, tho probably its defenses were badly battered in the first.

The defense of Cracow is said to have been left in the hands of the Austrian general Dankl and the Germans to have withdrawn their forces and artillery for use on their own frontier. The plan of replacing the Austrian officers by Prussians does not seem to have worked well. The armies under the new leadership did no better than before and the resentment of the Austrians at the open contempt manifested for them by the Prussians caused constant dissension between the allied forces so that they even turned their arms against each other in the face of the enemy.

Cracow has stood many a siege before and changed hands so often that it would be hard to tell where

its natural allegiance lies. In 1702 it was taken by the Swedes. In 1795 it was given to Austria in the third partition of Poland. In 1809 it was made part of the Duchy of Warsaw. In 1815 the Congress of Vienna made of it the Republic of Cracow. In the revolution of 1830 it was occupied by Russian troops, in 1848 it was again annexed by Austria and now its fate once more hangs in the balance.

The End of the "Emden"

The German cruiser "Emden," which has been preying on British shipping in Indian waters since the war began, was destroyed on November 10, at Cocos Island, south of Sumatra. When she first arrived at the island the wireless operator sent out the distress signal S O S and this was caught by the Australian cruiser "Sydney," which soon arrived and engaged the "Emden." She struck for the open sea, leaving behind the party that had been landed to cut the cable. These men afterward seized a schooner and set sail for parts unknown. The "Sydney" is a larger, faster and more modern vessel, and with her six-inch guns was able to hit the "Emden," while keeping out of range of her four-inch guns. She soon lost one of her masts and two of her funnels, and steering to the shore she grounded and burnt. The "Emden" had captured twenty-five or thirty British vessels, valued at over $10,000,000 apart from cargoes. Two hundred of the "Emden's" crew were killed.

On October 30 a report came to America from Paris that a first class British battleship had been sunk by a mine. Nothing more was heard of it and it was assumed to be a canard, like many similar rumors of naval disasters. Now, however, it appears to be confirmed by the circumstantial story of eye witnesses in letters to America, altho it is still denied by those in authority. The warship, it appears, was the "Audacious," one of the superdreadnoughts of the latest type and completed only two years ago. She was protected amidships by twelve-inch Krupp armor and carried ten 13½-inch guns. Her length was 596 feet and her displacement 24,000 tons.

On the morning of October 27, before 9 o'clock, the "Audacious" was struck by a torpedo or mine twenty five miles off the north coast of Ireland, near Lough Swilly. A distress signal brought to the rescue the White Star liner "Olympic," the cruiser "Liverpool" and other vessels. The "Olympic" took off all of the 800 officers and men and stood by until the vessel was sunk twelve hours later. The "Olympic" went on to Lough Swilly, where she lay five days, and then went around the south of Ireland to Belfast. Charles M. Schwab, the steel manufacturer, was the only passenger allowed to land at Lough Swilly. It is curious that a secret known to more than a thousand people should have been kept till now. But this is matched by the case of the Japanese warship which was sunk by a Russian mine off Port Arthur, when the outside world knew nothing about it until after the war was over.

The German cruiser "Königsberg," which has been raiding the east African coast, was discovered by the British cruiser "Chatham" hiding six miles up the Rufiji River, opposite Mafia Island, in German East Africa. Not being able to get at her, the English bottled her up by sinking a collier in the river channel.

A German submarine dashed into the Downs on the afternoon of November 11 and torpedoed the British torpedo gunboat "Niger," laying off the Deal dock, in the sight of hundreds of people on vessels and shore. All the crew were saved. The submarine escaped.

The War in Armenia

Altho Turkey did not openly enter the war until November, preparations have been made on both sides from the first. Letters from Bagdad as early as August 9 told that the men in that part of the Turkish empire were being drafted into the army and put into winter clothing for a Russian campaign in

HOW GERMANY TREATS HER WOUNDED PRISONERS

French soldiers in a cheerful hospital ward in Berlin playing checkers with pasteboard and buttons

the fall. Jews and Christians were making desperate efforts to buy exemption from military service, but even the rich found it difficult to raise the ready money necessary.

According to Petrograd reports the Turkish force opposing the Russian invasion consists of the Ninth, Tenth and Eleventh army corps, amounting to some 90,000 men. According to Constantinople reports, the Turkish troops in Armenia number 300,000. As will be seen by reference to the map on another page of this issue, the Russian railroads in Transcaucasia have been planned for strategic purposes. They run to the Turkish and Persian frontiers and there stop, so Russian troops can be brought to any point or shifted along the border, while on the other side of the line there are no railways and few roads of any kind. If peace had prevailed a few years longer it is probable that these railroads would have been extended southward for commercial purposes. In fact, Russia had practically come to an agreement with Germany and Great Britain by which she was to be permitted to extend her railroads from the Caucasus thru Turkish territory and connect with the German railroad to Bagdad, and thru Persian territory to connect with the British railroads from India. But all these plans are now thrown into the melting-pot of the Great War.

The railroad from Baku and Batum divides at Alexandropol, sending one branch southwest to Kars and the other southeast to Erivan. Troops had been gathered at the frontier terminals beyond these towns, and just as soon as the signal was given by the bombardment of the Crimean cities by the Turkish warships, they were marched into Ottoman Armenia with all possible speed. The column which was sent from Erivan toward Lake Van is reported to have made fifty-three miles in thirty hours over difficult roads. At the end of this forced march they encountered the Kurdish cavalry and defeated them. On November 3 they took Bayazid, nineteen miles southwest of Mount Ararat, in spite of a stout resistance by the Turkish garrison.

This is a repetition of the campaign of 1877, for at that time also Bayazid (Bajazet) was the first Turkish fortress captured by the Russians. They approached it then thru Persian territory, because the snow lay too deep in the passes between the Ararats. But the Kurds rallied in such force that the Russian garrison were not able to hold the place, so they surrendered and were afterward massacred by the Kurds.

The expedition sent from Kars to take Erzerum seems to have met with more opposition. The Russians were attacked in the mountains north of Erzerum by Kurdish cavalry and Turkish infantry and artillery under German officers, and were thrown upon the defensive, if not defeated. Erzerum is a city of about 80,000 inhabitants, on the main caravan route from Trebizond to Tabriz, and is well known to some of our readers for the schools for boys and girls and the hospital maintained there by the American Board of Foreign Missions.

The Turks claim to have carried the war into the enemy's country by a raid along the Black Sea coast toward Batum. Petrograd reports that the Armenians are receiving the Russian troops with great rejoicing and flocking to their assistance. A band of Armenian insurgents is said to have undertaken the siege of Van on their own account.

Neutrality in South America

A few days after the recent naval battle off the coast of Chile, when British warships suffered defeat in a contest with a German squadron, the British and French governments addrest to the governments of Ecuador and Colombia a protest against alleged violations of neutrality. While the text of the protest has not been given to the public, it is understood that it was asserted by the complainants that the Germans were assisted by messages from wireless stations in Ecuador and Colombia, and had been permitted to use the Galapagos Islands (which belong to Ecuador) as a base of supplies. The messages, it was said, informed the Germans as to the position and movements of the British ships, and enabled them to assemble their own ships for an attack at the time when their opponents must be at a disadvantage.

The same complainants addrest to our Government notes saying that the protest had been made and asking that our Government "use its influence to insure the strict enforcement of neutrality." This was a suggestion that the United States should admonish Ecuador and Colombia, and it has been regarded as a recognition of a wide application of our Monroe Doctrine. Both countries, by their diplomatic representatives, deny that there has been any violation of neutrality, by wireless communication or otherwise.

Secretary Bryan has directed the diplomatic and consular representatives of the United States in Ecuador and Colombia to make an investigation, not only, it is said, by formal communication with the two governments, but also by personal and independent inquiry. Some expect that this action of our State Department will not be well received, and that the making of an investigation will be resented by the two South American countries.

The Cattle Plague

It is known that in August last there were cases of the foot and mouth disease, or aphthous fever, in southern Michigan, but there was no definite diagnosis until October 15. The disease also appeared in northern Indiana. At the present time the cattle of fourteen states are affected by it to some extent, and the shipment of cattle, sheep or swine to or from those states has been forbidden by the quarantine orders of the national Government. In the East the states affected by these orders are Massachusetts, Rhode Island, Pennsylvania, Maryland, New York and New Jersey. Three infected dairy herds were found last week on Long Island. The authorities agree that for the suppression of the disease it is necessary to prevent shipments of live stock and to kill at once all the cattle in an infected herd. On the 4th the great stock yards in Chicago, where cases case had been found, were closed for the first time in fifty years in order that there might be thoro disinfection. In Chicago were 800 prize cattle, which had been exhibited at the recent National Dairy Show. Among them are animals valued at $20,000 or even $30,000. Nearly one hundred have been attacked by the disease, and the slaughter of all has been ordered. The owners have asked the courts for a restraining injunction. The value of these cattle has been $2,000,000.

The disease is highly infectious and it has spread rapidly. It had not appeared in this country since 1908, when it was suppress with but little loss. This year the loss must be great. As might have been expected, the price of beef has risen. The Department of Agriculture has 150 inspectors at work tracing shipments and slaughtering herds in which the disease has been found. The health authorities of New York have ordered the pasteurization of all milk brought to the city.

DIGGING OUT BELGIUM

German engineers at work excavating a tunnel on one of the main railroad lines of Belgium, which was blown up in the attempt to check the German advance

Race Segregation at Washington

Delegates representing the National Independent Equal Rights League, an organization of negro citizens, called at the White House last week to protest against segregation orders, which separate the negro employees from their white associates in two or three executive departments at Washington. Their spokesman was William Monroe Trotter, of Boston, the editor of a newspaper devoted to the interests of his race. His attitude and remarks were so offensive that he was sharply rebuked by the President, who told the delegates that if he should ever consent to see them again they must have another spokesman. Before the interview came to a disagreeable termination, Mr. Wilson said he had made inquiry about the segregation orders and was convinced that their sole purpose was to prevent race friction and promote the comfort of all. He admired the progress made by the colored people and he desired to aid them.

Mr. Trotter said they were not asking for aid or charity, but for justice and equal rights. He asserted that the segregation movement in the Treasury Department and Post-Office Department, where whites and negroes had worked side by side without any separation for fifty years, had been due to the race antipathies of Secretary McAdoo, Postmaster-General Burleson, and Comptroller Williams, Southern men. He virtually predicted the opposition of all negroes at the polls to the Democratic party. This kind of argument, as well as his manner, his questions, and the cross-examination to which he sought to subject the President was emphatically disapproved by Mr. Wilson, who said that never before, since he entered the White House, had he been addrest in this way.

The Division in Mexico

Having appointed Gutierrez Provisional President of Mexico, the Aguascalientes convention ordered Carranza to retire on or before the 10th. Declining to do this, he recalled his generals from the convention and by proclamation gave warning that the convention's orders must not be obeyed. Whereupon Gutierrez proclaimed himself President and appointed a Cabinet, naming two or three of Carranza's generals for places in it. Then Carranza removed these generals and others from their military offices because they would not cancel their signed agreement to honor the convention's orders. Afterward, however, they regained his favor. To the convention he said he would not yield unless the new President should assume real control of Villa's army and division. Already there was fighting. Carranza's men were reported to have been whipped at Leon and near Torreon.

Gonzales, Blanco and other generals supporting Carranza telegraphed to him that "patriotic necessity" required him to resign. They also urged Gutierrez to send Villa to some foreign country on an official mission, promising that they would induce Carranza also to leave Mexico. At about the same time, however, Villa handed his resignation to Gutierrez, who accepted it, but at once made him commander of all the troops who were not loyal to Carranza. Hearing of this, Carranza's generals denounced it as a trick and returned to his support. Carranza declared that Gutierrez was merely Villa's tool and gave notice of a beginning of hostilities. He would have no more dealings, he said, with Gutierrez or the convention. Gonzales remarked that he was ready to fight "Villa and his bandits."

Villa occupied San Luis Potosi, thus cutting off the Carranza forces in the northeast, and ordered an attack upon Tampico. Carranza denounced him as an outlaw and declared that the convention was organized rebellion. Unexpectedly, however, on the 14th, Gonzales and Gutierrez agreed upon a truce of six days, and further efforts for peace were made. Committees were sent to both Gutierrez and Carranza. On the following day Gutierrez demanded a response from Carranza within twenty-four hours, and there were indications that the truce might be broken.

NEGLECT OF DUTY

The New York Board of Education has dismissed for "neglect of duty" married teachers who absented themselves for the purpose of bearing children. See editorial pages for comment

Withdrawing from Vera Cruz

For a long time our Government had been seeking those guarantees without which it could not withdraw the troops from Vera Cruz. Carranza at last reluctantly gave nearly all that was required, and a satisfactory response was obtained from the Aguascalientes convention. On the 13th, Secretary Bryan announced that the troops would leave Vera Cruz on the 23d. Guarantees concerning taxes and duties were satisfactory, he said, and all the persons for whose personal safety our Government was responsible had left the city. He thus referred to refugees, and especially to about sixty alien priests and nuns. These, he remarked, were on their way to this country. It appears, however, that they were still in Vera Cruz, to which they had fled to escape brutal persecution, and where they were seeking to conceal their identity by various disguises. A transport has been ordered from Galveston for them and other refugees, for whom no guarantee has been given.

There are in Vera Cruz about 5800 United States marines and soldiers. Our forces have collected $2,000,000 in taxes and duties, and it cannot now be foreseen to what Government the money will be delivered. It may be Carranza's, or the power may be held by Gutierrez and Villa. Holland objects to the withdrawal, and France claims a lien on the duties which have been paid.

Truce agreements are not effective on the northern border or with Zapata's forces. Maytorena has been dropping shells in Naco, where Hill's Carranzistas are besieged, and there has been continuous fighting in the suburbs of the capital.

WHERE DO WE STAND?

A PLEA FOR CONSTRUCTIVE NEUTRALITY

BY GEORGE C. HOLT, LL. D.

For many years Judge Holt as a member of the federal judiciary has had occasion to pass upon questions of international importance. The following article voices an opinion that is beginning to become insistent, that the United States owes it to itself as well as to the other neutral nations to make protest against the violations of the Hague Conventions constantly being made by the belligerent nations.—THE EDITOR.

THE duties of a neutral nation toward belligerents are governed by the simple rule that it is the duty of the neutral nation to do nothing which will help either party. These duties are regulated in detail by general provisions of international law; but they are all based on the simple idea of giving no aid to either nation at war.

Extreme views appear to have arisen in the present war in respect to the obligations of the United States as a neutral nation. The President early in the war, soon after the usual proclamation of neutrality, issued an address urging our people to abstain from indulging in discussions or expressing opinions about the merits of the war, on the ground that we were a neutral nation and as such bound to abstain from taking part in the controversies between the parties engaged in hostilities. The advice in itself was wise and useful. So large a number of our people are of foreign birth or origin, or have such marked prepossessions in favor of one or more of the nations engaged in this contest, that general discussions of the points involved by individuals, particularly in public places, would naturally tend to heat and passion, and probably, in frequent instances, to disturbances of the public peace. It is well, therefore, for every American to avoid such discussions; but, if they are indulged in, they do not violate any neutral duty. They do not aid or affect in any way any country at war; and the reason for our abstaining from them is grounded entirely upon the desirability of preserving domestic peace and quiet among ourselves.

NEUTRALITY IN THE HAGUE CONVENTION

Another inference appears to have been drawn from our supposed duty as neutrals; and that is that we are obliged to keep absolute silence and make no protest when the provisions of the Hague Convention are violated by either of the parties engaged in the war. The Hague Convention was a solemn treaty between all the parties to it. Those parties included all the nations engaged in this war and and many more nations not engaged in this war, including the United States. Many of the provisions of the Hague Convention have been violated in this war. Such violations alone, even if no injury had occurred from them to the United States, would make it the right and the duty of this country to protest against them at least. It is an affront to any country which has entered into any treaty to have its provisions overridden and disregarded by the other party to it. But when a treaty entered into for the purpose of safeguarding important interests is violated by one of of the parties to it, and injury to the interests of the other party results, the injured nation that sits in silence and makes no protest is regardless of its own character and dignity. This is especially so in the case of the violation of such a treaty as the Hague Convention. That was no petty bargain between two states relating to some trivial interest peculiar to them alone, as many treaties are. It was a world-wide agreement deliberately entered into by almost all existing nations, with the object of mitigating the evils of war to combatants and of diminishing the inconveniences of war to non-combatants and neutrals. The deliberate violation of any of its provisions by any country is an affront and a wrong to all the other signatory powers.

BOMBS THAT VIOLATE THE TREATY

Take, for instance, the case of bombarding cities situated far from any other military operations, with bombs from aeroplanes. The Hague Convention contains the following general provision concerning bombardments:

ART. XXV. The attack or bombardment, by whatever means, of towns, villages, dwellings or buildings which are undefended is prohibited.

This provision was contained in the first Hague Convention of 1899, with the exception of the words "by whatever means." The original provision was amended by inserting those words, after the Convention had had under consideration a provision specifically prohibiting the dropping of bombs from balloons or aeroplanes on undefended places, and it was clearly understood by the members of the Conference especially to cover the case of bombs dropt from aeroplanes on undefended cities, as appears in the debates of the Convention.

This provision of this treaty has been systematically violated thruout the war. Bombs from aeroplanes have been repeatedly dropt on Antwerp, Paris and other cities and places, when no other military operations were taking place near them. These bombs have killed peaceful citizens, including women and children, and have caused great destruction of buildings and property, but have subserved no military object whatever. There are daily threats that they are soon to be dropt on London and on all cities within the countries at war, whenever they can be reached. The uselessness of such acts is equaled only by their wickedness.

But it will be said that the United States has no interest in preventing such proceedings. There were many Americans in Antwerp. There are many in Paris and London, and some probably remain in most of the cities in Europe. Do we owe them no duty of protection, or, at least, of protest? The Hague treaty was made for the express purpose of protecting them from just this danger, and the Government of the United States is derelict in its duty if it sits pusilanimously silent and makes no protest against so flagrant a violation of the treaty by which it is bound and in consequence of which it has a right and a duty to demand that every other party to it shall be also bound.

THE OUTRAGE OF FLOATING MINES

The use which has been made in this war of floating contact mines is another flagrant violation of the Hague treaty. An attempt was made at the Hague Convention to abolish the use of sea mines in warfare, altogether. This was resisted by the representatives of many of the countries attending the Conference, and especially by the weaker nations. Undoubtedly, much may be said in favor of the right of a country to defend its coast and harbors from attack by anchored mines. But anchored mines are very liable to be detached from their anchorage by the action of storms, tides and currents, and, as a result, to become floating mines. It was asserted in the debates of the Hague Convention that anchored mines could be so constructed as to become harmless if detached from their anchorage, and the Hague Convention finally adopted the following provisions on the subject of automatic contact mines:

ART. I. It is forbidden: 1. To lay unanchored contact mines except when they are so constructed as to become

harmless one hour at most after the person who laid them ceases to control them." To lay unanchored automatic contact mines which do not become harmless as soon as they have broken loose from their moorings. . . .

ART. II. It is forbidden to lay automatic contact mines off the coast and ports of the enemy, with the sole object of intercepting commercial shipping.

ART. III. When anchored automatic contact mines are employed, every possible precaution must be taken for the security of peaceful shipping.

The section contains further provisions in detail aiming to prevent the obvious dangers to neutral vessels from the use of contact mines.

In this war automatic contact mines have been found floating in all parts of the North Sea and of the Adriatic Sea, and recently in the sea about the north coast of Ireland. They were either originally floating mines, or have become such after being anchored. If originally floating mines, they were not constructed so as to become harmless within an hour after the person who laid them ceased to control them; if originally anchored mines which have broken loose, they were not constructed so as to become harmless after breaking loose. The probability is that they were never anchored, but were floating contact mines, constructed to retain their explosive power indefinitely, and scattered indiscriminately over the sea, usually by vessels purporting to be fishing vessels or trading vessels under neutral flags. They have destroyed a much larger number of passenger and freight steamers and fishing vessels than of war vessels. Hundreds of neutral lives, including some of the citizens of the United States, and millions of dollars worth of neutral property, including considerable property owned by citizens of the United States, invested in ships and cargoes, have been destroyed by these instruments of modern warfare. And, in the face of this flagrant violation of our treaty rights, the Government of this country sits in silence.

Here is a treaty which upholds the fundamental rights of neutral commerce to the free use of the open ocean, the violation of which tends to drive all neutral trade from the sea. It was in defense of free trade and sailors' rights that this country in 1812, then a puny and feeble nation, went to war with the greatest maritime power in the world. But the restrictions on American free trade caused by the English Orders in Council and Napoleon's Berlin and Milan decrees were trivial in comparison with this new system of making war which makes it dangerous for American commerce to venture on large and important parts of the high seas; and the wrongs to American seamen caused by their impressment on British ships were insignificant in comparison with the danger to their life to which they are constantly exposed by floating mines, unless the American ships in which he sails abandon their right to trade in all parts of the world.

THE INJURY TO BELGIUM

But the gravest infringement of the Hague Convention which has taken place in this war is the violation of the neutrality of Belgium. The neutrality of Belgium was originally specifically guaranteed by a treaty between the principal powers now at war, but to which the United States was not a party. But it is also guaranteed by the following general provisions of the Hague Convention, to which the United States is a party:

The territory of neutral powers is inviolable.

Belligerents are forbidden to move troops or convoys of either munitions of war or supplies across the territory of a neutral power.

The fact of a neutral power resisting, even by force, attempts to violate its neutrality cannot be regarded as a hostile act.

There never has been a more deliberate, treacherous and shameful violation of a treaty than the treatment of Belgium in this war. Here was a little nation surrounded by great ones. Before its neutralization in 1830 it had been repeatedly ravaged by wars waged between its powerful neighbors. More than eighty years ago it entered into a treaty of neutrality with all of them. It has since lived in peace, relying on their joint protection. Since the treaty its neutral rights have been always respected by all of them. Louis Napoleon, Cavour, Bismarck and every statesman and government in Europe until this year always respected them. Under the protection of this treaty Belgium had grown rich and prosperous. Its prolific soil was brought up to the highest point of cultivation by an industrious peasantry; it produced every form of skilful manufacture; it developed great artists and authors; it was a model nation of happy, cultivated and contented people. This it was three months ago. Today it is a ruin. Its fields are ravaged, its villages burnt, its cities abandoned, its prosperity destroyed and those of its people who are left alive are beggared and exiled outcasts living on the charity of strangers. The treatment of Belgium in this war is the most monstrous crime committed in modern times.

WHERE DO WE STAND?

But it is claimed that this country has no interest in the matter, and that the obligations of neutrality compel us to be silent in the presence of such an atrocious iniquity. It would be sufficient to say that every nation has a direct interest of its own in maintaining the principle of neutrality. There is a war usually going on somewhere in the world, and all the nations not engaged in it are neutral nations. If it is to become a rule of war that the territory of neutral nations can be invaded at the will of any belligerent, the foundation of the principle of the sovereignty of nations is destroyed. Every nation, therefore, has a direct and transcendent interest in maintaining the provisions of the Hague Convention concerning neutrality. But it is not true that the United States has suffered no direct injury from the violation of the neutrality of Belgium; many American citizens lived or were staying in the beautiful old towns and cities of that charming country and have been driven out or subjected to the disturbances and inconveniences of the war. Moreover, immense pecuniary calls are made upon us to relieve the misery caused by this infraction of the treaty. We are called on to feed the people of Belgium, starving because of the ruin created by this war. At every hand appeals are made to us for food, clothing, money and necessities of every kind for the famished victims of this gigantic crime. It is recently announced that at least $5,000,000 worth of food a month must be furnished them thru the winter, and that it can only come from the United States. We are ready, in compassion to the victims, to furnish it; but the people of this country have a right to insist that, if we have to support the victims of this barbarity, our Government should protest against the illegal acts of those who have been guilty of it.

There are many other provisions of the Hague Convention which have been violated in this war. One of them provides that the inhabitants of a territory which has not been occupied who take up arms to resist, without having time to organize, shall be treated as belligerents. In fact, such defenders of their homes when taken have generally been summarily executed. Another prohibits requiring prisoners to labor in connection with military operations. They have frequently been forced to work digging trenches. Another requires that in sieges or bombardments all necessary steps must be taken to spare, as far as possible, buildings dedicated to religion, art, science or charitable purposes, and historic monuments. The destruction of the University of Louvain and the bombardment of Rheims Cathedral

show what attention has been given to this requirement. Another prohibits pillage, but it has been almost universal. Another provides that a spy, even when taken in the act, shall not be punished without trial, but they have frequently been summarily shot immediately after arrest. Another provides that family honor and rights, the lives of persons, and private property must be respected, but very often they have been attacked. Another provides that no contributions shall be levied except for the actual needs of the army or the administration of the conquered territory. Enormous fines far in excess of any military or administrative requirements have been imposed on many cities and towns. In short, the Hague treaty, like the original Belgian treaty, has been cast into the waste-basket like a scrap of paper.

But if there had never been any Hague treaty, this Government and all neutral governments would have a right to protest against the violation of the fundamental obligations of belligerents to avoid unnecessary and useless injury to non-combatants and neutrals. The rules of the Hague Convention are not new; they have been established by a slow development, during modern times, as measures for diminishing the ferocity of war, and have gradually become established rules of war among civilized nations. They are stated in all treatises on international law as settled rules having the force of law in the case of hostilities between civilized states. In this war, for the first time in a hundred years, these great rules have been deliberately disregarded, not only by licentious and brutal soldiers of inferior rank, but by the leaders of great armies, and the responsible administrators of great states.

WE MUST BREAK SILENCE!

It is time that the Government and the people of this country rose to an appreciation of the gravity of the occasion. This is a war for the freedom of the world. Our future is involved. It is time that the American people broke its silence and exprest its sympathy with those that are fighting against tyrants in the great cause of freedom. It has not been always so. We have never taken part in foreign revolutions, in accordance with our traditional policy of no entanglements in European affairs; but we have never hesitated to express our sympathy with men anywhere struggling to be free. In the French Revolution, in the revolt of the South American countries against Spain, in the struggles of Poland against the tyrants who partitioned her, in the revolution of Greece against the despotism of Turkey, in the struggle of Hungary under Kossuth against the power of Austria, in the revolt of all Europe in 1848, in the long agony of Cuba, in all times and situations the American people have never hesitated to give hearty expression to their deep sympathy with peoples struggling against oppression.

Shall we give none to gallant Belgium, sorely wounded and sinking, but fighting still?

NEW YORK'S SOCIALIST CONGRESSMAN

MEYER LONDON, WHO DEFEATED HENRY M. GOLDFOGLE IN A STRONG TAMMANY DISTRICT AND THUS BECAME THE FIRST SOCIALIST FROM AN EASTERN STATE TO ENTER CONGRESS

THE REPRESENTATIVE WITH A MILLION CONSTITUENTS

THE FIRST SOCIALIST TO BE ELECTED TO CONGRESS FROM THE EAST

LAST Sunday afternoon twelve thousand people assembled in Madison Square Garden, New York City They filled every chair in the vast amphitheater. They packed three galleries. They paid from fifteen to twenty-five cents to sit in the galleries; they paid fifty cents for a chair on the floor. They did not assemble to listen to some great Democratic, Republican or Progressive idol of the people. Indeed, there is not a statesman in any of the three great parties who could fill Madison Square Garden if admission was charged. They assembled to do honor to one Meyer London, the first Socialist in the East, and the only one in the country, with the exception of Victor Berger, of Milwaukee, to be elected to the United States Congress.

Who is the man who could accomplish this feat? Meyer London is a Jew, born in Poland forty-two years ago, raised in southern Russia, emigrated to America at eighteen, a lawyer by profession, an idealist and revolutionist by faith, a Socialist by party, self-educated and self-made, a moral and intellectual leader.

London's father emigrated to New York when the boy was but twelve years old and started on the East Side a revolutionary paper published in the Yiddish language. Meyer was left in school in Russia. At fifteen years of age he was supporting himself by tutoring his less studious classmates. At that time Russia had just promulgated her infamous laws discriminating against Jewish students and forbidding all save a small proportion of them any higher education. This persecution made him a revolutionist. At the same time he came in touch with the Zionist movement, which still holds his intense interest and support.

He determined to flee Russia and come to the United States, which he had always looked upon as a haven of refuge for the oppressed. When he arrived in New York he entered his father's printing shop, but the business was poor and he took up the cigarmaker's trade. After having made a hundred cigars he succeeded in obtaining a position in the circulating library connected with the Educational Alliance, which fortunately required only four hours a day of his time. The rest of his waking hours he devoted unswervingly to study. He learned English. He read everything he could lay his hands on in English and American political history. "Knowledge," he says, "is the only thing in life that counts." From that day to this London has given his entire time to but two things: to study and the betterment of the working classes. He eschews all recreation and all social life. In order to teach himself to become a public speaker he studied the great English and American orators such as Burke, Pitt, Henry and Webster, but he preferred the simple and direct style of Wendell Phillips. Today he never prepares his speeches beforehand but trusts to the inspiration of his audience.

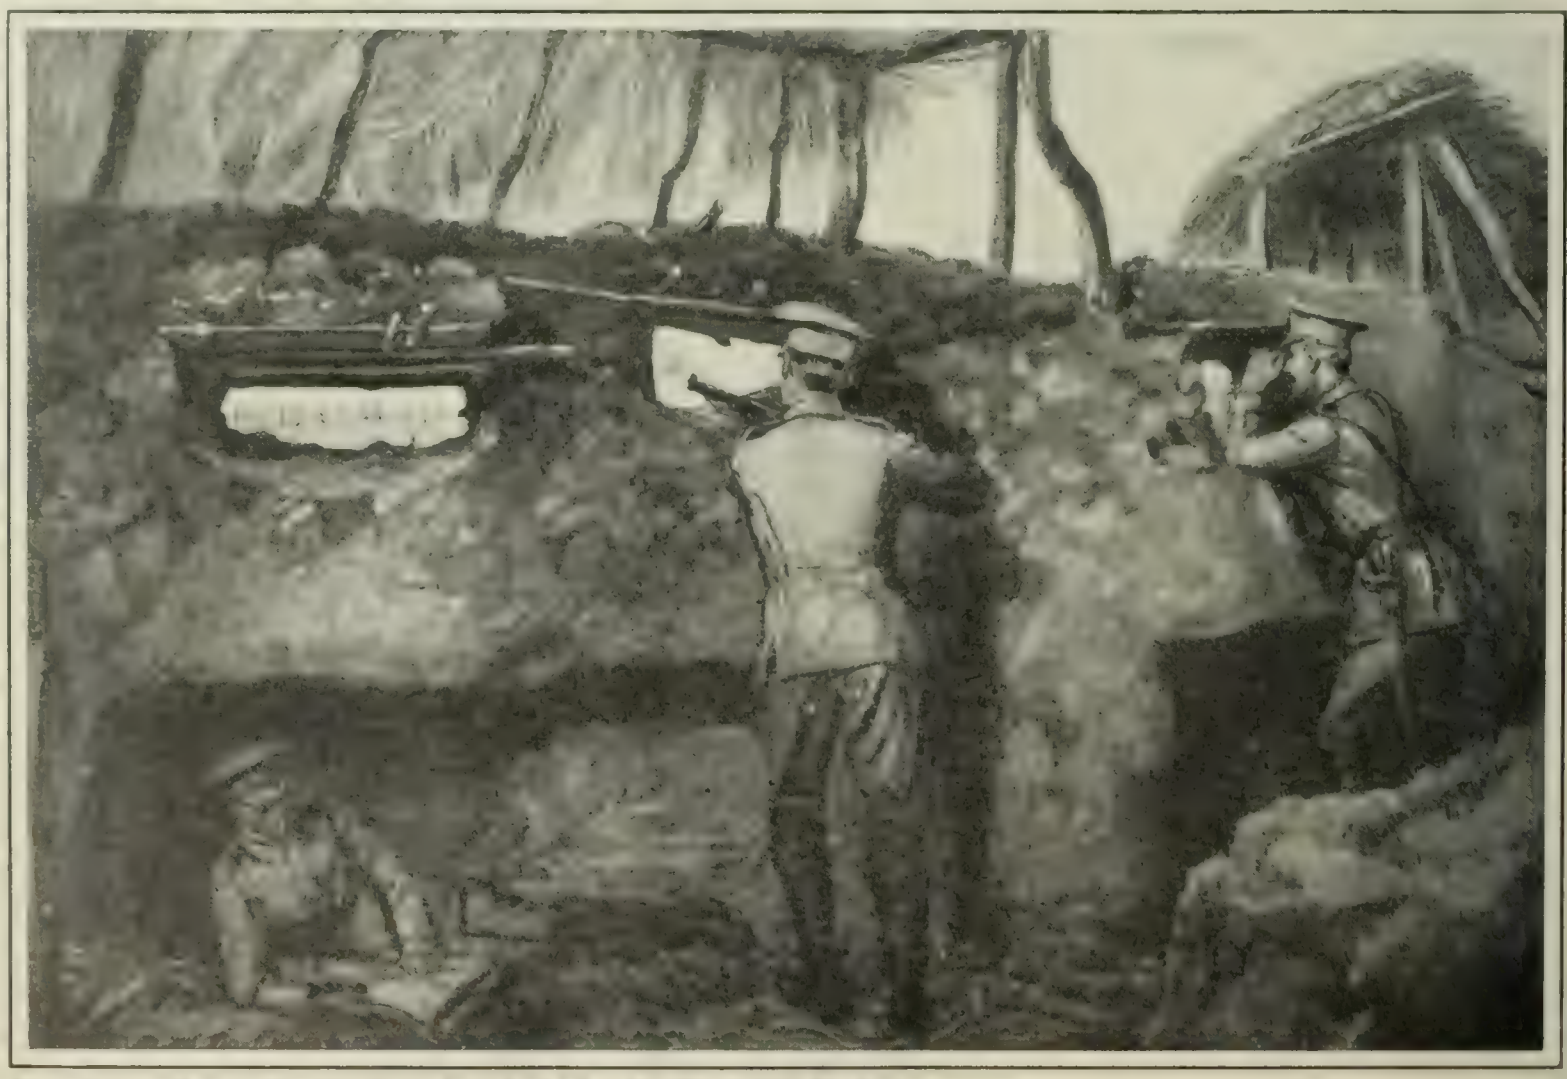
In 1898 he was admitted to the bar. His first case was a strike case and ever since his chief practise has been among labor unions. About 1894 he became active in the Socialist party, but with characteristic thoroness he made a special study of orthodox political economy so as to be able to confute anti-socialistic arguments with more understanding. He holds that the chief problem of socialism today is the "abolition of wage slavery," yet he does not think that we shall have to wait until the Socialist party captures the nation before the social revolution begins. The social revolution, indeed, is already here. Not only the Socialist party but the church and the schools and all other forces of progress are destined to lend their aid in its establishment.

As the sole Socialist Member of Congress he is not so foolish as to expect to pass any socialistic legislation for the nation. But he will use the halls of Congress as a forum for voicing the sentiments of the peaceful revolution. These six causes he will ardently champion: First, international peace; second, laws for the protection of child labor; third, woman suffrage; fourth, old age pensions; fifth, the socialization of monopolized industries; and sixth, curtailment of the power of the Supreme Court to declare laws unconstitutional. Surely most of these are already accepted by the people at large and if this is socialism's constructive program, the country need have little to fear from it.

But Mr. London's chief work up to the present has been of a legal and economic rather than political nature. There is probably no man in the country who has done more to build up, lead and advise labor organizations than he. He is now attorney for the International Ladies' Garment Workers' Union and the International Furriers' Union and a number of local unions. He was the man who more than any one else persuaded the Garment Workers of New York in 1910 just after the great strike to make a collective agreement with the Manufacturers' Association. The union preferred to make individual agreements with each separate manufacturer, but Mr. London persuaded them that a strong union and a strong employers' association working in coöperation were better for the industry than the prevailing method of individual bargaining. This resulted in the famous Peace Protocol in the trade, the longest step yet taken in the United States toward the goal of industrial peace, ranking in importance with the Compulsory Arbitration Law of New Zealand and the Compulsory Investigations Act of Canada.

While Mr. London has acquired all the arts of a popular pleader and leader he is in no sense a demagog who follows and fawns on the majority. On three separate occasions he has been mobbed by workingmen whose policies he has opposed and once he resigned as attorney for a union which he thought was following false gods.

Mr. London resides on the East Side, with his wife and small daughter. He has always lived there except for one year when he moved uptown near Central Park so as to enjoy his one recreation, skating. But as he only found two occasions during the entire year to indulge in this sport he moved back again to the East Side. It was a pleasure last Sunday to watch the beaming eyes of his wife and little daughter when the crowd at Madison Square Garden cheered him for fifteen minutes. As for London, he said to the throngs waving the crimson flags before him, "This is a big demonstration, a sort of noise-making affair, but mere noise does not make for victory or for practical accomplishment. We must stop noise making if we want to do things."



If each political party was represented in Congress in proportion to its voting strength the Socialists who polled at the last election nearly one million votes would have twenty-nine representatives in Congress. Instead they have only one. Mr. London therefore represents a larger constituency than any other man in the House of Representatives. His undoubted ability and absolute integrity of character will certainly secure for him the respect of his colleagues and the country at large.

THE STRATEGIC IMPORTANCE OF TURKEY

HOW THE RUSSIANS FROM THE NORTH AND BRITISH FROM THE SOUTH ARE CLOSING IN UPON THE TURKISH EMPIRE

THE entrance of Turkey into the war greatly complicates the problem because it introduces a number of new factors of unknown value. Eager as Germany has been to get Turkey involved in the conflict, it is yet questionable whether she will derive any advantage from her new ally. Of course there is the immediate gain of a quarter or half a million men and a navy of ten vessels, both under German officers, and also the possibility that the Sultan as Defender of the Faithful may be able to set the Moslem world ablaze from Morocco to India. But on the other hand, the act of Turkey in taking the part of Germany and Austria-Hungary increases the likelihood that Italy and Greece will take the other side. Turkey is by no means reconciled to the seizure of Tripoli by Italy and feels still more keenly the loss of the Aegean isles to Greece. But Italy, Servia and Greece have conflicting interests in Albania. Rumania, which was formerly pro-Austrian and anti-Russian now inclines to the other side and hopes by joining the Allies she may share the spoils of victory and gain the Austro-Hungarian territory inhabited by Rumanians. The recent confiscation by the Rumanian Government of the trains carrying German arms and ammunition to Constantinople over the Rumanian railroads is virtually an act of war. Bulgaria, entirely surrounded by enemies, is striving desperately to maintain her neutrality.

The importance of Turkey is due to its strategic position. It lies in the middle of the Eurasian continent and its frontiers are fortified by nature. Seas and gulfs, mountains and deserts encircle Turkey in Asia. Europe is the vulnerable side. Ever since the sixteenth century, when the Turks were driven back from the gates of Vienna, they have continuously lost ground on the western side of the Bosphorus. The Russians in 1878 would have captured Constantinople if England had not interposed. The Bulgars came near doing it two years ago.

Cyprus was the price which Turkey paid in 1878 for English interposition in her behalf. Lord Beaconsfield came back from the Congress of Berlin announcing that he had secured "peace with honor." The propriety of the phrase was questioned later when it was disclosed that before he went to Berlin he had made secret treaties with both the adversaries; on the one hand ceding to Russia the coveted port of Batum, now the center of the Black Sea oil trade, and on the other obtaining the right of occupying Cyprus on the promise that Great Britain would guarantee to Turkey her Asiatic possessions against all invaders. Great Britain has occupied Cyprus ever since and has this month annexed the island just at the time when Russia began the invasion of Asiatic Turkey from Batum.

That "politics makes strange bedfellows" was never more amusingly illustrated than by comparing the attitude of the English in the former Russo-Turkish war with their present position. Referring to the *History of Our Own Times* by the late Justin McCarthy, once a member of our editorial staff, we can see how it struck a contemporary to have Russia approach Constantinople thirty-six years ago:

> Then came a report that the Russians . . . were pushing on toward Constantinople with the intention of occupying the Turkish capital. A cry of alarm and indignation broke out in London. One memorable night a sudden report reached the House of Commons that the Russians were actually in the suburbs of Constantinople. The House for a time almost lost its head. The lobbies, the corridors, St. Stephen's Hall, the great Westminster Hall itself, and Palace Yard beyond it, became filled with wildly excited and tumultuous crowds. If the clamor of the streets at that moment had been the voice of England, nothing could have prevented a declaration of war against Russia. Happily, however, it was proved that the rumor of Russian advance was unfounded.

Popular feeling found expression in the "Jingo" song which was the musical equivalent of "It's a Long Way to Tipperary." The Jingo spirit prevailed and a British fleet was dispatched to the Dardanelles to check the victorious Russians just about to reach the goal of their age-long ambitions, Tsargrad.

Times have changed and now the rumor that Russia had reached Constantinople would set London wild with joy instead of anger.

A queer idea one would have of the war if he got his information from Blue Books and White Papers and such official documents. He would be puzzled to understand how there can be talk of Turkish troops invading Egypt when Egypt is a part of the Turkish empire. If he refers to the *Statesman's Yearbook* for authoritative information he will find at the very end of the chapter on Egypt a mention of the fact that His Majesty, King George, maintains a consul general resident in Cairo, but so he does in New York City, and there is nothing to show that this gentleman, whose name is Kitchener and who hails from Khartum, has anything particular to do with the government of Egypt. Who would suppose from this that Egypt, which belongs to the Sultan, is ruled from London, while Canada, which belongs to King George, is not. Great Britain has many times promised to evacuate Egypt, but fortunately for Egypt as well as for the rest of the world she has never fulfilled her promise. The British administration has brought peace and prosperity to the land such as its downtrodden people have not enjoyed for thousands of years, if ever they did. To fall again under the rule of the Turk would be worse than a recurrence of the ten plagues.

But it is not difficult to improve upon Mohammedan administration. Even the Russians can do it and have done it. Those parts of Asiatic Turkey, Persia and Turkestan which Russia has acquired are also thriving, altho the government is less efficient and less regardful of the interests of the people than the English. The Armenians say that they would like to have their country come under British rule, but since this is out of the question, they are glad to have the Russians come in and take possession.

Turkey can be invaded by land from three points only; from the east thru Persia, from the south thru Egypt, or from the north thru the neck of land between the Black Sea and the Caspian. But this way has always been barred by the gigantic rampart of the Caucasus Mountains which stretch from sea to sea in a chain unbroken except by two passes; one in the middle leading to Tiflis, the other on the Caspian shore leading to Baku. For more than two thousand years this was the barrier between the fecund nomads of the northern steppes and the dwellers on the fertile plains of the Araxes and the Euphrates. This was the limit of the civilized empires of the south, the Greek, and the Roman, the Persian and the Sassanian. Always the peoples of AsiaMinor lived in dread of an invasion of the northern barbarians. Once let the Scythians or Tartars break thru the barrier, thought they, and the land will be ruined. They did break thru and the land was ruined. And it is ruined yet. The mongoloid empire of the Ottoman has for five hundred years blasted the civilization of Anatolia and amid the ruins of the imperial cities of the past a

sparse and poverty-stricken peasantry labor today in constant fear lest their rulers rob them of their living and their lives. It is not strange then that they look for rescue to the same quarter which their ancestors held most in dread, the people to the north of the Caucasus. We are told that the Armenians are welcoming the Russian invaders and we may believe it, for so they have done before. In 1828 the Russians under Paskevitch, following the same route they are taking now, got as far as Erzerum, but by the treaty of Adrianople this part of Armenia was given back to the Turks. Multitudes of the Armenians, however, emigrated into the Russian territory rather than remain under Turkish or Persian rule, and no doubt they have gained by their change of government.

Of this treaty of Adrianople a curious story is told; that in the negotiations the Russians demanded and the Turks conceded the port of Batum on the Black Sea, the same that the Turks have recently bombarded. The treaty as first drafted provided accordingly that the Russian boundary should be made the Tchorok River, which runs into the Black Sea to the south of Batum. But somehow when the document came to be engrossed it read "Tcholok" instead of Tchorok, and in this form was signed and ratified. We may imagine the disgust of the Russian Government when it was discovered that their new territory extended no further down the coast than the Tcholok, an insignificant stream on the nigh side of Batum. So the Russians had to wait for fifty years before they secured a decent port, meanwhile putting up with Poti, where the harbor bar shut out boats drawing over four feet of water; no fit place for a railroad terminal, surely.

In 1854 the Russians tried it again, advancing by same old route thru the passes of the Caucasus to Kars and Erzerum. But the arrival of an English officer, Colonel Williams, at Kars, inspired the disheartened garrison to an heroic defense, and it was only after inflicting terrible slaughter upon the besiegers that Kars was taken. But the capture of Sebastopol by the combined British, French and Turkish troops compelled Russia to accede to the terms dictated by the Allies, and this meant the relinquishment of her Armenian conquests.

No defeat, no power or combination of powers, can check the Russian advance. Like a mighty glacier pushed by the weight of an ever-increasing neve the Russian empire moves steadily southward toward the sea, year after year, century ofter century. A thousand years ago the Russian invasion of Persia and Turkey began. The morning paper reports progress in the same direction. What Russia got but failed to hold in 1828 and 1854 she tried for again in 1877 and with better success. This time her army was led into Armenia by an Armenian general, Loris Melikoff. Kars was taken on November 17 and Erzerum in the following February. This time Kars was kept and so was Batum.

This Transcaucasian territory proved a prize package to Russia. Out of a patch of ground ten miles square has flowed wealth by the millions and still flows. From Baku on the Caspian has come a fifth of the world's supply of petroleum. This is more than Mexico and second only to the United States. Pumped to Batum on the Black Sea by a three hundred mile pipe line, it is shipped all over Europe and to the Far East until it meets the westward flow of Standard Oil. Every year some invention brings a new demand upon the fountains of liquid fuel that are scattered too scantily about the globe to suit our modern needs. If by any chance the Turkish forces in Armenia should not retire as we naturally expect, but instead should advance and take Baku, it would be a greater blow to the Allies than the loss of an army corps. For it is petroleum in its protean forms that has speeded up the present war beyond its predecessors. It is from these subterranean tanks of stored sunshine that the power has been drawn which drives the swift cruiser and the submarine on the sea, the armored automobile and the truck over the land, the aeroplane and dirigible thru the air. But now we may expect the campaign to slow down, on the part of Germany at least, for the Galician oil fields are in the hands of the Russians and Rumania has prohibited exportation.

A few months before the war the British Government took steps to provide a supply of fuel oil for the fleet by buying a controlling interest in the fields of western Persia above the head of the Persian Gulf. This wise precaution was denounced and ridiculed by the Opposition, for even the naval and military authorities failed to realize that petroleum was necessary to the modern man-of-war

THE SEAT OF WAR BETWEEN RUSSIA AND TURKEY

On the last days of November the Russian troops that had been massed at the railroad terminals of Transcaucasia were pushed across the border in the direction of Trebizond, Erzerum and Van. In Persia, on the other side of Mount Ararat, the Russians have for several years been increasing their garrison at Tabriz and gradually taking possession of the whole province. The Russian advance is marked by shading

and that it could only be obtained in a few places. In an article published in an English review shortly before the war an army officer attacked the Government for taking over territory in Persia which was not strategically situated and for going to a foreign land for petroleum when, he said, the United Kingdom had an abundance. Where in the United Kingdom these oil fields are situated he did not specify. Perhaps he meant to distill it from the bituminous shales.

The first move of the English in the war on Turkey was to take possession of the head of the Persian Gulf. This will give them access to their newly acquired oil fields, altho it will not be of much use until more wells are bored and pipe-lines laid. Great Britain has long laid claim to the control of the Persian Gulf and in the last few years has taken occasion to demonstrate her power in various ways. Her refusal to allow the Germans to carry their railroad from Constantinople thru Bagdad to the head of the Persian Gulf was one of the chief grounds for the German belief that England was their enemy and that a war was their only chance of getting "a place in the sun"; Russia, too, has been bent on getting to the Persian Gulf in obedience to the posthumous orders of Peter the Great, who, when he lived in the Caucasus, cast longing eyes to the southward. In 1907 Russia and Great Britain came to an agreement as to the partition of Persia. Russia was to have the northern part for her "sphere of influence"; Great Britain was to have the southern, while the land between was to form a neutral strip or buffer zone. This southern side of this zone touched upon the head of the Persian Gulf, so it apparently left unsettled the main point of contention. Parliament was disposed to disapprove of the Anglo-Russian agreement on the ground that it sacrificed England's claim to the exclusive control of the Persian Gulf, but the Opposition quieted down when it was hinted that British interests were secured by some sort of secret clause or private understanding. What that understanding was may be disclosed if the war should result in the partition of Turkey and Persia between the allied powers.

Persia called to her aid an American financier, Morgan Shuster, but Russia and Great Britain combined to frustrate his efforts to restore the credit and protect the integrity of Persia. When he was driven out of the country, Russia had a free hand and Russian troops have for some time occupied Tabriz and the Caspian coast. This gives them a chance to attack Turkey from the Persian side, and already fighting is reported between Lake Urumia and Lake Van.

DUTY AND DUTIES

WHAT I BELIEVE AND WHY—FIFTEENTH PAPER

BY WILLIAM HAYES WARD

THE Doctrine of Duty is a very large subject and might properly require volumes to discuss it adequately. In a single chapter one can do no more than lay down some main principles.

Duty has a dual aspect. It has to do with the doer and with that to which the doing is done. There must be a subject and an object; and usually the object will be other than the subject, altho it may be that one owes and performs duties which have relation solely to one's self.

As soon as one has relations to some one else duties begin; and duty becomes as primary, as obligatory, as necessary, as are geometrical truths. A person may be so stupid as not to see them, just as an ignorant person may not recognize a simple geometrical truth; but moral culture will bring out the applications of duty, and show what is right and what is wrong. There are no tribes so low that they do not recognize that there are obligations, and that some things are right and some other things wrong. The comprehensive law which embraces all duty is the exercize of good-will, of love to others, with its corollary that ill-will, disregard of others' welfare, is wrong.

If we should choose to believe that duty rests in seeking enjoyment, or in the perfecting of one's own powers, or in obedience to the customs or laws of society, even as the words *ethics* and *morals* come from Greek and Latin words meaning *customs*, even so the customs are supposed to be right because for the welfare of society; or one's developing of himself is of value as it helps the community; or the enjoyment sought is the usual measure of benefit to others. It is the welfare of the commonwealth or of its members individually that duty requires us to consider.

THE DUTIES OF GOD

In previous chapters we have considered God as the creator of the world. As soon as God created sentient life he had duties toward it. Before such creation, if there was any such time within eternity, he may be imagined as being alone, but having a nature which knew and approved, by anticipation, any duty which might arise. When he created, he created out of a sense of duty, of love to what he should create. It may not be easy to designate any particular duties he might have toward ether, or nebulæ, or the sun and moon, toward grass and trees; but as soon as intelligent human beings appeared, or in anticipation of them, duties developed. Duties are reciprocal; but God's duties to man whom he has made are prior to man's duties to God.

It is a very serious thing for us to attempt to measure God's obligation to his creatures, but at least we can say, notwithstanding our ignorance, as compared with his omniscience, "Shall not the Lord of all the earth do right?"

God's duties, be it then reverently spoken, must be embraced under the term of loving care. Other terms, such as justice, righteousness, holiness, express but incomplete phases of what *in toto* is love. So the best human figure under which to represent God's relation to his creatures is that of a Father, not Lord nor King. How God should exercize his fatherly love to us we cannot antecedently say; but we know he is good, and we know what he has done for us in nature. His obligation to us he has fulfilled by putting nature under beneficial laws that we can trust, and then bidding us depend on their certainty. Enough of these laws are so clear to the humblest understanding, those of the seasons and the growth of vegetation, that the lowest primitive savage could know them and live a happy and busy life. After only two hundred generations, if the life of man goes back six thousand years, or two thousand if the race has lived sixty thousand years, we have learned how to use more completely many of the occult laws of nature, and the millions of years yet to come will see manifold generations multiplying upon the earth with ever happier life. We may rest in the assurance that the Heavenly Father will do all that his wisdom sees is best for man made in his image; and we may indulge the eternal hope, notwithstanding the

gift of free will, that somehow and at some time moral evil will drop out of the world. Physical suffering we may hope will continue as long as man has a body and can grow strong by patience and struggle.

OUR DUTIES TO GOD

While I must believe that the duties of a Creator to his creatures are prior to the duties of the creature to the Creator, yet it is the latter with which we are mostly concerned. We can depend upon it that what is right he will do, and we can leave that to him. Our chief concern is with our duties to him.

(a) I have said that the evidence which nature gives us of the existence of God is probable evidence, and not absolutely demonstrative, altho the weight of probability seems to me to be such as to be practically conclusive. Now, in the case of action on probable evidence, two considerations must guide our conduct: one, the amount of evidence, whether great or small; and the other, the importance of the subject involved in the evidence. The stronger the evidence the greater the obligation; and equally, the seriousness of the subject must govern the attention we give to it. An unimportant conclusion, even tho probable, may be slighted or neglected; but even a slight degree of probability on such a subject as this, the existence of God, even were there a larger probability against it, could not prudently or rightly be overlooked, much more with the prevailing evidence that there exists a God with whom we have to do. It is a first duty for man to recognize his relation to the infinite Will and infinite Goodness above him. One who does not concern himself with such a God in whom he yet believes act as if he were mad.

(b) The next duty we have toward the God who is our Father is that of reverence and love, reverence for his greatness, love answering to his love. These feelings are much more than a sense of grandeur or an approval of goodness; they are directed to God as personal, loving, fatherly and respond with love to his love. If we believe in such a God, and feel so toward him, we shall express ourselves in honor shown to him and in the filial fellowship with him of prayer and praise.

PRUDENCE, ETHICS AND RELIGION

(c) Both prudence and duty—for prudence is a part of duty—require that we should act in such a way as to secure the good will of such a God. We give him a character that rises to our highest ideal of goodness. Our duty is to come up to that ideal, as far as we can, and so please him. We also allow to his infinite goodness the support of infinite wisdom and power. If we are his creatures, dependent on him, it is simple prudence to make him our friend. He will love our goodness; and if we are evil his infinite nature will oppose us and defeat us; and a sad thing it would be to make ourselves enemies of the loving yet holy God. Nor is this the attitude of selfishness. Our own love of goodness would ally us with the God of all goodness, and would compel and obligate us to love and follow him. When we love and serve Infinite Goodness as represented in God, we are loving our own ideal creation. More than that, if there were no God we should be required by our own sense of right to follow goodness and a merely ideal God in a stern and stoic way. A man has no right, even apart from God, to disobey his ideal of justice and kindness and love. Much more when he believes in God, and such a God, will it be his duty to reverence him, to learn his will and to obey him, both because he is the infinite God and because one's belief in the moral character of God corresponds with his own highest ideals of what is right. But beyond obedience due to one's own highest ideals, which is ethics, will be obedience and service due to God himself, which is religion.

As a part of the duty to act in such a way as to secure the good will of God, will be the obligation, also supported by self-interest, to learn his will. To be sure the will of God will be identical with the requirements of our own highest moral standards, but those standards alone, obeyed or disobeyed, have, apart from God, no force of benefit or loss beyond one's satisfaction or dissatisfaction with himself, the approval or disapproval of one's fellow men, the laws of one's country and the laws of nature. But disobedience to one's ethical standards may be secret and find no punishment, only the pleasure or success desired; while one's obedience may involve great inconvenience, or, as has often been the case, may be at the sacrifice of life. In such cases it will be a very strenuous soul, and an unusual one, which will obey the impulse of its own sense of duty unsupported by the sense of loyalty to a superior Power who must be obeyed. Such souls there doubtless are who will do right without regard to God:

"There are who ask not if thine eye
Be on them, who in love and truth
Where no misgiving is rely
Upon the genial sense of youth:
Glad hearts without reproach or blot
Who do Thy will and know it not."

But those who believe in God usually need to add to the incitements of their own moral nature a sense of the sure purpose of God to maintain in his own rule of the universe the moral laws which he obeys and wills to have obeyed by his creatures. Inasmuch as the belief in God as a personal spirit is closely related to belief in the future existence of our own personal souls, one who believes in God and immortality must seek to know what is right, to keep it in mind, to obey it in conduct, because it is the will of God, and he must have regard to his verdict and award; and that is a consideration far higher than that which we read in the noble words of Cicero written to his friend Atticus when anxious about his duty to the falling state: "What will history say of me six hundred years hence? That is a thing which I fear much more than the petty group of those who are alive today." Those who fail to keep God and the eternal life before them are likely to sink into that hopeless and irresolute attitude so well exprest by Paul, "If the dead rise not" "let us eat and drink, for tomorrow we die."

RELIGIOUS "SERVICES"

(d) Other duties to God may arise or seem to arise, which follow only indirectly from the knowledge of his existence, but they are formal, ceremonial, and not basic. One may properly believe that God requires the sacrifice of oxen, sheep and turtle-doves, or that he demands payment of tithes, or worship in a temple, or the hallowing of a day, or a certain manner and time of prayer. These will then be duties toward God and will be purely religious. The obligation to perform these acts will depend on the evidence we have that God requires them. They are not fundamental; a change as to the evidence of their being the will of God will change the duty. On these subjects we may differ. "Let every man be fully persuaded in his own mind." Some such duties may arise as the natural concomitant of belief in God. Particularly the privilege of prayer may also be a duty, and also some form of public worship, and fellowship in work to give a knowledge of God to those ignorant of him, and to persuade those who neglect him to recognize and obey him. Also those duties which are based on our relation to our fellow men, usually embraced under the term morals, and religious duties in so far as they are seen to be required by the will of God and are performed in obedience to him. Accordingly in the higher sense all duty is religion, as in a wider sense all religion is duty.

THE NEW BOOKS

MORE PANMANIA

JUST as a reading of Treitschke, Bernhardi, Chamberlain and other apologists of Pan German aggression had converted us to a belief that the Teuton and he alone today championed the principle of world domination by a single, mystically "superior" race, an Anglo-Saxon manifesto such as J. A. Cramb's *Germany and England* or Sinclair Kennedy's *The Pan-Angles* appears to confound our generalization. No doubt British imperialism has certain advantages over German; for instance, it professes to extend political liberty, while Bernhardi confines the German mission to "spiritual freedom." Mr. Kennedy is not without historical warrant when he claims that Anglo-Saxon expansion has been in the main the expansion of individual liberty and of local self-government. But it would be well for both Englishman and American to learn that just as the arrogance of a single Prussian officer may wipe out from the memory of an Alsatian, a Pole or an African native all the benefits which German administration and culture can confer, so the inordinate race pride of the English-speaking peoples has more than once undone the work of thousands of doctors, missionaries, judges, legislators, teachers and engineers who have labored to benefit their darker fellow-subjects and fellow-citizens.

The author suggests that these superior English-speaking peoples, the mother country, the colonies, and the United States of America, should form a great federation so that "the control of the world and the self-control of our own citizens will again be in the certain care of the Pan-Angles." This federation is expected to come as a result of a spontaneous popular movement such as that which federated the American colonies into the United States and the British colonies into the unions of Canada, Australia and South Africa. Federation being a principle familiar to all the English-speaking peoples should antagonize no one and would leave local patriotism uninjured. The book suggests no definite imperial constitution, and the author confines his discussion to a plea for closer union and an analysis of the causes which make it both possible and necessary. Enemies of the English-speaking nations will force them to unite even if otherwise they would not. "Russia and China are the rivals of tomorrow. Japan and Germany are the rivals of today." The author's comment on Germany is of curious interest in view of recent developments:

> The rise of the German empire might by Pan-Angles be regarded with antagonism, if Japan, Russia and China offered no dangers. The old and lasting fear that Pan-Angles have for centuries held toward Europe was the fear that called for the naval supremacy of the British Isles and for the Monroe Doctrine of America. Antagonism toward Germany might seem justified were it not that the fear of these other three powers, so different in civilization from us, makes Germany our natural and civilization ally.

The Pan-Angles, by Sinclair Kennedy. Longmans, Green & Co. $1.75.

SORROW MADE MUSICAL

In these poems one feels a struggle between a pure joy in the beauty of the world and a poignant compassion for its sorrow, voiced in the little lyric called "Sight," beginning:

"By the lamplit stall I loitered feasting my eyes
On colours ripe and rich for the heart's desire—"

and ending:

"And as I lingered lost in divine delight . . .
Suddenly, behind me in the night
I heard the tapping of a blind man's stick."

And in another occurs the couplet:

"My heart is a sunlit, windy sail;
My heart is a hopeless lad in gaol."

In "Hoops," which appeared in The Independent of June 1, 1914, and thruout the poems of Gibson there is the sense of the essential goodness of life, altho there is no flinching from its shadowed phases of poverty, sickness and sin.

"A Catch for Singing" is good tonic for a despondent fashion in letters, with its refrain: "The cherry-tree's in flourish." Altogether, his is the manliest voice among the younger choir, and the two qualities of simplicity and sympathy are united in him as in no other poet of the day.

Borderlands and Thoroughfares, by Wilfred Wilson Gibson. Macmillan. $1.25.

BOOKS OF THE WEEK

Through Siberia, the Land of the Future, by Fridtjof Nansen. An inventory of the vast Asiatic resources of Russia. Considers the problem of opening these vast wheatfields, equal alone to the combined area of France and Germany, to commerce. Best work on Siberia.

Stokes. $5.

The Grand Assize, by Hugh Carton. Final judgment at last for men and women before the great Confessor at the Bar of Life. Failures most of them. A Utopian sneer at puppets of the author's own creation, which has some dramatic quality.

Doubleday, Page. $1.35.

Innocent, by Marie Corelli. A nice, sugar-coated story of a frail, sweet little girl in contact with a cold, cruel-l wor-r-ld, told with lots of femininely italicized *you's* and *me's*, and mysterious looking French words.

Doran. $1.35.

The Threshold of Religion, by R. R. Marett. Enlarged edition of scholarly volume of essays on various aspects of primitive and comparative religion. Supports "pre-animistic hypothesis."

Macmillan. $1.50.

THE LAST WORD ON PLANTS

Fourteen years ago appeared the first volume of the *American Cyclopedia of Horticulture*, edited by Professor L. H. Bailey of Cornell University. We now receive volume one of the *Standard Cyclopedia of Horticulture*, which is a new edition, or, rather, a new work by the same editor, enlarged, rewritten and reset with added illustrations. It is a large octavo of 600 pages, covering the letters A and B, and has one or more illustrations on nearly every page. It is meant to be complete and to cover everything likely to be grown in the United States and Canada, flowers, fruits, vegetables, shrubs and trees. There are full lists and descriptions of species and varieties, with careful directions for cultivation, spraying, etc.; while for the important products several writers from different parts of the country tell how they are grown locally. The advantage of a cyclopedia is that, like a dictionary, it will be sure to give you whatever you may want; and the completeness of this work under the most competent editorship makes its possession most desirable. Prefixed to this first volume are 170 pages of very useful botanical material.

Standard Cyclopedia of Horticulture, by Prof. L. H. Bailey. New York: Macmillan. $5.

A HANDY ENCYCLOPEDIA

The Everyman Library has disproved the tradition that an atlas must be unwieldy and expensive and we are indebted to it for a like demonstration as to the encyclopedia. Here are twelve pocketable volumes at fifty cents apiece and they contain more topics than the larger encyclopedias. The *Everyman* is more than one seventh as large as the *Encyclopedia Britannica* and it costs less than one thirtieth as much. This means that we could afford to buy a new edition every year instead of once in thirty years and keep our information up to date. As first aid to the ignorant the *Everyman* is very serviceable because one can turn to it quickly with justifiable confidence of finding something about what he wants to know. For such ready reference the small type does not matter. The longer articles are not so well done and in some cases show a woful lack of critical editing. The article on New York City, for instance, contains many ludicrous misconceptions. Thus we learn of the addition of a previously not suspected borough in "Chester City," tho its location is not disclosed; "Hell's Mouth," generally known among the less well informed as "Hell Gate," now separates the upper and lower bays of the harbor instead of lying between Long Island and Manhattan; while among the most important features of the metropolis are "the many Chinamen engaged in laundry work." There are many humorous misspellings and wrong figures.

such as 1624 instead of 1614 for the founding of the city, but best of all is the one lone cross-reference which the editors have attached to their entertaining account: See Tammany Hall!

Everyman's Encyclopedia. Dutton. 12 vols. $6.

A GUIDE TO CITIZENSHIP

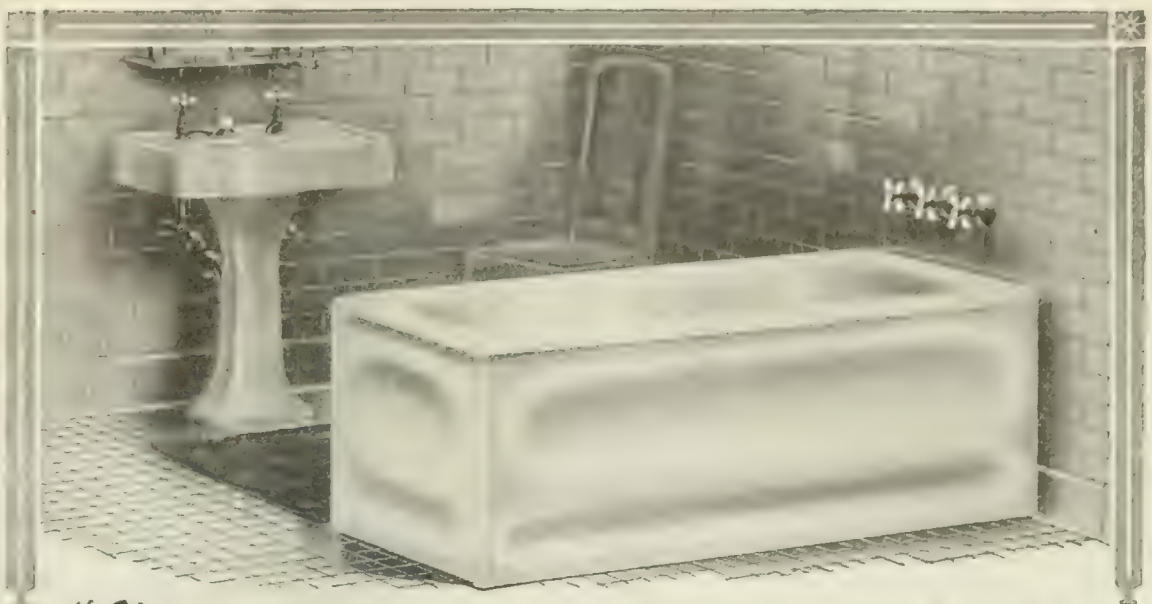
How a *Cyclopedia of American Government* so long escaped preparation is a mystery in view of the almost indispensable quality which Professors Andrew C. McLaughlin and Albert Bushnell Hart have given their admirable work, now complete with the publication of the third and final volume. All the newest "isms" are here, generally briefly and authoritatively set forth by their sponsors, who have been included among the two hundred and fifty contributors, as well as new phrases, new facts, new political methods and principles of social activity, which are always the most difficult to define. One of the best features is the attention that has been given to the unwritten and extra-legal government which is such a predominant part of American politics.

Appletons. $22.50.

A WARNING TO SPENDERS

In his little book, *Poverty and Waste*, Mr. Hartley Withers very seriously undertakes to convince us that poverty is in large measure due to unwise spending of our income. While the argument is orthodox enough, the author's basic assumption is that society suffers because our productive power is too small; our productive power is limited because we have insufficient capital, a situation brought about because those who might save spend too much on riotous living, automobiles and other superfluities. For a serious book by a well-informed man it is about as futile as the law allows; yet it is perfectly correct and obvious in every way and will cause no one indigestion.

Dutton. $1.25.



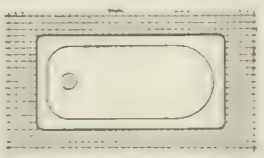
A "TONAL" PAINTER SPEAKS

Henry W. Ranger, an eminent American landscape painter and long-time leader of a group of artists known as "Tonalists," has been induced to talk on his views of painting by Dr. Raley Husted Bell, who has carefully transcribed his discourses and arranged them in a neat little book called *Art-Talks with Ranger.* The artist's experience, deductions, reminiscences, as well as his methods, are touched upon in a modest, generous and sane spirit, and the book is a worthy and enlightening contribution to the literature of the technic of painting. Mr. Ranger defines tonality as harmonious modulations of color.

Putnams. $1.50

ENTERTAINING THE CHILDREN

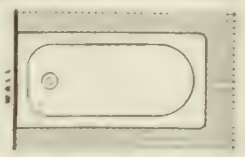
A literary novelty for children is a series of five little classics published between cardboard covers so that the pages can be unfolded like a panorama. On one side of this long sheet are artistic and softly tinted pictures, each with a caption in verse, and on the other side the entire story is related in simple prose. The books are *Robinson Crusoe, Hiawatha, Red Riding Hood, The Three Bears* and *The Children at the*



"Standard" ADAPTO BATH

is highly typical of progress in the manufacture of "Standard" Plumbing Fixtures. Before you build, study the ADAPTO and learn how admirably it adapts itself to every Modern Bathroom.

The ADAPTO is a bath encased in paneled porcelain enameled plates which give it a massive, solid and attractive appearance.

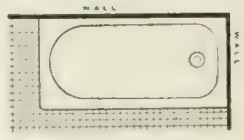


As the entire exposed surface is porcelain enameled, the ADAPTO is beautiful, sanitary, easy to clean, and the outside finish is as permanent and attractive as the inside.

PLAN VIEW OF ADAPTO BATH FREE FROM WALL

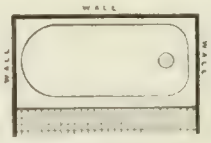
PLAN VIEW OF ADAPTO BATH BUILT INTO LEFT CORNER

PLAN VIEW OF ADAPTO BATH LEFT END BUILT INTO WALL



The ADAPTO is made in two heights—22 inches from floor to top and 18 inches from floor to top. Look for the "Standard" Green and Gold Guarantee Label on the genuine ADAPTO bath.

Consult your Architect or Plumber, or visit a "Standard" showroom where ADAPTO baths and other "Standard" Fixtures are displayed.



Fully illustrated literature, showing the "Standard" ADAPTO and other Baths, and our book "Modern Bathrooms" mailed free upon request, to persons directly interested. If possible, give name of Architect or Plumber.

WORTH WHILE READING

By the author of "The Happy Warrior"

The Clean Heart

By A. S. M. Hutchinson

The author's finest achievement, a novel equal in every way with the happy ending which "The Happy Warrior" boasted. $1.35 net.

The Story of Dartmouth

By Wilder Dwight Quint

A graceful review in word and picture of New England's famous college. With 10 pictures by Seaford. 8vo. Boxed. $2.00 net.

Social Life in Old New England

By Mary Caroline Crawford

A vivid picture of life in New England from the time of the Pilgrims to the middle of the last century. Illustrated. 8vo. Boxed. $2.50 net.

Big Tremaine

By Marie Van Vorst

A truly big American novel in a Virginian setting whose keynote is self-sacrifice. $1.35 net.

Rambles Around Old Boston

By Edwin M. Bacon

A rare volume, enlivened with 24 illustrations in tint by Lester G. Hornby. 8vo. Boxed. $3.50 net.

Historic Homes of New England

By Mary H. Northend

A fascinating book of beautiful pictures and sympathetic text. Over 150 half-tones. Royal 8vo. Boxed. $5.00.

How to Live Quietly

By Annie Payson Call

A companion book to "Power Through Repose," containing most mature advice to the nervous men and women. $1.00 net.

Major Prophets of To-day

By Edwin E. Slosson

The philosophy of Bergson, Maeterlinck, Haeckel and others condensed and made clear for the average reader. With portrait. $1.50 net.

Those Who Have Come Back

By Peter Clark Macfarlane

True stories of criminals, victims of drugs, of social crimes, etc., who have worked out their own salvation. Illustrated. 12mo. $1.35 net.

Little Women Letters From the House of Alcott

Selected by Jessie Bonstelle and Marian DeForest

A work of great human interest throwing light on the inside affairs of the Alcott home. With portraits, etc., $1.25 net.

The Charm of Scandinavia

By Francis E. Clark

A delightful travel book full of the history, sports, folklore, and description of the Scandinavians. Illustrated. 8vo. $2.50 net.

Little, Brown & Company, Publishers, Boston

Pole. The picture side of these sheets would form dainty decorations for the nursery wall.

Holt. 50 cents each.

AN APPRECIATIVE IRISHMAN

With characteristic light-hearted wit, George A. Birmingham, author of *General John Regan,* recounts his travels *From Dublin to Chicago* in leisurely pages full of digression so pleasant that one views with scorn the straight path of sequence. This genial Irish canon, keen observer and occasional satirist, makes a good deal of fun at our expense, but he heartily likes us, likes our women, our universities and even our architecture.

Doran. $1.50.

DESERT SANDS AND SENTIMENT

Animated conversation with a somewhat astonishing accompaniment of mal-de-mer begins the adventurous courtship of *A Soldier of the Legion,* the latest book of C. N. and A. M. Williamson. Characteristically up-to-date from modern dance to echo of war, it follows the well-worn grooves into which these authors pour a slightly varying mixture of romance and agreeable glimpses of unfamiliar corners of the world.

Doubleday, Page. $1.35.

A CLEVER BIT OF REPORTING

From convent school to city newspaper office is something of a plunge, but May Iverson is quite equal to the situation and triumphantly emerges a successful playwright after five years on the New York *Searchlight.* In its clear-cut, direct simplicity and appreciation of significant moments, *May Iverson's Career* is quite the best work Elizabeth Jordon has done.

Harpers. $1.25.

DETAILED UNPLEASANTNESS

By the author of *Elizabeth and Her German Garden*—and old friends promise themselves another delectable bit, duly encouraged by the wit, the aptness of phrase and the whimsical situation of the first chapters of *The Pastor's Wife.* But suddenly the author's buoyancy deserts the story and left to its own devices it merges into a heavy chronicle of the bleak existence of an English girl and her uncouth German husband.

Doubleday, Page. $1.35.

ELABORATION AND LITTLE PLOT

A conscientious reader, given to searchings of mind, may find some motif in Ethel Sidgwick's *A Lady of Leisure,* but to the average mortal it resolves itself into a series of disconnected conversations, clever in a detached way, but inconsequential. In spite of the author's dedication of the book as a Romance of Youth, there is no romance but ultimate matrimony—no youth save in actual years.

Small, Maynard. $1.35.

REVOLUTIONIST AT SEVENTEEN

In the bitter poverty of peasantry the seed was sown that bore fruit in a Socialist-Revolutionist. With rare discretion, Marie Sukloff allows fire of action to vitalize her *Life-Story of a Russian Exile* and tells, with a simplicity that does not lack intensity, of Siberian

exile with its sufferings—of escape—of re-exile as a terrorist assassin—and of yet another daring escape.

The Century Co. $1.50.

FOR YOUNG PEOPLE OF ALL AGES

Dr. Gladden's volume of addresses: to "those who have not finished their education," *Live and Learn* is, as we would expect, thoroly wholesome, wise and admirable. The learning to "think, speak, see, hear, give, serve, win and wait," words which furnish titles to the chapters, is no easy job, nor does Dr. Gladden minimize its difficulty, but out of his ripe experience and rich serenity of spirit he speaks golden words of warning and advice.

Macmillan. $1.25.

MORE OF FRIENDSHIP VILLAGE

Progress and provinciality march side by side in Zona Gale's *Neighborhood Stories* and if philosophy and metaphor occasionally break over the bounds of village viewpoint and spread to the broader horizon of the author's own thought and experience, the book is so humorously true to life that one chuckles even in the middle of a sigh.

Macmillan. $1.50.

THE GAMUT OF FORTUNE

Bellamy, by Eleanor Mordaunt, is the story of an English boy of the lower classes who, by daring and cleverness gains wealth and social recognition, but who, at last, returns to his original environment and marries the girl he first loved. In theme it is somewhat like Bennett's *Denry the Audacious*, but without its wit and refreshing literary style.

Lane. $1.35.

AN AMUSING ABSURDITY

The Honorable Percival, blighted-being, and his rigorous education at the hands of an audacious bit of mischief who joyously destroys even the shreds of conventionality left to a long sea voyage, make a merry and delightfully improbable tale when told with Alice Hegan Rice's cleverness and vivacity.

Century. $1.

THE ESSENTIALS OF CHURCH LEADERSHIP

Dr. George P. Mains has become a recognized leader in progressive theology among the Methodists. His new volume on *Christianity and the New Age* contains worthy discussions of many phases of Christian thought and activity such as the rural church, biblical criticism, plutocracy and socialism.

Methodist Book Concern. $1.50.

CHRISTMAS 1914

Alfred Noyes, poet and pacifist, has just published a one-act Christmas tragedy, "Rada," which ends with the mother shooting her twelve-year-old daughter and herself on Christmas Eve to save themselves from the drunken soldiers of the victorious army. A terrible but veritable picture of Hell.

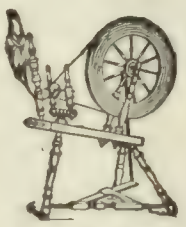
Stokes.

THOUGHTS FOR EVERYDAY LIFE

My Daily Meditation for the Circling Year is made up of page-long devotional talks based on suggestive scripture passages. Their quality is fully attested by the fact that they are written by Rev. Dr. John Henry Jowett of the Fifth Avenue Presbyterian Church.

Revell. $1.25

Handkerchiefs
at McCutcheon's



AT McCutcheon's you are always sure of finding the largest and most interesting collection of Pure Linen Handkerchiefs in the world.

Every conceivable style, quality and size from every country where Handkerchiefs are produced is always fully represented.

New handkerchief ideas usually come here *first* because this is the acknowledged *handkerchief headquarters.*

Just now we are offering an exceedingly attractive collection of Women's and Men's Handkerchiefs with hand-embroidered Initials at 25, 40 and 50 cents each.

WHAT 15c WILL DO

The little matter of **15c** in stamps will bring you the **Pathfinder** for **13** weeks on trial. The **Pathfinder** is an illustrated weekly, published at the Nation's Capital, for the Nation; a paper that gives all the news of the world and that tells the truth and only the truth; now in its 22d year. This paper fills the bill without emptying the purse; it costs but $1 a year. If you want to keep posted on what is going on in the world, at the least expense of time or money, this is your means. If you want a paper in your home which is sincere, reliable, entertaining, wholesome, the **Pathfinder** is yours. If you would appreciate a paper which puts everything clearly, fairly, briefly—here it is at last. Send only 15c to show that you might like such a paper, and we will send the **Pathfinder** on probation **13** weeks. The 15c does not repay us, but we are glad to invest in New Friends. MILITARY SANITATION

Until the Franco-Prussian War a scant generation ago armies always suffered more from disease than from the bullets of the enemy. Usually during the first month of the campaign there was very little illness. Then disease began to show itself and gradually eliminated all those of lessened resistive vitality, leaving the hardened soldiers, who were carried off only by severe epidemics. The German sanitary triumph was mainly due to the rapidity of the campaign and the consequent fact that the troops were not kept long in camp. At that time the great advances in bacteriology had not come. Pasteur was still studying fermentation, but had not turned aside from that subject to infectious diseases among human beings. His work had begun to revolutionize surgery thru Lister, but not medicine as yet. Koch's great discovery came in the early eighties, and the development of bacteriology, with its definite contribution to preventive medicine by revealing the bacterial causes of the various diseases and the mode of prophylaxis, did not come until the nineties. In spite of this our experience in the Spanish-American War was very discouraging. Sanitary science is now on trial, yet sanitarians face even the present war situation with confidence.

It has long been noted that whenever troops were on the move they were very little hampered by disease. In camp, however, they commonly suffered severely. As soon as camp was broken the enteric affections, especially, which had been the cause of much sickness and death, promptly diminished. So true was this that it used to be said that the army seemed to march away from some source of poison—hence the suspicion was often aroused that the enemy must have poisoned the wells, or if the army had been in a hostile country that the inhabitants had been tampering with the food which they supplied the soldiers. The suspicion that the army was being poisoned was correct. But the source of the poison, as we now know, was the army itself. It was poisoned by its own excretions. These got into the water supplies in the winter time or were carried back to camp by flies and other insects in the summer and were the fruitful source of disease. Much later than the Franco-German War in our own little Spanish-American conflict we came to realize this latter danger very well.

The one important thing that military sanitation must secure then is a supply of drinking water beyond any possibility of contamination by sewage. All the enteric diseases, particularly that scourge of armies, typhoid fever and the diarrheic affections, are due to the ingestion of human excreta. The food is not nearly so important as the water. The reason is clear. Nature has fortunately given, or man has developed, a taste for cooked rather than raw food. The cooking of food at once destroys the serious microbic elements that may be present and above all, thoroly sterilizes any contamination from human excretions and is far more effi-

cient than any artificial prophylaxis of sanitary science.

Cholera, that is, true Asiatic cholera, like typhoid fever is carried by water, but usually presents no serious danger in Western countries because the disease is not endemic. There will be very little need of special precautions against it in the Western war area, but in the Austro-Servian center of conflict it may present a serious danger. Cholera caused a great many deaths during the Balkan War scarcely more than a year ago. Almost inevitably some cases have held over in the unsettled state of those countries and an epidemic is possible enough if one is not already in progress in that quarter. French army surgeons are rejoicing over the fact that the French troops which have been exposed to typhoid fever in Africa have in recent years suffered very little from the disease, having been immunized by the so-called typhoid vaccine, and therefore will bring back no "carriers" of the affection into Europe. Any serious outbreak of typhoid will undoubtedly be the signal for mass immunization, tho a great many of the soldiers on both sides are already thus protected. The French Academy of Medicine is just reported as having offered all its facilities and the service of its members for the preparation of true vaccine for smallpox and typhoid vaccine, as well as any other medical purpose assigned by the Government.

After the care for the water supply the next most important sanitary factor is the prevention of the breeding of insects, nearly all of which are actual or suspected carriers of disease. The fly is probably the most serious and the latrines have to be carefully screened against it. In malarial countries the mosquito would have to be guarded against, but except from Italy and Turkey and the Balkans there will be very little trouble from malaria in the present war. Other insect pests will have to be fought, particularly on the Austro-Russian frontier. Typhus fever exists in central Europe as an endemic disease and its subsidiary title of ship or jail fever shows that it spreads particularly where people are crowded together. Recent studies have shown that the disease is diffused by the body louse, so that this parasite will have to be dealt with. In Russia relapsing fever, which used to be common in Ireland and Scotland, but is so no more, still occurs and the agent for the transmission of this is probably that guest of civilization *everywhere*, *cimex lectularius*, the ordinary bedbug.

It seems almost trivial to talk of insects as objects of solicitude when a great war is on, but these little things have often confounded the strength of great armies. The Russian troops might well bring with them some cases of plague and rats in the neighborhood of camps would provide the fleas that would transfer the disease to many human beings. On not a few occasions in history victory has seemed certain for a besieging army when plague broke

STEINWAY

IF you are thinking of purchasing a piano as an appropriate gift this Christmas, consider what a Steinway would mean in your home.

Necessarily the Steinway is priced slightly higher than pianos of other makes. This difference in cost merely reflects the superior qualities of the Steinway. The price makes possible the incomparable tone, resonant and sweet, and the perfect workmanship that makes every Steinway a lifetime possession.

We shall be glad to send you, free, illustrated literature, with the name of the Steinway dealer nearest you.

California Orange Grove

$50,000. Very best; never frozen; trees twenty-two years old; beautifully located near town and good roads; average net profit for past four years 12% on price asked; crop on trees for 1915 promises to be the best the grove has ever produced. Ideally located for health and pleasure. I offer this property on its merits. Address GEORGE R. STEWART, 388 So. Lake Ave., Pasadena, Calif.

FINE WISCONSIN FARMS for sale of all sizes and prices. They are among the finest in the State of Wisconsin, the soil is very productive, and the crops are always sure, as the rainfall is always ample; they consist of corn, wheat, rye, barley, clover, timothy, alfalfa, fruit and vegetables. They are located near churches, schools and good markets; prices are very reasonable and terms are part cash and balance in five years at 6 per cent. interest. Come at once and make your selection. We have just the farm you are looking for. Hart Lumber and Cedar Company, Oconto, Wis.

out and the siege had to be raised. The occurrence of the disease was looked upon as an act of Providence by the besieged; it is easy, with our increased knowledge, to see man's own neglect of cleanliness in the disposal of food remnants as the true factor.

The military sanitarian's main duty is that of the enforcement of thoro cleanliness and the proper disposal of garbage and sewage and the control of human parasites. There is no sure prophylaxis of disease unless the men will coöperate or unless stringent sanitary laws are absolutely enforced. It is all a question of little things. In spite of unfavorable conditions sanitary science can transform the pest hole of the tropics into a health resort at Panama, and it will be a rude shock if it fails to make this war mark an epoch in the care of large bodies of men in the field.

NEW RED CROSS MEMBERS

Each Contribution of Two Dollars or more constitutes the giver a Member of the American Red Cross for the current year, with a free copy of the October issue of the *Red Cross Magazine*. The Independent will send—by authority—to each contributor a Certificate of Membership and a Red Cross Button.

The total amount contributed to the Red Cross Relief Fund thus far thru The Independent is $3,571.33.

The following list covers the contributions of the past week:

R. W. Alby, Machias, Maine, $6.25; Tracy P. Anderson, Horicon, Wis., $2; Carl M. Brewster, Pullman, Wash., $7; Pres. M. T. Bates, Hiram, Ohio, $2; Miss Helen J. Barker, 9 Pine st., Concord, N. H., $2; F. J. Boehmer, care People's Bank, Jonesburg, Mo., $3; Albert Close, R. F. D. 7, Rome, Ga., $2; Prof. Geo. H. Colton, Hiram, Ohio, $2; Norborne Crowell, Hiram, Ohio, $2; Mrs. Anna H. Conant, care Trinity Church, Santa Barbara, 14 East Valein st., Santa Barbara, Cal., $6; Miss Edna B. Downing, Friends Academy, Locust Valley, L. I., $5; Jerome Dowd, care University of Oklahoma, Norman, Okla., $5; Prof. B. S. Dian, Hiram, Ohio, $2; Bernard C. Ewer, Reed College, Portland, Ore., $2.50; Mrs. Bernard C. Ewer, Reed College, Portland, Ore., $2.50; Chas. S. Fausold, Eliz. High School, Elizabethtown, N. Y., $4.50; Miss L. M. Ferguson, 1731 H street, Sacramento, Cal., $3; C. P. Fountain, care Agri. and Mech. College, College Station, Tex., $2; E. O. Gierre, care Drs. Gierre, Johnson & Koreu, Madison, Minn., $2; W. E. My Beauty Exercises

Will make you look Younger and more Beautiful than all the external treatments you might use for a lifetime. No massage, electricity, vibration, astringents, plasters, straps, filling or surgery — **Just Nature's Way.**

Results come soon and are permanent. My System makes muddy, sallow skins clear and the complexion as **fresh as in girlhood;** firms the flesh and never fails to lift drooping and sagging facial muscles, thereby obliterating resultant wrinkles. The too thin face and neck are rounded out and hollows filled in. No one too old or too young to benefit.

My System makes double chins disappear quickly and it leaves the **flesh firm,** after the superfluous fat is worked away.

My Beauty Exercises are supplemented by special work to make **the figure** more **shapely** and youthful; instructions to beautify the hair, eyebrows and eyelashes, hands, nails and feet.

No matter how tired, five minutes of my Facial Exercise will freshen complexion and give it a most exquisite coloring.

Write today for my New Booklet on "Facial Beauty Culture, Body Culture and New Beauty Suggestions"—**FREE**

If you tell me what improvement you would like, I can write you more helpfully.

THE WORLD'S METALS

The period of rapidly increasing growth in copper production seems to have come to an end for the moment. With the exception of the Chile Copper Company owned by the Guggenheims, no new large producer will enter the list in the near future.

New discoveries often appear at first to be playthings of science, but their practical application soon develops. The fluorescence of certain minerals when subjected to rays of ultraviolet light has already found practical application in the concentration of ores in mining.

The Standard Oil Company has assembled a large staff of American geologists in China and is rapidly pushing the exploration of the promising Chinese oil districts. These are to be worked on a coöperative basis, the Chinese Government having a direct interest in the results of the development.

In the near future increased interest is likely to be paid to gold mining, particularly in the way of working large tonnages of low grade ore. The gold output of the world is beginning to show an annual decrease, in place of the heavy annual increases which have marked the past three decades. No new high grade deposits have been discovered lately.

The United States has the largest known coal reserves in the world, followed by China and Germany in the order named, with Great Britain, Canada and Australia far behind. Since China has large iron ore deposits and very cheap labor, it is probable that the twentieth century will see the United States, China and Germany struggling for leadership in the steel industry of the world.

An international commission will attempt to settle disputes between squatters and American mining companies in Spitzbergen coal fields. Geologists estimate that the island contains two thousand million tons of workable coal, of high grade. Four months' winter darkness and a shipping season only three months long serve to limit development, but American interests are increasing output rapidly.

Two aluminum plants are now building in the South, one in North Carolina and another in Tennessee. Tho the entire American supply of aluminum ore is mined in the South, all our metallic aluminum has heretofore been made at Niagara and Massena Falls. Large water powers capable of developing very cheap electricity are more influential than ore supplies in determining the locations of aluminum plants.

Mining is done wholesale nowadays and one of the copper companies near Salt Lake City blasts down the ore from the mountainside with powder, loads it into cars with steam shovels, and crushes and concentrates it in two huge mills at the rate of 20,000 tons per day. A ton of ore contains only twenty-seven pounds of copper, yet the work is profitable enough to justify the spending of $15,000,000 on land and machinery.

THE MARKET PLACE

OUR NEW BANKING SYSTEM

This has been a notable week in the financial world. The Federal Reserve Banking system has gone into operation, the foreign exchange situation has shown a gratifying approach to the normal and the Cotton Exchange has opened for unrestricted business.

On Monday Reserve banks were opened in New York, Boston, Philadelphia, Richmond, Atlanta, Cleveland, Chicago, Minneapolis, St. Louis, Kansas City, Dallas and San Francisco. These institutions are under the supervision of the Federal Reserve Board in Washington, composed of the Secretary of the Treasury, the Comptroller of the Currency and five members appointed by the President.

The new banks are not institutions for the direct use of the public; they are bankers' banks. They have banks as stockholders, banks (and the United States Government) as depositors, banks as customers.

The Reserve banks will serve as depositaries of a part of the reserves of the national and other member banks. By thus concentrating the reserves of the banks in any district they will at the same time strengthen the underlying support of the banks in time of financial danger and permit the member banks to hold smaller reserves than have been the rule in the past. This release of reserve funds will enlarge the credit possibilities of the banks, while the concentration of the reserves will strengthen the ultimate basis of the credit.

It has taken a long time for us to come to this rational and enlightened improvement of our banking system. Its consummation could not come at a time when stability and flexibility in our banking arrangements were more urgently needed.

FOREIGN EXCHANGE AND THE RETURN TO THE NORMAL

Foreign exchange rates have taken a sudden drop almost to the normal figure. Indeed they have declined well below the point at which it is profitable to export gold. The syndicate which is arranging to meet New York City's obligations abroad by shipping gold to Ottawa, in calling upon its subscribers for another instalment of their subscriptions, requested that payment should be in clearing-house checks rather than in gold or in exchange, as in the case of the previous calls. The syndicate had found itself able to purchase bills of exchange for the whole amount —nearly fifteen million dollars—at rates considerably below $4.90, the reckoned cost of shipping gold to Canada. What this improvement in the exchange situation means is shown by the fact that when the syndicate was formed early in September, the arrangement with the city provided for a maximum of $5.033 for exchange, whereas the syndicate is now able to buy exchange under $4.90, with a resulting saving to the city.

THE COTTON EXCHANGE OPENS

The New York Cotton Exchange opened on Monday. The prices on the opening day were about what had been expected by those best informed, December cotton opening at 7.45, as against 10.75 when the Exchange closed on July 31. The trading was at first limited in extent, largely due to the absence of speculative buying and selling. The speculators were naturally holding off to see what the course of prices was likely to be. In the absence of speculation, and with every one tending to maintain an attitude of watchful waiting, there was little excitement in the market and not a great deal of business.

But the Exchange is open; and it should not be long before the real condition of affairs should begin to make itself clear and the market adjust itself according to the inexorable law of supply and demand. Then speculation will show itself again and resume the function of economic usefulness which for three and a half months it has been compelled by ulterior force to abdicate.

A simple explanation of this decided improvement in the exchange situation is given by the *Financial Chronicle*. It is the expiration of the moratoria in the leading European countries which has increased the supply of exchange bills and pulled the rate down. For the past three months our attention has been fixed on our debts to Europe, and we have had no eyes for the debts of the rest of the world to us. When the war broke out millions of dollars were due us on current account. In the ordinary course of events these debts to us —represented in great measure in bills on London, the banking center of the world—would have served to offset our debts to "abroad." The collection of what was due us and the payment of what we owed would have been, as it normally is, practically only a matter of bookkeeping.

But the British moratorium—and to a lesser extent the moratoria in other countries—relieved the foreign debtor of the necessity of paying his debts "on the nail," while it afforded no relief to the American debtor from his foreign obligations. In the words of the *Chronicle*, "Is it surprizing under these conditions that our foreign exchange market should have become completely disorganized? . . . The exchange market became a wholly one-sided affair."

The British moratorium, which has been extended from time to time, is run-

UNION PACIFIC RAILROAD CO.

A Quarterly Dividend

of $2.00 per share on the Common Stock of this Company [illegible] payable at the Treasurer's Office, 16 Broadway, New York, N. Y., on January 2, 1915, to stockholders of record at 3 o'clock P. M. Tuesday, December 1, 1914. The stock transfer books will not be closed for the payment of this dividend.

Stockholders who have not already done so are requested to fill dividend mailing orders [illegible] from which blank forms may be obtained.

EDWARD V. R. CROSBY, Treasurer.
New York, N. Y., December 12, 1914.

ning out. Dormant credits are being released. We are finding our task of paying our debts, in which we have never faltered, made easier as the rest of the world begins to pay its debts to us.

The Pacific Coast has a bumper crop of barley. The exports of barley from San Francisco during the past three months amounted to 3,785,452 quintals, more than ten times as much as was exported in the corresponding months of last year. The exports of canned salmon are twice those of last year.

The proposed $135,000,000 cotton loan fund does not violate the anti-trust laws. Attorney-General Gregory, in response to an inquiry from President Wilson, has rendered an opinion to this effect. Nevertheless serious obstacles have been encountered in carrying out the plan.

The New York City banks agreed with the utmost promptness to furnish their share of the fund which amounted to $50,000,000. But their example is not being followed with eagerness elsewhere. The banking interests of New England manifest an unfortunate indifference to the project. The apparent reason for this attitude in the banks of a cotton manufacturing region is that the pool would be likely to keep the price of raw cotton at a higher level than it would reach unassisted. In the West there seems to be hesitancy about entering into the scheme, arising probably from the conviction that the resources of the banks there will be needed to finance the grain crops and the local business interests.

Now that the Exchange is open again it should not be long before light will be thrown upon the question whether the fund is really necessary. If the course of the market should point strongly to the desirability of some means of supporting the price of cotton, the reluctance to subscribe to the pool may tend to disappear.

As we have pointed out, one of the most important lessons for the South to learn from its present predicament is that its farmers ought to raise something beside cotton. The Secretary of Agriculture has given good advice on this point to his compatriots of the South. In a circular recently issued, he says:

"The constructive plan which appeals to this department as wise and practicable is simply this: To bring home to the farmers the fact that in the next year or in the next few years the prices of all foodstuffs are likely to be high, and that it is the part of wisdom for the farmers of the country to make every effort to take advantage of the situation and to increase their products of foodstuffs so far as possible.

"Many of the southern states import many millions of dollars worth of grain each year. With the increasing prices of these products it is economically unsound for the South to rely so largely on other sections for them. It seems clear to this department that southern farmers should at least produce grains for home consumption as a means of cutting down the family expenses, and that they might increase their production of chickens, guineas, turkeys, and hogs to the point at least of supplying their own needs and the needs of their neighbors. With adequate attention to marketing, they can also profitably produce these things for interstate shipments."

Keeping all one's eggs in one basket has undoubted advantages of convenience, simplicity and economy until some one upsets the basket.

The following dividends are announced:

International Silver Company, coupons No. 32 of First Mortgage Bonds, payable on and after December 1.

Southern Pacific Company, quarterly, $1.50 per share, payable January 2, 1915.

Union Pacific Railroad Company, common, quarterly, $2 per share, payable January 2, 1915.

REPORT OF THE CONDITION OF

INSURANCE

CONDUCTED BY W. E. UNDERWOOD

This department of The Independent will undertake to furnish on the request of readers any information respecting the business of insurance and the companies transacting it which we have or can procure. We cannot, however, pass upon the debatable comparative differences between companies that conform to the requisite legal standards set up for all, except in so far as the claims made by any of them seem to be inconsistent with the principles of sound underwriting. Address all communications on insurance subjects to the editor of the Insurance Department.

CO-INSURANCE

A reader has asked me to furnish a simple explanation of the use and effect of the co-insurance clause in fire insurance policies. This is one of the least understood and most misrepresented provisions of that contract. It has been repeatedly legislated against, and is perhaps forbidden in a few states.

Theoretically, the making of fire insurance rates rests upon a scientific foundation. In actual practise this is not true because of the innumerable factors of hazard involved which, by reason of their constantly changing nature defy analysis and reduction to mathematical formulæ. The difficulties are being slowly overcome, but at this time it must be admitted that rating is only semi-scientific.

Now, it is quite properly assumed that the only hazard involved for consideration by a fire insurance company is the physical hazard—the inherent susceptibility of the risk to damage or destruction by fire. That is to say, there is positively no moral hazard thru the person insured. The rate, then, measures the physical hazard only. There being no moral hazard, the full value of the risk is safely insurable. That being true, the insurer is entitled to a premium calculated at the rate made on the full value of the risk.

Right there is where complications arise. The buyers of fire insurance protection, those whose morals are beyond reproach, to save premiums, rely on the existing means to subdue fires, and take an amount of insurance considerably smaller than the full value of the property. In following this plan, the insured calculates for an amount of indemnity which, in case of a partial loss, will fully cover him. That is sound business judgment in him, but it is injurious to the interests of his insurer. Why?

For this reason: Suppose the insurance bought equals but fifty per cent of the value of the property insured, and the damage inflicted by fire is found to be fifty per cent of the value of the risk insured. The company has received only one-half of the whole premium on that transaction, but its loss ratio on it is one hundred per cent. To put the matter in another way, for one-half of the whole premium on the risk (measuring by the full value of the property) the insured suffers a partial loss while the company incurs a total loss.

Co-insurance corrects that inequity. Under the "full" or "one hundred per cent co-insurance clause," insurance equaling the value of the property is required to be maintained, failing in which the insured becomes a co-insurer for the difference. His position in that case is that of any other insurer on the risk, all of which contribute their just proportion of the adjusted loss. If the property is entirely destroyed, the full face of the outstanding insurance policies covering it is paid. If the damage is but fifty per cent of the value, the insurance company pays its proportion only and the insured bears fifty per cent. He has saved fifty per cent of the premium; he is a co-insurer, and must contribute his share of the whole loss.

The "full" co-insurance clause has been used for this illustration to simplify it and render the principle clearer. As a matter of fact, that clause appears in comparatively few policies, while the "seventy-five per cent" and the "eighty per cent" clauses are quite common. Under these, the insured is required to carry insurance equal to seventy-five or eighty per cent of value, as the case may be, or assume the responsibilities of co-insurer for the deficiency. It is all a matter of contract, the consideration (premium) for which is adjusted to fit the circumstances. In some districts rates are based on the use of the clause; in others concessions in rate are made for its use. The principle is wholly equitable.

NOTES AND ANSWERS

P. K., Provo, Utah.—The company you inquire about was organized in 1895, under another name, to transact business on the assessment plan. Four years later it incorporated under the "stipulated premium" law. In 1900 it took its present name and in 1903 reorganized as a legal reserve company, with $125,000 paid-up capital, which was subsequently reduced to $100,000, carrying $25,000 to surplus. Since 1907 the stockholders have had eight per cent dividends each year. The actuarial methods are sound; policies fair and liberal; investments of good character and remunerative; home office expenses moderate and the cost of new business high. Comparatively speaking, the company is very young and very small. Its assets at the beginning of this year were $3,944,207; its surplus (including capital) $326,730. The insurance in force totals $54,061,305, a gain of about $12,000,000 over the year before, indicating aggressive work and accounting for the excessive expense in securing new business. The company is financially good for any contract it sells you; just see that the promises are in the policy, if you take one.

A recent joint examination of the Illinois Surety Company of Chicago by the insurance departments of Illinois and New York shows assets, $790,560; liabilities (excluding capital stock), $440,501; surplus, including $250,000 capital, $100,059. The shrinkage in surplus since January 1, is $185,291.

THE PUBLIC BUSINESS

Three loaves of bread for five cents were offered to attract customers to Chicago's new municipal market.

Boston is to put the garbage cans which disfigure Copley Square in vaults built under the sidewalks this winter.

For the first time since 1839, the State of Kentucky is to help a county build good roads by sharing expenses.

The Office of Roads of the Department of Agriculture has sent experts to Colorado to study the system of convict-built roads there.

Pittsburgh is now to beautify the numerous barren hills that break up the city by planting large areas of lycium vines imported from Asia Minor.

Recall petitions signed by 10,000 have been filed for the removal of the mayor and two city commissioners of Portland, Oregon, who are charged with gross incompetence.

Pittsburgh with $50,000 and Philadelphia with $1,131,000, are among the cities which will begin public improvements this winter in order to give work to the unemployed.

Iowa has now nine commission-governed and four general manager cities. The latter operate under a stretching of the powers of the city councils, so that the city clerks become purchasing agents.

Pueblo, Colorado, has completed its first levy under single-tax methods. This year vacant lots, rights of way and franchises are assessed at full value and improvements at only fifty per cent.

What insurance men say is the largest life insurance policy ever written, has been issued by a Hartford, Connecticut, company for $8,000,000, insuring the whole police department of Philadelphia.

Holyoke, Massachusetts, is considering following the lead of Worcester in establishing a municipal piggery sustained by garbage collected by the city itself. Worcester made $30,000 in one year from the sale of municipal pork.

Fort Wayne's municipal lighting plant is actively competing against the local private company and following a recent reduction to a six-cent rate, which the private plant has not yet met, it announces a further cut to five cents.

The municipal "movies" of St. Louis had a season of unqualified success. Fifty-six entertainments were given in fourteen city parks at a cost only of $2000, and it is planned to continue them thru the winter in the school buildings.

There are now about 17,000 men engaged in construction work on the New York subway and elevated road systems —14,000 on city-owned and 3000 on company-owned lines. Fifty-nine out of eighty-three contract sections have already been let—outstanding contracts by the city amounting to $140,516,325. Altogether eighty miles of new city-owned railroads with about 260 miles of single track are being built.

THE
PENN MUTUAL
LIFE INSURANCE CO.
921-3-5 Chestnut Street
Philadelphia, Pa.

ESTABLISHED 1847

Atlantic Mutual Insurance Co.

Atlantic Building, 51 Wall St., New York

Insures Against Marine and Inland Transportation, Risk and Will Issue Policies Making Loss Payable in Europe and Oriental Countries

Chartered by the State of New York in 1842, was preceded by a stock company of a similar name. The latter company was liquidated and part of its capital, to the extent of $100,000, was used, with consent of the stockholders, by the Atlantic Mutual Insurance Company and repaid with a bonus and interest at the expiration of two years.

During its existence the company has insured property to the value of.....	$27,219,045,826.00
Received premiums thereon to the extent of.....	282,298,429.80
Paid losses during that period	141,567,550.30
Issued certificates of profits to dealers.....	89,740,400.00
Of which there have been redeemed	82,497,340.00
Leaving outstanding at present time.....	7,243,060.00
Interest paid on certificates amounts to.....	22,585,640.25
On December 31, 1913, the assets of the company amounted to.....	13,259,024.16

The profits of the company revert to the assured and are divided annually upon the premiums terminated during the year, thereby reducing the cost of insurance.

For such dividends, certificates are issued subject to dividends of interest until ordered to be redeemed, in accordance with the charter.

"It is by educating people into better, easier and quicker ways in their daily work that our national weeklies can be of service."
William R. Willcox, President Efficiency Society

The First Efficiency Number

of The Independent will appear on November 30, 1914. In this issue EDWARD EARLE PURINTON will begin his first magazine series, entitled "Efficiency and Life."

For this occasion the following national authorities will contribute their views on various phases of Efficiency:

EFFICIENCY IS FAIR PLAY
By JUDGE ELBERT H. GARY, Chairman of the United States Steel Corporation.

THE QUICKER WAY
By WILLIAM R. WILLCOX, President Efficiency Society, Former Chairman New York Public Service Commission.

EFFICIENCY AND THE CITY
By HON. JOHN PURROY MITCHEL, Mayor of Greater New York.

THE NEW EFFICIENCY OF THE SPIRIT
By DR. LUTHER HALSEY GULICK, Former Lecturer on Hygiene, New York University, Author of "Mind and Work," "The Efficient Life," etc.

BATHTUBS AND EFFICIENCY
By HARRINGTON EMERSON, President of the Emerson Company and Efficiency Counsel for the U. S. Navy.

WILL POWER, THE TAP-ROOT OF EFFICIENCY
By DR. CHARLES W. ELIOT, National Educator and Former President of Harvard University.

RECREATION FOSTERS EFFICIENCY
By JOHN WANAMAKER, Former U. S. Postmaster-General and Leading American Merchant.

BEFORE WE CAN HAVE EFFICIENCY
By LOUIS D. BRANDEIS, Efficiency Counsel for the Great Railroad Systems.

MAKE THE MIND A BURNING-GLASS
By FRANK A. VANDERLIP, President of the National City Bank of New York.

EDUCATION FOR EFFICIENCY
By F. C. HENDERSCHOTT, Founder of the National Association of Corporation Schools.

In later numbers Mr. Purinton will consider various factors in Efficiency based on his study of over 500 efficiency methods and systems and his personal acquaintance with hygienic and psychological authorities, corporation heads, social service experts and efficiency engineers. He will discuss the relation of efficiency to such subjects as the day's work, food, drink, thought, dress, play, buying, selling, money, home, building methods, suburban life.

What England needs is one of those Culebra slides in the Kiel Canal.—*Boston Transcript.*

Speaking of high churchmen, an English parson has just entered the aviation corps. *Columbia State.*

She—Don't you think that fellow in the gray suit is handsome?
He—No, he's got a face that only a mother can love.—*Michigan Gargoyle.*

She—It takes me fifteen minutes to dress in the morning.
He—It only takes me ten.
She—But I wash!—*Princeton Tiger.*

Ruth rode in my new cycle-car
In the seat in back of me;
I took a bump at fifty-five—
And drove on *Ruthlessly.*
—*Yale Record.*

The action of the French authorities in commandeering all the taxicabs for army service was a master-stroke, everybody being familiar with their unequaled propensities for making fearful charges.—*Nashville Southern Lumberman.*

ENGLAND'S LUCK

"Lucky thing at a crisis like this, that we have such topping statesmen."

"Rather! How quickly they've got on, too—it only seems like yesterday that they made a mess of everything."—*London Opinion.*

W. J. Bryan's idea of peace is to make a speech about it; a bishop's idea of peace is to pray for it; an editor's idea of peace is to write about it.

Meanwhile, the war goes on without interruption from anyone.

When a war is in progress, something more forceful than speeches, prayers and editorials is necessary to stop it.—*E. W. Howe's Monthly.*

SHERIDONG'S RIDE

Down from the north, at break of day,
Bringing to Chalfonte-sur-Livre fresh dismay,
The affrighted air with a shudder bore,
Like a herald in haste to the chieftain's door,
The terrible rumble and grumble and roar
Telling the Germans were coming once more—
And Sheridong one hundred and sixty miles away!

But there is a road from Chalfonte-sur-Livre town,
A good smooth highway leading down.*
And there, thru the flush of the morning light,
A racing motor car, black as night,
Was seen to pass as with eagle flight.
He stretched away with his utmost might;
Hills rose and fell, but his heart was gay,
For Sheridong was one hundred and twenty-seven miles away.

The rest of the story is sad to tell.
He stopped for a blow-out at Villeduvelle,
He ran out of oil at Asheleycart
And the storekeeper charged him a dollar a quart.
And at Pont-du-Thierrydesplaines, alas!
He found to his horror he'd run out of gas,
And he walked to Wallabaloo-a-Main
Before his tanks were replenished again;
He had to go round at Chalouselbode
Full twenty-five miles—they were fixing the road.
But the worst thing of it all, at Dilly-sur-Tout,
The general's cigarettes gave out,
And the battle went on, that mournful day,
With Sheridong eighty-eight miles away.
Newark News.

*So the guidebook said.

JUST A WORD

John Hays Hammond, whose wide experience as a consulting engineer has familiarized him with investment conditions all over the world, will contribute to an early issue of The Independent a far-sighted and constructive article under the title "The Expansion of Our Latin American Trade." It is one of the most pregnant and timely articles that we have seen on this important subject.

Dr. Louis Livingston Seaman, The Independent's exclusive representative, an international authority on sanitary science in war, will contribute a most important article on the humanitarian and sanitary side of the conflict, with photographic illustration. The authority which Dr. Seaman brings to this paper makes it one of the most interesting documents which has been published concerning one of the most far-reaching phases of the Great War. He has just returned to London from the Belgian and French fighting lines, where he discussed Red Cross organization and sanitary science with Belgian, French and British experts. His statements concerning the actual condition among soldiers in the fighting line are so frank that his first copy of the article failed to pass the French censor.

The Independent's correspondent at the front, Alfred Stead, in graphic fashion will describe "How Tommy Atkins Gets His Breakfast," in one of our early numbers. "Imagine," he says, "a daily picnic for well over two hundred thousand men, with the certainty that there will soon be another equal number and another to provide for. The British army in France is fed, clothed, supplied with everything from toothbrushes to nine-inch howitzers or naval guns with a clockwork regularity. That is one of the secrets of the readiness of the British forces to meet all sorts of danger and fatigue—their commissariat and supply has never been found wanting." In a subsequent article Mr. Stead will deal with the British methods of "Saving the Wounded."

A Professor of Chemistry of the State College of Washington writes: "Your magazine is to be commended for its fine selection of articles and pictures of the war, and especially for your editorials, which I believe reflect the sober judgment of most American people."

An Ohio subscriber writes: "In my eighteenth year I became a 'devil' in a printing office. Among the exchanges I found The Independent. I of course was attracted by its merits. That was more than forty years ago and I have never missed a single week in reading it, except a period of several months some years since while traveling in Europe. But I directed that they should be preserved for me, and I at least 'looked them over' upon my return. For more than thirty years I have filed them. Naturally my household would feel that it had sustained a loss if The Independent did not come regularly, so be kind enough to advise how much of a check I shall send for five years."

Melvil Dewey, President Lake Placid Club, writes in characteristic fashion: "I am myti proud ov my activ part in getting the Independent into Chautauqua. Yu ar making it betr and betr and I am giving copies to our peopl here and publicli and privateli telling them all that it iz the best weekli in the English language and growing betr. We wil do all we can to help yu."

In the introduction to his letter among those in "The Best Book I Have Read This Year" series in the Book Number, Mr. Joyce Kilmer was erroneously said to be editor of the literary supplement of the New York *Times*. Mr. Kilmer is a member of the staff. We regret the misstatement.

Making People Healthwise

This Article will appeal to all who are interested in health, its source and its conservation. It deals with the work of an institution the mission of which is to point the way to efficient living.

WHAT is the fundamental basis of efficient living?

None will dispute that this basis is good health.

With the aid of good health, maximum achievement is possible—without it, the disappointments of existence are immeasurable. Good health is the essential of efficiency.

And—as upon the health of the individual must depend that of the family, nation and race as well, it follows that whatever tends to spread knowledge of the ways of good health must be of interest to every thinking man and woman.

To many, it may seem a misnomer that a great Health University like that at Battle Creek should be called a Sanitarium.

Yet what it is called does not seem to have in any way interfered with the excellence of the institution's work, the rapidity of its progress nor the extension of its propaganda.

On the contrary, the very fact that the Sanitarium, through the practice of its teachings, is able continually to demonstrate all it would establish in the way of advanced knowledge of health development and preservation is strongest proof of the excellence of the fundamental idea upon which its system and methods are based.

For nearly half a century the Battle Creek Sanitarium has been teaching and demonstrating the ways of good health—helping well people to keep well and sick people to get well—giving them health wisdom.

All the essentials of the Sanitarium system are so sensible and natural that you find yourself wondering why you have not been thinking—and doing—for yourself the things recommended.

And—what you are taught is taught in such a way that you are able to follow the teaching afterward in your own home without difficulty, inconvenience or radical changes in your daily routine.

At the Battle Creek Sanitarium, you are taught to do the things of every day—the things you now do—in such a way that you gain benefit instead of doing yourself harm.

You are taught habits of health. You are taught what is adapted to your own particular needs—and what to avoid.

This is necessary because each individual is different from every other individual—as you are different from your neighbor.

This is why it is valuable for you to learn just what your needs are—and just how they may best be met, so as to enable you to achieve efficient living.

You are taught at the Battle Creek Sanitarium when and under what conditions you should sleep—and how to breathe both while asleep and awake. You are also taught what and how to eat and drink.

You are taught how to secure best protection from your clothing and how to exercise so you may preserve all your strength, energy and vigor and make them serve your purposes to best advantage.

To gain benefit from the teachings of the Battle Creek Sanitarium, it may not be necessary to materially alter any of your habits.

Instead, you may learn through Sanitarium teaching how to do your daily tasks in such way as will least weary you—so that your vitality may be efficiently applied instead of spent and wasted.

All of us have strength to live—if we but save instead of waste this strength.

This most of us must learn.

And this the Battle Creek Sanitarium teaches. It makes us healthwise.

Every reader of The Independent is invited to send for a complimentary copy of "The Measure of a Man."

Address Box 360

VOLUME 80 MONDAY, NOVEMBER 30, 1914 NUMBER 3443

A NEW DAY FOR BUSINESS

PRESIDENT WILSON, in his letter of congratulation to Secretary McAdoo on the opening of the Federal Reserve banks, gives expression to his conviction that we are looking upon the dawning of a new day. He recounts with pride the large accomplishments of his administration in relation to business and industry and speaks with exuberant optimism of the future. He writes not so much as a historian, with unbiased judgment and impartial analysis. He writes rather as a Democrat, his vision a little obscured by party loyalty, his judgment a little modified by proximity to the event. Nevertheless his summing up is on the whole sound, and his predictions not out of harmony with the probabilities.

The conditions out of which we seem to be emerging Mr. Wilson describes effectively in these terms:

> Ten or twelve years ago the country was torn and excited by an agitation which shook the very foundations of her political life, brought her business ideals into question, condemned her social standards, denied the honesty of her men of affairs, the integrity of her economic processes and the morality and good faith of many of the things which her law sustains.
>
> Those who had power, whether in business or in politics, were almost universally looked upon with suspicion, and little attempt was made to distinguish the just from the unjust.
>
> They, in turn, seemed to distrust the people and to wish to limit their control. There was an ominous antagonism between classes. Capital and labor were in sharp conflict, without prospect of accommodation between them. Interests harshly clashed, which should have coöperated.
>
> This was not merely the work of irresponsible agitators. There were real wrongs which cried out to be righted, and fearless men had called attention to them, demanding that they be dealt with by law.

THE credit for the correction of these conditions he gives to the Democratic party. It has recast the tariff "with a view to supporting the Government rather than supporting the favored beneficiaries of the Government." A banking and currency system has been established, "which puts credit within the reach of every man who can show a going business," under the supervision and control of the Government. A trade commission has been created thru which "those who attempt unjust and oppressive practises in business can be brought to book." Labor has been made "something else in the view of the law than a mere mercantile commodity—something human and linked with the privileges of life itself."

Of the future Mr. Wilson expects much. It is "clear and bright with the promise of the best things." While there was "agitation and suspicion and distrust and bitter complaint of wrong," he says,

> groups and classes were at war with one another, did not see that their interests were common, and suffered only when separated and brought into conflict.
>
> Fundamental wrongs once righted, as they may now easily and quickly be, all differences will clear away. We are all in the same boat, tho apparently we had forgotten it. We now know the port for which we are bound. We have, and shall have more and more, as our understandings ripen, a common discipline of patriotic purpose. We shall advance, and advance together, with a new spirit, a new enthusiasm, a new cordiality of spirited coöperation. It is an inspiring prospect. Our task is henceforth to work not for any single interest, but for all the interests of the country as a united whole.
>
> The future will be very different from the past, which we shall presently look back upon, I venture to say, as if upon a bad dream. The future will be different in action and different in spirit, a time of healing, because a time of just dealing and coöperation between men made equal before the law in fact, as well as in name.

In his conclusion that the time has come when we must proceed from the task of destructive criticism to the work of constructive upbuilding, President Wilson is overwhelmingly right. Ten years ago there was much that needed to be torn down—monopoly, special privilege, injustice by the few toward the many. Today there is much that needs to be built up—prosperity, confidence, justice of the many toward the few.

LONG vistas open before us. The swift disaster of the war, which dislocated credit, stifled business and menaced prosperity, promises to bring to us on the rebound, as it were, great opportunities for business expansion and increased trade. In order to avail ourselves of them, it is necessary, as Mr. Wilson says, that the United States "mobilize its resources in the most effective way possible and make her credit and her usefulness good for the service of the whole world." It is far from being a merely selfish opportunity that lies before us. The nations of Europe, by going to war, have cut themselves off from the service which it has been their good fortune to perform for the rest of the world. That service must still be performed. The people of South America and Asia and Africa still need what Europe has estopped itself from continuing to supply. It is natural that they should look to us. If we open our eyes to the situation in the earnest realization that it involves serious responsibilities as well as promising opportunities, they should not look in vain.

But we must mobilize our resources. We must work together. We must encourage business, not harry it. We must substitute coöperation for criticism, mutual helpfulness for class antagonism.

Mr. Wilson has pointed out one direction in which action should be taken in the new spirit:

> The railroads of the country are almost as much affected, not so much because their business is curtailed, as because their credit is called in question by doubt as to their earning capacity. There is no other interest so central to the business welfare of the country as this. No doubt in the light of the new day, with its new understandings, the prob-

lems of the railroads will also be met and dealt with in a spirit of candor and justice.

There was a time when it was essential that the principle of public control of common carriers and government regulation of railroad rates should be firmly established. In bringing about this desirable end it was inevitable that there should arise an atmosphere of antagonism between the railroads and the public. But that time is past. The principle is immovably fixed. The railroads accept it as completely as their most ardent critics of the past. The atmosphere of antagonism should be blown away. The time is here to use the machinery first set up to protect the public from the railroads, to defend the railroads from the menace of untoward conditions. We have compelled the railroads to do justice to us. We must see to it that we do not hesitate to do justice to them.

President Wilson is right. A new day is dawning. We shall hasten its coming just in proportion as we realize that a new time demands a new understanding, a new coöperation, a new spirit.

As business prospers, we all prosper. In the misfortunes of business we all suffer. The new day of prosperity must be accompanied by a new day of comprehension of the needs of business, encouragement for the aims of the business world, recognition of the sincerity of purpose of business men.

PERSONAL EFFICIENCY

AND now after we have organized our establishment, and systematized our work and card-indexed our time and reduced our motions to their lowest terms, we come to the most difficult matter of all, the question of the efficiency of the individual. Is the reader doing as well by himself as he is by his business? Is he as successful in attaining the aims that he thinks most desirable, whatever these may be, as he is in achieving the ends of his profession? Is he making as much out of life as he ought to make? Let us, in accordance with the spirit of the time refer the question to an expert, the most expert of modern analysts of the human mind, Professor William James. In his soul-stirring essay on "The Energies of Man," he says:

> The human individual lives usually far within his limits. He possesses powers of various sorts which he habitually fails to use. He energizes below his maximum and he behaves below his optimum. . . . Compared with what we ought to be, we are only half awake. Our fires are damped, our drafts are checked. We are making use of only a small part of our possible mental and physical resources.

In this expert opinion we would all concur from our own experience. But, when we pass from diagnosis to remedy it is found, as usual, that doctors disagree. How can we tap these unutilized reservoirs of power and emotion that we feel within us? Professor James says by prayer. Professor Chittenden says by fasting; he would have us cut down our calories and protein by half. Mr. Edison would cut down our sleep by half; three or four hours every day or so when we have nothing else to do. Heart and lungs never sleep; why need hands and brain?

Perhaps we do eat and sleep too much, tho personally we are somewhat skeptical of the desirability of much curtailment of the restorative functions of the body. But at least we ought to see to it that we eat and sleep efficiently, that we do not cheat our stomachs to please our palates and do not dawdle away our bedtime. Listening to the clock strike at night is as lazy a habit as watching it in business hours. And when we go in for pleasure purely we should look out that we get the worth of our time and money. We ought not to waste our playtime in doing anything less than what we most delight in doing so far as that is attainable. This also is an essential part of the efficient life.

This week's Independent is its first Efficiency Number—tho by no means its first contribution to the cause of Personal Efficiency. Other articles by Mr. Purinton, and by those who have greatly achieved in various departments of world-activity, will follow during the coming months and will, we believe, attract wide attention.

WHY ARE WE LEAVING VERA CRUZ?

FOR seven months the United States army has been in possession of Vera Cruz. American soldiers have managed the city government, collected the customs of the port, maintained the peace, conserved the city's health. The soldiers have now come home, leaving American interests to be protected by American warships in the harbor. They bring with them the customs monies that they have collected, to be held in trust until it can be decided to what government in Mexico they should be turned over.

Why are we leaving Vera Cruz? This is only one of several questions which have accumulated in the past year and which the people of the United States are entitled to have answered.

Why did we seize Vera Cruz? Was it to prevent the landing of a cargo of arms and ammunition for Huerta? If it was, why was the landing of that identical cargo at another port a few weeks later permitted without the shadow of a protest? Why, if the armed forces of the United States were sent to Mexico because Huerta would not salute the American flag, was the question of that salute entirely ignored in the mediation proceedings? Why, having remained in possession of Vera Cruz for four months after Huerta decamped from Mexico, do we leave just at the moment when rival forces are again fighting for Huerta's vacant chair?

The President doubtless has sufficient answers for these questions. It was doubtless proper for him to keep his own counsel so long as our army was in foreign territory. But the army is on its way home again. It is time for the President to take the country into his confidence. The country has a right to know.

WAR AND NON-RESISTANCE

NON-RESISTANCE is not a very seductive doctrine to most of us, but it does appeal to certain mystical, martyr-like spirits, who would rather suffer wrong than do wrong, and who conclude that an injury done to another is always wrong. And they rest on the words of our Lord, who bade us when smitten on one cheek to turn the other.

But that is a very literal way of interpreting Oriental language. In a way which we whose Western speech is more exact regard as extravagant, it exprest emphasis by generalities which neglected exceptions and conditions, intent only on the present duty. To turn the other cheek, that is, to avoid malice and revenge, is a duty, but the language of the command is not literal or

universal. So the best Christian conscience interprets it, and interpreted it from the beginning. So Jesus interpreted it when he sent forth the disciples as Apostles, armed with swords to protect themselves against robbers. Indeed Peter carried a sword when he followed Jesus to the Garden of Gethsemane and used it on one of the crowd that came to apprehend our Lord. Jesus could not have meant to inculcate non-resistance in case of violence by robbers and assassins. And Paul, when he said that magistrates bear not the sword in vain, and that they are a terror to evil-doers, taught another lesson from that taught us by Tolstoy. The whole content of Paul's teaching of love, or of our Lord's teaching of non-resistance, is found in the condemnation of malice and revenge and the practise of patience under injuries, without ill will. But to protect one's life or one's liberty and rights is not forbidden.

Think what the extreme doctrine of non-resistance involves. It will be fine when the time comes that there is no one to resist, because no one does a wrong. But as men now are, non-resistance means anarchy. It means the abolition of officers and courts, the end of law supported by force, the abolition not of armies alone, but also of judges, sheriffs and police. It means a free hand for robbers and desperadoes, and rapine and outrage and murder rampant. No man and no woman would be safe from violence. Human nature does not allow us to submit to that and grace does not require it.

But we may be told to take the case of nations, and of Belgium in particular. Belgium was invaded by an army, and she resisted. If she had chosen non-resistance her fields and cities would not have been ravaged and her men slain, and Great Britain would not have been required to come to her help. Most true, sadly true; but if a man has the right to resist violence, so has a nation. Belgium submissive would have lost her freedom; she would have been the abject tool of another nation. She resisted, and if successful, she will maintain her freedom and honor for a thousand generations. That is worth all that it costs for one generation, for death is not too high a price to pay for liberty.

AN UNACADEMIC ACADEMY

WHENEVER it has been proposed in England or the United States to establish an academy corresponding to the Académie Française the fear has been exprest that such an institution would in the end become rather a hindrance than a help to literature and art because it would necessarily have a conservative influence and tend toward the fixation of standards and the repression of initiative. Now that we have at last an academy of our own it seems determined to disprove these doubts by a demonstration of the opposite tenor. Certainly any one who could have complained of the New York meeting of the American Academy of Arts and Letters last week as being unduly conservative must himself be far in advance of his time. Almost every speaker seized the opportunity to make a plea for a more original, vital and national expression of his art. Professor Brander Matthews of Columbia opened the session with a theory of "What is Pure English?" that would have shocked the purist, for he held up to admiration the verbal coinage of the workshop, the marketplace and the newspaper office and commended those who have the courage to pronounce *garage* to rime with marriage. Professor Robert Herrick of Chicago followed with a eulogy of the new town of Gary and the spirit of San Francisco after the earthquake as examples of "The Quality of Imagination in American Life." Next came the musician, and Mr. Arthur Whiting, in defending the right of "The American Composer" to an unbiased hearing, classed "Dixie" among the greatest of the world's songs and rejoiced that American ragtime was sweeping over the world. If to have an aversion to futurism, cubism, and the like be a conservative then Mr. Paul Dougherty must be so classed, but otherwise his address on "Modern Tendencies in Painting" was radical in the extreme, for in his denunciation of affected culture and compulsory admiration he virtually denied the usefulness of any form of training in the appreciation of art.

From academicians of this type the untutored genius seeking out new paths has evidently nothing to fear. But it must be remembered that the American Academy is a young thing yet, only six years old in fact, and that its present members have grown up in an unacademic land. Perhaps when it gets to be 380 years old like its French prototype it will have gathered a bit of moss on its back. The Paris papers which told of the flight of the Government to Bordeaux on account of the approach of the German army, recorded also the news—if such it could be called—that the French Academy held its usual session and continued its work on the dictionary, reaching, with unconscious appropriateness, the word "Exodus." The delegate of the French Academy to the American at the New York meeting was M. Brieux, himself no traditionalist, for his dramas deal with modern evils in most unconventional fashion. But this son of the people, "the Tolstoy of the Temple quarter," as he is derisively dubbed by the Parisian *élite*, stood out among the American academicians like a robin in a flock of ravens, for his coat was covered with embroidery and medals and he wore a gilded sword by his side. It is unfortunately true that French authors are still sometimes obliged to resort to the sword and the Bois de Boulogne to defend their honor or increase the sale of their books, but they are supposed to wield a mightier weapon. Why should they not then wear a fountain-pen set in jewels or, better still, a miniature typewriter in gold and enamel? We commend this suggestion to our American academicians who so far have not distinguished themselves from the common herd—in external appearance of course—than by the wearing of "a bow of purple ribbon bearing two bars of old gold" as specified in Article IX of the constitution of the National Institute.

NATIONS CHANGE THEIR MINDS.

MEN and women change their individual minds, peoples change their collective minds. This makes politics interesting. Also, this puts substance into our hopes for the human race.

We judge nations in this matter much as we judge individuals. The man who changes his mind too often or for trifling reasons we look upon as a light-weight and make small reckoning of his influence. Nations that go from one policy to another too light-heartedly, we set down as deficient in character. But the man who never changes his mind we call a bourbon, and the

nation that makes no new departure we describe as unprogressive—when we are polite.

Changes of political feeling and resulting changes of policy within those limits that are bounded by the platforms of two great parties we take as a matter of course. Not so do we take fundamental changes of conviction on great subjects, that only the little parties venture in ordinary times to chatter about. Yet the United States preeminently, and other nations to an extent not to be disregarded, have undergone these more momentous revolutions of belief and purpose.

Whig domination in the early days of the American republic was more than party ascendancy. It was an expression of an accepted order. Kings and lords had been proscribed, not so superiority nor privilege. Today the very men recognized by everybody as in reality superior, in character, in intelligence and in effectiveness, question both the rightfulness and the expediency of privilege. They prefer, and they think it wise, to mark off all personal superiority from every sort of circumstantial advantage. They are working with the socalled masses to create the widest objective equality—political, legal, educational—and so to deal with property and the industrial organization of society that disparity of economic condition shall decrease.

The first onset of democracy, however, was a wave of narrow-minded dogmatic individualism. It was the intellectual and political self-assertion of frontiersmen whose initiative and self-reliance owed small debt to government, law, institutions of learning or social opportunity. They associated government with authority and privilege, and held that government best that governs least. The Civil War revealed the imperative necessity of governmental efficiency in a time of national peril. The resistless evolution of industry and the rise of the gigantic power of organized capital has revealed the not less imperative necessity of governmental efficiency to protect the equal rights of all citizens and to adjust conflicting interests. And now the exhibtion which the German nation has made to all the world, of the relation between superlative efficiency and a social organization that holds together in a working order government, corporation and individual, has compelled everybody to reflect upon the practical problem of developing the like efficiency in every nation without undue sacrifice of liberty. We may count it as a certainty that democracy from this time forth will see more things above the human horizon than are set down in the creed of *laissez faire*.

If changes of conviction as profound as these are possible to a people so self-satisfied and so headstrong as we Americans undoubtedly are, may we not hope that a nation so ruthless in its splendid ability and strength as Germany has shown herself to be, may in the coming days, after this murderous conflict is over, undergo conviction of sin, and, taking her place among the penitents, begin to appreciate the value of liberty and of the individual, as America, England and France are sure to appreciate the value of organization, system, forethought and collective efficiency? Why may we not hope and expect that this will happen?

And if it happens, if the nations that now are bent upon crushing and humbling one another, shall see more nearly eye to eye, in a happier day, may not mankind hope and with reason expect that a yet deeper and mightier change of mind and of heart shall sweep away the whole horrible expectation, program and enginery of war? May not the whole world give itself, in joy and without misgiving, to the perfection of social efficiency directed upon the nobler work of emancipating man from all remaining bondage, of poverty, ignorance and wrong? Why need we doubt?

A PLACE IN THE SUN

MAXIMILIEN HARDEN, the editor of *Zukunft* and recognized as "the most influential publicist in Germany," scorns to make excuses for Germany's entrance into the war. He sets forth Germany's case with unblushing frankness:

> Let us drop our miserable attempts to excuse Germany's action. Not against our will and as a nation taken by surprize did we hurl ourselves into this gigantic venture. We willed it. We had to will it. We do not stand before the judgment seat of Europe. We acknowledge no such jurisdiction. Our might shall create a new law in Europe. It is Germany that strikes. When she has conquered new dominions for her genius, then the priesthood of all the gods will praise the God of War.
>
> Germany is not making this war to punish sinners, or to free oppressed peoples, and then to rest in the consciousness of disinterested magnanimity. She sets out from the immovable conviction that her achievements entitle her to demand more elbow room on the earth and wider outlets for her activity.

This interpretation is not official. It may not be true. But if an editor of Herr Harden's standing believes it to be true—and he would hardly make such an assertion if he did not believe it—that in itself is significant.

It is just because the majority of the American people, with every desire in the world to be neutral, cannot escape the conviction that this is Germany's real attitude, that American public opinion tends strongly to favor the Allies. The people of the United States will never accord their approval to a nation which plunges a continent into war in order to "demand more elbow room" and to conquer "new dominions for her genius."

THE WARDEN OF SING SING

IT is unusual to have a leader in prison reform appointed to the command of a great prison. Governor Glynn's appointment of Thomas Mott Osborne as warden of Sing Sing is as admirable as it is unexpected. Mr. Osborne is an independent Democrat—independent, that is, of Tammany Hall, against whose domination in the state he has led a revolt. He has been mayor of the city of Auburn, a member of the New York Public Service Commission, and is chairman of the New York Commission on Prison Reform.

If all reports are true, and there seems no reason to doubt it, Sing Sing badly needs a new head. It has been used as an adjunct of Tammany Hall. Its warden has just resigned under compulsion because he permitted a banker-convict to wander about the country practically at will in the guise of a chauffeur. Sing Sing has been honeycombed with political favoritism. It has fostered vice instead of reforming the vicious. Instead of turning criminals into men it has tended to turn men into habitual criminals.

Mr. Osborne is a man of high character, earnest purpose, and enlightened mind. It will tax his courage, his endurance and his wisdom to perform the labor of Hercules that lies before him.

THE STORY OF THE WEEK

The Campaign in France and Belgium

The fighting in Flanders has slackened owing to the cold and wet weather. Human endurance has reached its limit, altho human courage is unfailing. The breaking of the dikes and locks of the canals has flooded the fields and filled the trenches, and the sea is swept far inland by the gales. Snow has fallen and the water in which the soldiers have to stand or lie is freezing cold. Most of the villages and farmhouses have been destroyed, so there is no shelter or protection for the combatants except such as they can construct for themselves. In this, however, they have shown great ingenuity in the effort to make themselves safe and comfortable. Some of the trenches are lined with concrete and provided with drains, while the dug-outs, where the soldiers sleep when off duty, are warmed by oil stoves.

There is no material change in the positions of the opposing forces in Flanders. Dixmude is still under German control, altho it has been rendered uninhabitable by the bombardment from the British warships.

At the other end of the long line of battle, on the Franco-German frontier, an increase of activity is reported. The Germans have got within twelve miles of Verdun and are bringing their heavy guns into play on the fortifications. Fort Camp des Romains, one of the barrier fortresses on the Meuse, near St. Mihiel, has been held for a long time by the Germans in spite of the strongest efforts of the French to regain it. Now the Germans have succeeded in crossing the Meuse at this point and have established themselves on the western bank by the capture of the town of Chauvoncourt. If they are able to hold their line of communication with Metz this will give them a new vantage ground for their attack on Verdun.

THE GREAT WAR

November 16—Germans defeat Russians at Vloclavsk, Poland. British Parliament votes additional war credit of $1,125,000,000 and calls for a million more men.

November 17—British defeat Turks at head of Persian Gulf. Germans take Chauvoncourt on other side of Meuse from St. Mihiel.

November 18—Battle between Russian and Turkish fleets off Sebastopol. German warships bombard Russian fortress of Libau.

November 19—Austrians defeat Serbs at Valievo, south of Belgrade. Russians occupy Carpathian passes.

November 20—Germans regain Lodz and Plock in Poland. Turkish cruiser "Hamidieh" bombards Tuapsé, on Black Sea, 77 miles southeast of Novorossinsk.

November 21—Heavy fighting in Mazurian lake region of East Prussia. Turkish troops invade Egypt and reach Suez Canal.

November 22—Germans again within forty miles of Warsaw. Germans bombarding Ypres and Soissons.

The Austro-Servian War

The Great War began with the bombardment of Belgrade by the Austrians on July 29. It was not to be expected that the city could hold out long against the whole power of Austria, so the Servian Government, like the French, withdrew from the capital, and established itself in Nish, a mountain stronghold 130 miles in the interior. But the espousal of the Servian cause by Russia changed the aspect of the situation, for Austria was at once obliged to concentrate her forces on the eastern frontier to protect Galicia against the Russian invasion.

The Serbs and their blood brethren the Montenegrins took advantage of this to carry the war into the enemy's country by invading Bosnia. Reports from Nish announced a series of overwhelming victories in which thousands of Austrian troops were killed and captured. The Serbs claimed at one time to have occupied Sarajevo, the capital of Bosnia, and even threatened to march on Budapest.

These fabulous victories, however, failed to give them any material advantage and they have now been forced back at all points.

Semlin, opposite Belgrade, and the fortress at the junction of the Save River with the Danube, were taken by the Serbs, but they were not able to hold them and now Belgrade is more closely invested than before. An Austrian army from over the Drina has approached the capital from the rear and by the capture of Valievo, thirty-five miles southeast of Belgrade, has cut it off from Nish. Six thousand Serbs were taken prisoner and a large amount of arms and supplies were seized, for Valievo had been fortified to stand a long siege.

In Herzegovina near the Adriatic coast the Montenegrins have also suffered a decisive defeat from the Austrian forces.

The Advance on Warsaw

In contrast with the western theater of operations, where the French and German lines have remained almost stationary for the last two months, the east has been the scene of rapid movements and start-

On the left, viewed from the end, a man has just been shot in the cheek and has swung around; in the center lies a dead man; beside him a Red Cross surgeon is attending a wounded soldier

THE GERMAN ADVANCE IN POLAND

General von Hindenburg has turned tables on the Russians and is again invading Poland between the Vistula and Warta Rivers. The Germans are now within fifty miles of Warsaw, at Plock, Skierniewice and Lodz

ling changes of fortune. In that same time the Germans have swept over Poland to the gates of Warsaw and then as quickly have been driven back to their own frontier, and have now advanced again half way to the Polish capital. The immobility in the west is in fact directly connected with the celerity in the east, for the horses and automobiles which the Germans used for their rapid advance on Paris in the first month of the war have now been mostly withdrawn from France and Belgium for use in Poland, to match the Cossack cavalry, which have always been the pride of the Russian army, and which are their most effective arm in the present campaign.

General von Hindenburg has again proved his skill as a strategist. While Petrograd was reporting the rout of his army and its hot pursuit by the Russians, he was gathering his forces at Thorn for another blow. Here he had the advantage of the German railroad, designed, in fact, with such maneuvers in mind. There are only three railroad lines in western Poland; these cross the German frontier respectively at Mlawa, Thorn, Kalisz and Chenstochova, and lead to a common center at Warsaw. There are no lines connecting these along the frontier on the Russian side. But on the German side railroads run parallel to the boundary all the way along from the Baltic to Galicia.

It is a fundamental principle of Prussian strategy to carry the campaign into the enemy's country whenever possible. In this case the advantages of this plan are apparent, for the German railroads along the frontier are intact, while in the Russian territory, which has been twice fought over, we must suppose that not much remains of tracks, embankments, bridges and stations. As soon as the German troops retreating from Warsaw had reached their own country they were rushed north by train and motor to the vicinity of Thorn, the fortress which bestrides the Vistula River where it leaves Russian territory.

By November 5 General von Hindenburg was ready to reassume the offensive, and with an army of some 500,000 men again invaded Poland. With his left wing on the Vistula and his right on the Warta, he marched along the line from Thorn to Warsaw. He reached Vloclavsk, about thirty miles from the frontier, on November 12, and in a four-day battle defeated the Russians. This enabled him to advance some twenty miles further, and the German front now extends from Plock to Lodz, about fifty miles from Warsaw. The Grand Duke Nicholas, the Russian commander-in-chief, has about 900,000 men to meet the German invasion.

In Galicia

In coöperation with this movement the Germans in East Prussia have retaken Mlawa and are advancing on Warsaw from the north, while in the south they have again taken the offensive and are attacking the Russians in the vicinity of Radom.

The Galician campaign depends upon the fortunes of war in Poland, for the Russians would not dare to get far ahead of their front in the north, otherwise they would be in danger of being cut off by a flank movement of the Germans across the Vistula. So when the Germans made their first advance toward Warsaw in Poland the Russians in Galicia who had come within thirty-five miles of Cracow, withdrew to Lemberg. When the Germans were driven back from Warsaw the Russians again moved westward and even past their former high-water mark of Tarnow. It was even an-

RECRUITING ENGLAND'S LAST MILLION

The Carlton Hotel in London used as a great billboard to stimulate patriotism in the crowds of passersby

nounced from Petrograd that the bombardment of Cracow had begun and that the fall of that city was imminent.

But now that the Germans are once more moving eastward the pressure on Cracow is relieved. The Russians have retired from Tarnow, and if we may credit Vienna reports the Austrians defeated them north of Rzeszow and took 3,000 prisoners.

The Russians, however, are pressing the siege of Przemysl and claim that the fortress is already negotiating for surrender. The Russians have again occupied Stryi, Uzsok and other Galician towns at the entrance of the passes leading thru the mountains into Hungary, but they are not likely to attempt to cross the Carpathians in force during the winter. The Russian forces in Galicia are said to number 1,600,000.

The Russo-Turkish War

Engagements by land and sea are reported but it is hard to tell what they amount to, since both sides claim the victory. The most important is the naval battle fought near the Crimean coast if the Russians are right in claiming that the "Goeben" received there a serious injury. The "Goeben" is the German battleship which, together with the light cruiser "Breslau," was in the Mediterranean at the outbreak of the war, and in order to escape capture by the French, went to Constantinople, where it was announced that it had been sold to the Turkish Government. The German officers and crews remained in charge of the vessels and, after they were repaired, they began hostilities by a bombardment of Russian ports in the Crimea.

The Russians retaliated by shelling Trebizond, where the chief damage inflicted was the destruction of the Russian consulate and the wounding of the consul. This was followed, on the 19th, by the bombardment of Klopa, a port near the boundary of Russian Transcaucasia. At Trebizond and Klopa the Turkish forces were gathered for a raid on Batum, along the coast.

On November 18 the Russian fleet encountered the "Goeben" and "Breslau" about twenty-five miles off Sebastopol and at once opened fire at a distance of forty cable lengths. The "Goeben" responded tardily and ineffectively; the "Breslau" did not take part in the conflict. The Russian fleet, consisting of two battleships and five cruisers, could, therefore, give their undivided attention to the "Goeben," whose 11-inch guns were no match for the 12-inch guns of the Russian flagship "Evstafi." The first volley from the "Evstafi" caused an explosion on the "Goeben" and set the vessel on fire. The other Russian vessels also attacked, but the greater speed of the "Goeben" carried her out of range about forty minutes after the engagement began. The Russians lost twenty-three men killed and nineteen wounded, according to their own account.

A launch from the United States cruiser "Tennessee," trying to enter the harbor of Smyrna, was fired upon by the Turkish forts. At the request of Ambassador Morgenthau the "Tennessee" withdrew to Chios, a Greek port in the Aegean. The Turkish Government explains that the firing was not a hostile act, but merely a friendly warning that the harbor was mined and closed.

Reports of the fighting in Armenia are conflicting. According to Russian reports their troops are making satisfactory progress in the direction or Erzerum. According to the Constantinople version of events, the Russians were defeated at Koprikoi, thirty miles east of Erzerum, with a loss of 4000 dead, 4000 wounded and 500 prisoners, and only escaped complete destruction by reason of the fog and snow.

The Shah of Persia has announced his intention to remain neutral, but the Persian tribesmen about Lake Urumia are said to be rising against the Russians, who have for more than a year been in virtual control of the Province of Azerbaijan.

The Invasion of Egypt

The Khedive of Egypt is now at Constantinople and the English will not permit him to return to the country of which he is the nominal ruler. He has, therefore, thrown in his lot with the Turks and is on his way overland to Damascus to join the force which is preparing to invade Egypt. This force, according to Turkish accounts, numbers two hundred thousand; the French estimate it between sixty and seventy thousand. The Bedouins have already crost the line which extends north from the Gulf of Akaba to the Mediterranean and divides Palestine from Egypt, and fighting has taken place at El Arish, on the Mediterranean. On the west of Egypt, in the territory of Tripoli and Cyrenaica, which the Italians have recently annexed but have not yet conquered, the Bedouins are also rising and the Italian Government has been forced to send more troops to Africa to defend the coast towns.

At Shatt-el-Arab, where the Tigris and Euphrates rivers empty into the Persian Gulf, the British troops from India captured an entrenched camp held by 4500 Turkish troops, with twelve guns. The mouth of the

Growing Export Trade

The opening, at the beginning of last week, of the twelve district banks of the new currency and reserve system, and the reopening of the New York and New Orleans Cotton Exchanges, which had been closed for three and one-half months, were followed by a general recognition of the fact that there had been a marked improvement of the condition of business. There were many optimistic expressions of opinion, and many signs that confidence was displacing the depression which prevailed during the first weeks of the war. It was seen that much of the improvement was due to the growth and character of our export trade.

Wheat has been going out in large quantities and there has been a growing foreign demand for American flour. Recent shipments (flour reckoned in terms of wheat) have been in the neighborhood of 8,000,000 bushels a week. Exports of all breadstuffs in September and October made a new high record. Cotton has been the exception, but the exports of this staple have risen from less than $6,000,000 in September to $20,400,000 in October, with larger gains in the present month. The completion of the cotton loan pool of $135,000,000 promises to relieve the planters who have lost for a time so great a part of their foreign market. The exports of October a year ago were $107,000,000.

For some time to come there will be nothing more interesting in the export trade than the production and shipment of supplies of various kinds ordered by the European belligerents. These orders already exceed $200,000,000, and are exerting a stimulating influence in many industries. The warring nations are buying in this country twenty submarines, large quantities of powder, cartridges, shrapnel cases, torpedoes and canteens. They are paying $6,000,000 for wagons; $7,000,000 for soldiers' shoes (2,000,000 pairs are to be made in New England); $4,250,000 for motor trucks, and $6,500,000 for harnesses and saddles. These are for the field artillery horses. There has been one sale of $2,500,000 worth of horses, and probably $40,000,000 more will be paid. The clothing orders include 800,000 hospital shirts, 1,500,000 yards of shirting flannel, 350,000 army blankets, 200,000 pairs of socks, and 1,000,000 yards of cotton duck. Millions have been paid for oilcake, barbed wire, lumber and canned meats. It was due in part to such purchases that our exports exceeded imports in October by $57,000,000.

Mr. Wilson Sees a New Day

In a brief note to the President, on the 16th, Secretary McAdoo announced the opening for business, on that day, of the twelve Federal reserve banks, and congratulated him upon "this result of the great piece of financial legislation with which your name is imperishably associated." On the following day the President replied in a long letter, at the beginning of which he said he did not know that any special credit belonged to him, and that in the work were embodied the labor, and knowledge, and forethought, and practical experience, and sagacity of many men.

The new system, he said, had done away with agitation and suspicion, because it had done away with certain fundamental wrongs. Ten or twelve years ago the country was torn and excited by profound agitation. Those who had power were looked upon with suspicion, and they in turn distrusted the people. There was ominous antagonism between classes. The tariff had been purposely contrived to confer private favors upon those who were coöperating to keep the party that originated it in power, and in this fertile soil the interlaced growth and jungle of monopoly had sprung up. Credit was too largely in the control of the small groups who had planted and cultivated monopoly. The control of all business, big and little, was for the most part potentially, if not actually, in their hands. "And the thing stood so until the Democrats came into power last year."

But, by reason of the recent legislation, the recasting of the tariff, the new system of banking and currency issues, the new trade tribunal, etc., there had been reform, and the soil had been laid bare out of which monopoly is to be eradicated. The new reserve system had come when it was imperatively needed, because of difficulties due to the great war. The railroads had been affected, as to their traffic and credit. "There is no other interest," said Mr. Wilson, "so central to the business welfare of the country. No doubt, in the light of the new day, the problems of the railroads will also be met and dealt with in a spirit of candor and justice."

The future was clear and bright

Bain

THE MOST FORMIDABLE GERMAN GENERAL

General von Hindenburg, whose earlier defeat of the Russians in East Prussia was the most definite success of the war and who checked the second great advance of the Russians in Poland

with promise of the best things. "Fundamental wrongs once righted, as they may now easily and quickly be, all differences will pass away." We were about to advance with a new spirit and a new enthusiasm, and the past would seem like a bad dream. The future would be a time of just healing and cordial coöperation between men made equal before the law in fact as well as in name, and the new banks were the principal agency for emancipation." "A new day," said he in conclusion, "has dawned for the beloved country whose lasting prosperity we so earnestly desire."

The Panama Canal

The annual report of Colonel Goethals, Governor of the Panama Canal Zone, shows that the cost of constructing the Canal has been $353,559,049. Appropriations made by Congress amount to $374,048,194, and a little more than $12,000,000 of this sum was for the fortifications. The earthquake shocks of October, 1913, and last May, were the most severe that had been known since the beginning of American occupation, but the great locks and dams were not affected by them. Up to November 1 the Canal's earnings were $746,792. October's receipts exceeded those of September by 40 per cent.

President Wilson's plans for his participation in the formal opening ceremonies have been completed. The twenty-seven foreign ships will arrive at Hampton Roads in the first half of February, to join there our fleet of seventeen ships. On February 22 the President will review the entire fleet as it starts for the Isthmus. On March 5 he will go again to Hampton Roads, and will sail for Colon on the battleship "New York." At Colon he will be transferred to the "Oregon," and on this ship he will pass thru the Canal at the head of the fleet, accompanied by the Secretary of the Navy, Admiral Dewey and Admiral Clark, who commanded the "Oregon" during her memorable voyage around Cape Horn, at the time of the war with Spain. After the celebration at Balboa, Mr. Wilson will go northward on the "New York" and will be in San Francisco four days.

Labor at the Mines

At the convention of the American Federation of Labor, in Philadelphia last week, a resolution was past calling upon President Wilson to take possession, for the national Government, of the Rockefeller mining property in Colorado, and to hold it under a Federal receivership until the operators accept the President's plan for settling the strike controversy. The resolution is addrest to both the President and the Attorney-General. Mr. Wilson's plan involves a three years' truce, during which the differences may be adjusted under the laws of Colorado. It has been accepted by the strikers, but the operators object to it. The property referred to is that of the Colorado Fuel and Iron Company. Much of the company's stock is owned by Mr. Rockefeller. Some weeks ago the President was urged by representatives of the Federation to take possession of the mines and close them. It was then said at the White House that he did not intend to do this.

There has been no disorder in the Hartford Valley and Prairie Creek mining districts, in Arkansas, since four companies of Federal cavalry were placed there by direction of the President to assist the civil authorities in enforcing the orders of the United States District Court, which had appointed a receiver for a company owning several mines and was attempting to punish union men for burning the company's buildings and killing two of the receiver's guards. On the 20th, work was resumed in one of the mines, under the protection of the troops, the receiver employing non-union men. He intends to increase the force and to use non-union men in several other mines. Some expect that the employees will be attacked.

The War in Mexico

It was expected at the end of the week that General Villa, commander of the forces controlled by the Aguascalientes convention, would take possession of the Mexican capital within a day or two, and probably without a battle. Carranza had moved the seat of his Government to Orizaba, which is near Vera Cruz; General Obregon, commander at the capital, had withdrawn nearly all of his troops, leaving a small force there under General Blanco, to preserve order; General Pablo Gonzales had retreated from Queretaro before Villa's advancing army, and Zapata, after two weeks' fighting, had captured Puebla, where textile mills representing an investment of $32,000,000 are said to have been looted and destroyed. In his southward march Villa had met little opposition, and several Carranza garrisons had joined his army.

The negotiations for the retirement of both Carranza and Villa

© International News

THE RUIN OF WAR

A battered church at Pervyse, in whose graveyard—with its nameless crosses—a mere boy is helping to bury the Belgian army's dead

came to nothing. Carranza had offered to surrender his power to Gutierrez, the Aguascalientes convention's Provisional President, if Villa would resign, leave the country, and meet him in Havana on the 25th. Another condition was that the convention should at once select a new Provisional President, and that both the Carranza and the Villa forces should be placed under his command. At first it was thought that an agreement would be reached. It was said that Villa had consented to retire. But Carranza, fearing Gutierrez, asserted that he had offered to surrender his power not to this Provisional President, but to Pablo Gonzales, one of his own leading generals. Whereupon Villa remarked that while he was willing to resign and leave the country, he would not do so until after Gutierrez was seated in the President's palace at the capital. Reports which seem to be trustworthy say that Villa, resenting Gutierrez's approval of the retirement plan, cut the wires on which Gutierrez was negotiating with Carranza and Gonzales, and virtually imprisoned Gutierrez, altho the latter was allowed to move about in Aguascalientes.

After the failure of the negotiations, Obregon, with Carranza's approval, assumed supreme command at the capital, and in a proclamation denounced Villa as "a monster of treason and crime." Carranza went to Orizaba. Some said his purpose was to be near Vera Cruz in order that he might quickly take possession after the departure of our troops; others asserted that he had in mind his own flight from Mexico. It had been predicted that there would be a great battle at Queretaro, and Gonzales' retreat from that city caused surprize. Obregon, it was said, had gone to the west coast. Some predicted that Villa, at the capital, would be attacked by him from the west and by Carranza from the east.

The Troops at Vera Cruz

Our Government had said that the troops would be withdrawn from Vera Cruz on the 23d. No change of purpose was announced. The $2,000,000 collected there will be held at Washington for the present, but will eventually be paid to the Government of Mexico. It was known that Villa desired a postponement of the withdrawal. On this account he was denounced by Carranza and Obregon for lack of patriotism. When the Brazilian ambassador offered to act as mediator, Obregon said to him that if he came as a representative of the United States (our interests at the capital have been placed in his hands) he could not consider the proposition, because of our unjust occupation of Vera Cruz. The offer was not accepted. General Funston was directed to provide transportation for about one hundred priests and nuns, refugees in the city. Two hundred other refugees have asked President Wilson, by telegraph, to assist them in going away, as they cannot pay for passage and believe their lives will be in danger when the city is taken over by the Mexicans.

From the New York World

UNCLE SAM: Isn't your friend a little careless with firearms?

Four Catholic priests were put to death last week by the order of General Amar, the revolutionist Governor of Michoacan, who said they had taken part in an uprising. It appears that with arms in their hands they had sought to prevent the desecration and destruction of their churches by the soldiers. Addressing the Federation of Catholic Societies in Boston last week, Cardinal O'Connell said all Catholics should protest against the recognition at Washington of any Mexican Government which would not guarantee perfect freedom in religion. "A Masonic conspiracy," he asserted, had "for two years deluged Mexico with blood, draining its resources and bringing atheism and anarchy."

There has been more fighting at Naco, on the Arizona border, and several persons in the American city were wounded last week by bullets and shrapnel. One of these was Mrs. Krohn, the wife of a Southern Pacific railroad officer. Another was a United States customs inspector, whose leg was broken while he was in a hotel on the American side. Since the beginning of the siege of the Carranza garrison, which has cost 2000 lives in fifty-one days, twenty-seven persons on the American side have been wounded. Nine of these were American cavalrymen, two of whom died of their injuries. Stray bullets break the windows of passenger trains on their way to the Pacific Coast.

CARRYING COMFORT TO THE VERY TRENCHES

A RED CROSS NURSE BRINGING MUFFLERS AND GOOD CHEER TO THE BELGIANS ENTRENCHED NEAR NIEUPORT

EMPLOYER

BY HELEN HOYT

How long he has been looking out of the window.
I know that yesterday his brother died,
But he is still only my employer
I look at his back earnestly,
What does he see out of the window?
What are his thoughts?
In the neat efficiency of this office
Had he forgotten death?
And now he must remember death
And ponder.
What does he feel? What are his thoughts?
About his brother?
About death?
His back does not tell me.
It is only my employer looking out of the window.
I have never thought of him as having brothers:
As weeping:
As stammering love-words
Or prayers,
Or searching God.
I know that he is a man—
That he is real, and alive, and like other men—
But I never thought of it until today.

There is a room next to this room
With walls made of steel.
It is full of letters
Laid away in many cabinets:
Letters and copies of letters, orders, deeds;
Estimates and contracts and receipts.
They are all his.
Many sentences, many figures, many sheets of paper,—
But they do not tell of him.
They tell of costs and prices;
Of shipments and routes and sales,—
Commissions, territory, advertisements, accounts,—
But not of him.
Not of this man whose brother is dead.
Beneath this desk where I am sitting,—
Beneath these rooms,—
Is an acre of desks.
Shoulders are bending, hands write, and feet go back and forth:
All his.
And further down, beneath these floors of desks,
There is a long, high-windowed, booming room
Where strange dark presences of engines live,
Powerful and meek.
Iron punch-presses descend upon their patterns,
With mighty foot, light as a cat's;
Sure, blind, untiring, heavy,
Slow.
Milling knives keep sliding
At their monotonous, accurate cutting.
Before each machine, foot on lever,—
With intent eyes and fingers,—
A man.
And all the energy of man and dynamo,
Engines and furnaces, wheels and whirring belts,—
Belong to this one being.
What does he feel when he remembers this?
How does it appear to him?
I do not know.
I cannot tell at all.
And this factory.
He may look at the bricks and the chimneys,—
At the entrances and the pillars and the many windows,—
And say, *It is mine.*
And almost as his own body is it his,
For he moves and impels it:
As you would direct your feet
Or command your eyeballs to turn.
He makes this room become the building's brain:
He gives this tower of brick muscles and nerves.
To the farthermost confines and edges,—
Woven, interwoven, through wall and floor,—
Go the wires that call and reply:
The signals and buzzers and gongs.
Or, when he will, he may utter his words,
Each tone, into whirling wax;
And lay them away in boxes.
And then, at his pleasure,
Let them be whirled out again from the wax,
Unchanged and undimmed:
To speak for him in his own voice,
Aloud, when he is not by.
And he can make flowing ink articulate for his expression.
Deft fingers strike out his thoughts with the quick-hitting type.
A myriad carriers carry them afar:
For the earth is netted with the pathways of their conveyance.
The mind of this man is multiplied by a thousand minds.
His hands are a thousand strong.
And yet,
Of those whom he wields and uses,
Are there any who understand this being, their master?
Or see—ever—one glimpse of his soul?
Many have not beheld his face
Or heard his voice speak,
Nor have they knowledge of his purposes,
Although they bring them to pass.
He who works with their work,
Who achieves through their achievement,
Who, day after day constrains and impels and expends them,—
He is only a name,
A sound in their ears.
And others, who know well his voice and his face,—
Who move in his close daily presence
And may watch the weavings of his brain,—
To them also he is unknown.
They have no curiosity after his hidden life
And he is not curious to be knowable to them
Nor to any.
Yet he is a man,
Belonging to the race of man,
And all that pertains to any man pertains to him.
Why is he shut out from our understanding?
Why, as I behold him at this moment, am I at a loss?
Puzzled. Indifferent.
I cannot guess his emotion, as I could another's,
Or be moved by it, any degree;
Or desire its comfort.
After all,
I do not care what he believes, or feels or thinks or dreams.
I see him there.
It is my employer, looking out of the window.

THE ALLIES AND AMERICAN NEUTRALITY

BY SYDNEY BROOKS

LONDON CORRESPONDENT OF THE INDEPENDENT

IT is very clearly recognized in England that there is reserved for the United States in this war a part that will test, as it has never been tested before, the capacity of American statesmanship. President Wilson's offer of mediation, made in the first week of the struggle, was put forward, one assumes, without any hope of its being accepted. It was a proposal formulated for the purpose of having it definitely on the record that the United States was neutral, was benevolent, and when the warring nations were in the mood for peace would gladly do what it could to bring them together. The time may come, in most people's opinion it must come, when a blood-soaked and exhausted Europe will turn to the President's intervention with gratitude and relief. When that hour strikes the future not only of Old World civilization but of all mankind may depend, beyond everything else, on the vision that the American mediators bring to their task. American influence, American example, American idealism, backed by a clear purpose and by the conserved strength of 100,000,000 people, will be the factors that more than any other factors will determine whether this titanic conflict is to be ended merely to be renewed later on or whether it is to usher in a veritable reign of peace; whether the gospel of force and the armed doctrine of militarism are to continue to oppress the world or whether civilization can be started on a new path.

We in England, then, foresee for the United States the possibility of such a service to humanity as no power has had even the chance of rendering since the collapse of the Roman Empire. But we also believe that in order to be properly equipped for discharging it and to avoid premature and inopportune action, Americans should understand the origins and nature of the present conflict and should set before themselves a clear conception of the issues that are at stake. That the United States should be neutral is taken by every Englishman as a matter of course. Nobody expected, nobody either contemplates or desires, anything else; nor does any one believe that emergencies are likely to arise which will make the maintenance of American neutrality a matter of any great difficulty. Like all the rest of the world the United States has been, and will continue to be, hard hit by the war industrially and financially. But being so largely self-sustaining it ought not merely to make a moderately quick recovery, but to reach out an effective hand for some of the trade with neutral countries that Great Britain, Germany and France are forced to relinquish.

AMERICAN NEUTRALITY RESPECTED

Like almost all the rest of the world, too, the United States has been, and may continue to be, troubled by the knotty problems of international law that are bound to arise when countries with a world-wide commerce and ships on every ocean go to war; and from time to time it may find its immediate or apparent interests at odds with the obligations of neutrality. If that happens Englishmen are perfectly content to trust to President Wilson's wisdom and fair-mindedness. There is no objection here to America's turning the embarrassments of Europe to its own trading profit, so long as, in doing so, it in no ways assists Germany. We should very naturally, for instance, have been somewhat less than enthusiastic over the idea of the purchase by the United States of the German liners lying in American harbors and of their employment as carriers of food and grain to Holland where German agents are buying up all the meat and corn in sight. But to purchase them in the hope of thereby building up the American mercantile marine and of capturing the carrying trade between the United States and, say, South America or China or any other absolutely neutral land—that, so far as we are concerned, is an enterprise as to the propriety and commercial advantages of which Americans themselves must be the best judges.

Then, again, you will hear in England no word of criticism on President Wilson's exprest disapproval, amounting apparently in effect to his official prohibition, of American loans to the belligerents. And that is not merely because our enormous wealth enables us to dispense with America's financial assistance. It is because we recognize in the President's attitude one more proof of his high and constant regard for the permanent interests of mankind as against the temporary interests of any nation, even his own. So long as the United States continues to send us her surplus supplies of food in the ordinary course of business, we are well content, we can guarantee their safety, and we do not care how strictly President Wilson interprets his duties as a neutral. No incident, in short, is conceivable, with such a man as President Wilson at the head of affairs in Washington, that is at all likely to bring Great Britain and the United States into any sort of disagreement arising out of this war.

As a matter of political speculation it might, no doubt, be possible to show that the ultimate neutrality of the United States depends very largely on the success of the Allies. Some British publicists have rather labored that argument. They have pointed out that a German triumph, the rise of Germany to the position so long and with such general acceptance held by Great Britain, would in the long run be a menace to American interests in South America and in the Pacific; and they have called upon the United States to prepare for such an eventuality by resolutely arming. But that is a view that finds favor only among a very small class. The great bulk of Englishmen do not for a moment entertain even the possibility of Germany's final success in the struggle she has provoked. They are absolutely and immovably confident they have only to hold on, to enroll if necessary army after army, and to maintain their supremacy at sea, in order with the prodigious help of France, Russia, Servia and Belgium to crush German militarism forever. They do not, therefore, anticipate that the contingency of the United States being faced with the alternative of taking one side or the other will ever arise.

THE JAPANESE COMPLICATION

So far the war has produced only one development that threatened for a while, and until its nature was rightly understood, to affect the larger national and political interests of the United States. That development, of course, was the intervention of Japan. I notice that Count von Bernstorff, among his many other activities, has endeavored to raise a prejudice against Great Britain for calling in "the yellow man" to fight her battles. The truth is not only that the attack on Kiao-chau was first suggested by the Tokyo Government, but that it would infallibly have been delivered, whether the alliance with Great Britain existed or not. The Japanese have never forgiven Germany her part in depriving them of the Liao-tung Peninsula after the war with China; nor have they ever forgiven her seizure of Kiao-chau, as naked an act of aggression as even Prussia has ever been guilty of. That they would take the first opportunity of paying off old scores has long been

self-evident to every one except the somewhat myopic statesmen of Berlin. But how very much worse it would now be for American interests in the Pacific if the Anglo-Japanese Alliance were non-existent and if Japan's present move, instead of being taken after full consultation with Downing Street and governed and limited by the terms of the alliance and the wishes of her British ally, were without any of these restrictions.

With that issue reduced to its right proportions, Englishmen detect nothing in sight that threatens to deflect the United States from its obvious and closer course of severe neutrality. Nor would they for one instant have it otherwise. But while an official neutrality is one thing, popular sympathies are another; and in England it is assumed with some confidence that the main weight of American opinion approves both the cause for which the Allies are fighting and the spirit in which they are fighting it. I have known America pretty intimately for nearly twenty years and I am well aware what a steadying, laborious, altogether admirable element in American citizenship has been furnished by German immigration. I am aware, too, of America's, indeed of the whole world's, debt to German philosophy, scholarship and science, and how close and valuable, in particular, are the educational bonds which have united the two countries. But just because I have had so many and such interesting opportunities of studying America at first hand, I am all the more confident of which way the balance of American sentiment in this struggle must incline.

A WAR OF LIBERATION

In England we look upon the war as above all things a war of liberation. But the people to be liberated are not alone the Belgians or the French or the southern Slavs whose independence is immediately menaced. Nor are they only our own folk who would never again know a moment's security if Germany were to triumph. They are also, tho it will be long before they realize it, the Germans themselves. The great and splendid genius of that country, and the quiet, sober, friendly, reflective spirit of its people, are travestied far more than they are represented by the vicious war-caste which has secured dominion over them. I do not mean that they will not fight with sterling heroism and unflinching self-sacrifice to conquer the foes that are now leagued against them. But I am very sure that the time will come when all that is best in Germany will look back on the past forty years as a time of national dementia, alien to the normal instincts of the German people, a showy, feverish period of megalomania and incontinence that did more to pervert than to expand the true spirit of the nation.

"AMERICAN SYMPATHIES MUST FAVOR THE ALLIES"

We see today past any mistaking not only in innumerable books, but in actions that speak louder than the most bellicose Potsdam professor, what it is that the ruling clique in Germany stands for, the principles on which it acts, and the ethical standards by which it is guided. In its conception of the universe nothing is of any account except the sheer mass of organized strength. It represents nearly everything that Americans by training and temperament are most opposed to—the deification of force, and therefore of soldiers and sailors in whom force is embodied, over all civilians and all civil rights; a belief in militant autocracy and a profound contempt for parliaments, a free press and popular liberties; faith in discipline, prohibitions and order and no faith at all in the virtue of the individual; the worship of the machine, whether military or bureaucratic, and a blank indifference to the dignity or self-respect of its units. Three times in the last ten years this aggressive caste has pushed its resolve to the very brink of war. And now that it has achieved its bungling purpose and stands out before all men as seeking the domination of Europe and the destruction of the British Empire, it acts precisely as one would expect it to act.

One need not have spent more than a week in the United States or among Americans to be sure that such a conception of society, of government, and of warfare is utterly alien to the American spirit. The Americans—for this is what it all comes to in the end—believe in democracy; the dominant caste in Germany does not. Once that fundamental fact is grasped, together with its implications, all further discussion of the American attitude becomes unnecessary. We in England simply take it for granted that the preponderant sympathy of the American people must decisively favor the Allies. We do not desire that sympathy to influence American policy in any way, but we are none the less glad to feel and know it is there. In one sense it does not matter what Americans think or in which direction their sympathies point. The opinions of Italy, of Holland, of Rumania, of Turkey and of Denmark are of far more practical moment, as having possibly a direct influence on the character and duration of the struggle, than the opinions of the United States. But altho the judgment of America is most unlikely to lead to any partizan action, none the less all the belligerents feel impelled to lay their separate cases before the American people and solicit a favorable verdict.

MILITARISM MUST BE CRUSHED

The opportunity will no doubt present itself for American statesmanship to utilize this position of respected impartiality on behalf of peace. But I hope that every care will be taken to see that the opportunity is a genuine and not a factitious one. When the Germans begin to realize that things are going against them they will probably throw out vague hints of a desire for peace, hints that might induce a statesman of Mr. Bryan's ardent humanitarianism to make an offer of mediation. The Wilhelmstrasse will not really mean peace. Its aim will be satisfied if it succeeds, or apparently succeeds, in throwing upon the Allies the onus of continuing the war. It may, therefore, be as well to say quite plainly that this is to be a fight to a finish; that the Allies can no more afford to patch up an unsatisfactory peace that would contain within it the germ of a further struggle five or ten or twenty years hence than Lincoln could have thought of compromising with the South after Gettysburg; and that nothing less than the complete overthrow of German militarism will satisfy them. We have not only to strike down and peg down and render impotent for further mischief the most formidable military organization that has yet been built up on this planet, we have also to exorcise the baneful spirit that has made it possible. But Germany is very far from being subjugated yet and still farther from confessing that she is ever likely to be. It will be a long and bloody business before she throws up the sponge. There can be no lasting peace that is not founded on the annihilation of German fighting power and that is not dictated by the victorious Allies in Berlin. Nothing less will suffice. Americans will show their grasp of all that is involved in the war by the extent to which they realize that the subjection of Germany is the essential preliminary to a real peace, and that any premature or inopportune offer of mediation will simply defeat its own purpose. The banner under which all the Allies are constrained to fight bears the fatal legend, "Never Again."

London

MRS. JOHN HAYS HAMMOND AND HER DAUGHTER NATALIE

CHRISTMAS FOR THE WAR CHILDREN

THERE is going to be a Christmas after all for the children of war-stricken Europe. To be sure not quite like other Christmases with their gaily decorated trees, their big wax candles or time-honored mistletoe, or the stockings and wooden shoes put out for old Kris Kringle or Santa Claus to fill, but a real Yule-tide nevertheless, with candy and nuts and toys and warm bits of clothing for the surprized little folk on Christmas morning.

And it is American children and American mothers, thanks to the thought of one little girl, that are thus going to play Santa to their friends across the winter seas.

It was little Natalie Hammond that started the War Children's Christmas Fund. After this grown-up little daughter of Mrs. John Hays Hammond had struggled thru the big awkward pages of the newspaper to read of the sufferings of the diminutive war refugees in Belgium and France, she said to her mother:

"Mama, I don't want you to give me anything for Christmas; send it all to those poor children."

And because Mrs. Hammond was a sympathetic, generous-hearted mother who understood other mothers who had little children, Natalie's wish fell on fertile ground. Today from all over the country the pennies and the dollars and the good things of every description are rolling together with a marvelous rapidity.

Behind the scenes each night at one of New York's largest theaters the actresses between their lines and girls of the chorus are busy at work making little articles of clothing.

Over on Blackwell's Island, where the women-prisoners of the great metropolis are confined, more than three hundred pairs of hands and minds long used to idleness are bending to what is for most of them a forgotten or long-stifled work of mother-love.

The girls of the United States Sub-treasury in Wall street are giving up their evenings that they, too, may add to the tons of warmth and cheer which the steamship companies have promised they would transport free of charge to the needy of Europe. From individuals, from woman's clubs, from Sunday Schools and Churches, from newspapers, and all kinds of public organizations have come contributions which fairly tax the capacity of the temporary headquarters and the volunteer corps of workers that have been gathered around Mrs. Hammond and Mrs. Eva MacDonald Valesh, who act as chairman and secretary of the committee in charge of the fund.

From western New York one woman wrote that tho she had no money to send, she had apples and wanted to know if they would be satisfactory. Quick was the response, and as a result came some three hundred barrels of big red pippins, hand selected and packed with loving care.

Much has been received; more is wanted. Articles, preferably clothing, and things that can be useful during the winter months ahead, are acceptable until the 15th of December. Money can be sent as late as December 24th, when it will be cabled to the wives of American Ambassadors abroad for use in the stricken countries. The address is The War Children's Christmas Fund, 35 West Thirty-ninth Street, New York.

Of relief funds for the war sufferers there are many; there are funds for the Red Cross, and for the wounded and destitute of every nationality; but they are grown folks all. Surely the children are no less worthy of remembrance on the part of big hearted, generous America!

BOBS

WHEN LORD ROBERTS DIED OF PNEUMONIA CONTRACTED WHILE INSPECTING THE INDIAN TROOPS IN FRANCE THE BRITISH ARMY LOST ITS BEST-LOVED LEADER. FOR GOOD REASON. HE WAS P.C., K.P., G.C.B. ("GENERALLY CALLED BOBS," AS TOMMY ATKINS INTERPRETS IT), G.C.S.I., G.C.I.E., V.C., K.G., D.C.L., LL.D., ORDER OF MERIT—AND SO ON—BUT FOR ALL THAT, AS KIPLING SAID, 'E DID NOT ADVERTISE. THIS PHOTOGRAPH SHOWS HIM, AS HE WILL BE REMEMBERED—IN SERVICE

A RESCUE STATION FOR AMERICAN BAGGAGE AT HAMBURG

THE HOMECOMING OF THE TOURIST'S TRUNK

HOW TWO THOUSAND PIECES OF ABANDONED BAGGAGE HAVE BEEN COLLECTED AND BROUGHT TO THIS COUNTRY

THE recovery of two thousand pieces of American baggage from Germany, where they had been abandoned by citizens of the United States last August when the Great War broke out, has brought a delicious suspense into the lives of many thousand ex-tourists. There is the chance that their supposedly lost trunks have been rescued and are awaiting identification along with the rest in the big bonded warehouse of Wells, Fargo and Company Express in New York City. Or there is the cheering possibility that the next cargo of trunks from Rotterdam will include theirs. And finally there is the chance that the brand new steamer trunk, perhaps, or the old suit case bought years ago in Chicago, has been machine-gunned into bits by German skirmishing fire or enfiladed by a Belgian mitrailleuse until the owner would not recognize his property even tho it were laid before him. This has actually happened to some American baggage abandoned near the Belgian-German frontier, according to Edward Page Gaston, the American who is conducting the special baggage rescue expeditions thruout the Kaiser's country. The unusually sturdy trunks used by American travelers were seized upon by both sides, in the emergency of sudden attack, to serve as barricades.

When London was seething with refugees from the Continent last August, Gaston determined to start on a tour of Germany to search for the 25,000 American trunks which the embassy at Berlin had reported abandoned thruout the empire.

He found American baggage simply strewn across the frontier territory. Piles of it were found at little taverns on lonely roads and carefully preserved in station masters' offices on the railways. In Cologne and other larger cities thoro gatherings had been made under the supervision of the local police and each trunk was found numbered, labeled and consigned to Holland ports for subsequent shipment to this country. Everything in reason, reported Mr. Gaston, had been done to preserve the property of their departed guests, and outside of the trunks which were caught between the opposing armies on the Belgian border, nearly everything will eventually be brought back to America.

But nothing had been done to clear the frontier of the trunks because of the unusual pressure of mobilization. Notwithstanding this condition, the German Government placed cars and engines at the disposal of Mr. Gaston to aid him in his work. The railway administrations were prompt and hearty helpers. The apse of the Cologne Cathedral was at one time surrounded by a stack of United States suit cases and steamer trunks higher than a man could reach. Coblentz and Hamburg furnished thousands between them. The attitude of the German officials was remarkably coöperative. At times they strained points to allow the American baggage seeker to pursue his search.

Up to the present time only a small portion of the trunks already brought to New York have been identified and returned to their owners. But they will continue to arrive from Germany, probably thru Rotterdam, for several months to come. Thousands of letters of inquiry, received by the customs officials and the express company, are being classified and prepared for use in the identification work.

The present plans of the customs authorities call for a several months' storage of the baggage in New York, during which time they will be open to inspection for the public. After that it is likely that all the important interior ports of entry will be furnished with the trunks marked as coming from the adjoining states. Redistribution to known owners will be made from these centers, and further inspection permitted. A very large number of the usual customs restrictions on incoming shipments have been brushed away.

EDWARD EARLE PURINTON

EFFICIENCY AND LIFE

A SERIES OF PRACTICAL PAPERS

BY EDWARD EARLE PURINTON

AUTHOR OF "HOW TO BE HAPPY," "THE TRIUMPH OF THE MAN WHO ACTS,' "LORDS OF OURSELVES," "A DAILY GUIDE TO EFFICIENCY"

FIRST PAPER

WHAT IS EFFICIENCY?

Mr. Purinton is an authority on personal efficiency. His aim is to teach the individual how to increase health, human energy, productiveness and happiness. His best known work on efficiency, "The Triumph of the Man Who Acts," was distributed during the first few months after publication to the number of 700,000 copies. A large proportion of the orders for the book came from great stores, commercial corporations and other organizations which have learned the value of efficiency, for distribution among their customers, employees and members. Among such orders were one for 2000 copies from the Pennsylvania Railroad, one for 3000 from the New York Department of Education, one for 7000 copies from the National Cash Register Company, one for 10,000 copies from the Wanamaker stores, one for 25,000 copies for the United States Army. This article will be followed by others on such subjects as "The Day's Work and Efficiency," "Merchandising and Efficiency," "Buying and Efficiency," "Cash and Efficiency," "Home and Efficiency."—THE EDITOR.

RECENTLY I talked with the highest-salaried man in the world. I asked him how he had succeeded.

He quietly answered "I haven't succeeded. No real man ever succeeds. There is always a larger goal ahead."

This multi-millionaire has outrun every rival on earth. But he has not reached the goal of his own satisfaction. He is an efficient man. Efficiency begins with wanting something so hard the whole world can't stop you.

Efficiency is new, and all new things are misunderstood. Conversing with an anarchist labor leader, I chanced to mention the topic. He snorted his sentiments. "I hate the very word," he rampaged. "The idea of ticketing and marketing a man by how many motions an hour he can make is a blot on the American flag," he exclaimed, patriotically. Then he begged me to aid his cause with a few dollars that I had made by studying efficiency.

Efficiency is the difference between wealth and poverty, fame and obscurity, power and weakness, health and disease, growth and death, hope and despair. Efficiency makes kings of us all.

Only efficiency conquers fate. Every man's life is a battleground, with fate and efficiency struggling for possession. Fate is against him, efficiency for him, and all the man's forces are lined up on one side or the other. Where do you stand? Have you marshalled your thoughts, acts and emotions under efficiency's banner? If not, prepare to be assailed, overwhelmed and dismembered by fate.

Efficiency tells us how great men have won their battle with fate, and how we can win ours. Efficiency leads us from a world of chance to a realm of choice, changing us from automatons to men. Efficiency provides our only freedom—that of shaping circumstances and hewing events to suit ourselves!

Look back ten years. Think what you have paid for experience. If you had known then what you know today, how much time, health, money, faith, energy you could have saved. Efficiency offers the only short cut to experience by showing us what other men, similarly placed, have learned and done and been.

What is efficiency?

It is not motion-study, or vocation-test, or cost-saving, or any other mechanical thing. It is not an effort of greedy corporations to reduce their workers to money-making machines. It is not a panic to do so much that you wear yourself out.

Efficiency is the science of self-management.

We have none of us learned it. We feed our kine properly—and dig our own graves with our teeth. We curry our horses beautifully—and neglect to take baths enough to keep us well. We exercize our pet poodle daily—and pant for breath if we run a block. We oil our engines wisely—and allow rust to gather on our brain. We demand a perfect telegraph system—and let our nerves run wild. Man is the only machine we have never learned how to use.

For our ignorance, we pay. It is estimated that seventy-three men out of every hundred are in the wrong job; that most men utilize only about a third of their mental and spiritual forces; that the average American family could live on what they waste; that our business firms lose $100,000,000 a year thru ineffective advertising; that in the United States there are always 3,000,000 persons on the sick list; that the number of preventable deaths each year is 630,000; that the annual waste from preventable death and disease is $1,500,000,000; and that somewhere in this country a workman is being killed every four minutes, and another being injured every four seconds! Do we not need efficiency?

The American slogan is efficiency. We aim at world-supremacy. And the world-master must be first a self-master.

England has had the efficient navy, Germany the efficient army, France the efficient household, Italy the efficient art, Japan the efficient hygiene, Scotland the efficient thrift, New Zealand the efficient government. And America? The efficient *nerve*. We will try anything, and try for anything. Our destiny lies in our daring. Our nation's flag is the stars and stripes because we aim at the stars—and smile at the stripes!

But we waste more than we use—more money, more strength, more time, more thought, more opportunity. We must learn conservation and direction, thru efficiency. Then we shall rule the world—if we deem it worth ruling.

I was just going to ask "Are you

efficient?" But on second thought I see how vain it would be. The only person who knows all about a man is his office-boy, and the only person who knows all about a lady is her kitchen-maid. I assume that you are neither the office-boy nor the kitchen-maid; so why bother you with foolish questions? A better method—a scientific test—appears below.

It is safe to conclude that, if you are engaged in a large enterprise and have not applied efficiency methods to yourself and your associates, you are losing from $1000 to $100,000 a year. If you are an individual, professional or industrial worker, your loss will perhaps run from $100 to $5000 a year. Why go on wasting this money?

The difference between a hod-carrier and the head of a million-dollar corporation is that the hod-carrier works his hod instead of his head. For the hod he has trained his muscles, to the hod he is bound. To get ahead—get a head! The leader of men has trained not only his muscles, but as well his nerves, his brain, his lungs and pores and organs of digestion, his thoughts, actions and emotions, his instincts, habits, aims and ambitions, his financial status and his moral sinew.

How does the prize athlete gain his laurels? By setting a fixed goal, curbing his appetites and passions, living on the scant fare of the "training table," combining rigid self-control with huge self-exertion. The game of business, the game of life, demands as much. And efficiency sets the training table for the man who is going to be a mental, financial or spiritual leader.

Efficiency is the power of doing one's most and best, in the shortest time and easiest way, to the satisfaction of all concerned.

I put this in italics, to make it stand out. And I would recommend that every so-called "efficiency expert" swiftly and humbly paste it in his hat. Your work is not done when you go into a corporation and show the president how to save a million dollars a year. Efficiency is more than speed and economy—it is the re-education and reconstruction of men. No worker is efficient until he would rather work than eat. Man is both a machine and a spirit. You've got to reach the spirit side, to make the machine go. The greatest corporations are doing this, and the success of modern institutions like the National Cash Register Company and the New York Edison Company lies in their habit of making their workers bigger men while making them better machines.

Are you doing your most and best? Do you execute your work in the shortest possible time and the easiest known way? Is everybody satisfied with results—from president to office-boy, including clerks, clients, competitors, and your folks at home? If so, then you are 100 per cent efficient—kindly hand this article to a neighbor who needs it. (You will have no trouble finding him, because you are the only man in the world who is perfect on all these five points.)

The efficient person feels that he *can* do anything—but that he *has* done nothing. When I see the average "self-made" man, pompous and fat and wheezy, I with difficulty restrain myself from laughing impolitely. He looks like a house with the roof blown off, and half the basement caved in. An efficient man, like an efficient house, has four sides. His body forms the foundation, his mind the outer walls, his heart the inner hangings and treasures and pictures, his soul the gable-windows, the tower and the roof. To be merely an intellectual or financial giant is to be the hulk of a man. Efficiency must build on a splendid physique, and must crown its work with a spiritual faith. A dyspeptic is a house with no foundation, an agnostic is a house with no roof.

Now for a practical, personal example. I know a man who has increased by about 500 per cent his daily output of work, his optimism and will power, his health reserve, and his financial resourcefulness. Let me tell you how he did it.

First. He analyzed himself. He discovered what he most wanted to do and have and be, in life. He was not dismayed by the fact that his desires looked about as unattainable as the moon. He said nothing, and took the next step. (What makes a dream visionary is not the dream but the do-lessness of the dreamer.)

Second. He studied his possibilities and limitations, physical, mental and spiritual. By consulting authorities on athletics, higher metaphysics, vocational training, physiognomy, phrenology, astrology, cheirology, graphology and experimental psychology he learned that his ambitions lay within the reach of his natural gifts. (We may remark in passing that these methods of character-reading are not infallible, and few of their exponents are reliable; they contain, however, sufficient truth to make them valuable in choosing a career.)

Third. He read the lives of the world's great men who had been leaders in his chosen field. He formed the acquaintance of living leaders, thru mutual friends. He saw that he was out of gear in certain ways—and he proceeded to repair his faulty machinery, of body, brain, equipment and environment.

Fourth. He resigned his position in a dignified profession; and got a menial, trivial job that paid next to nothing. The job was in line with his goal—the profession was not. And $5 a week in a place with an open door is a better wage than $50 a week in a place that leads nowhere.

Fifth. He made the most of his job. The men who look for a job are so many because the men who look into a job are so few. Every job is a gold-mine of possibility; but you must work it by seeking and digging in your spare time. This youth took up motion-study, time-study, tool-study, and other methods of modern "scientific management." He learned to save two hours a day; which he spent in talking with men higher up, in reading trade books and magazines, in experimenting on ways of improving his work, and in planning his line of advance.

Sixth. He observed that he was handicapped by the presence of chronic ailments and disorders, which resulted in fatigue, headache, irritability, auto-intoxication, and other hindrances to good work. He read up on hygiene, found that no disease is incurable, stopped the use of drugs, changed his methods of eating, began to take regular exercize and a morning sponge, kept his chamber window wide open, did a few more sensible things that most people don't do till they have to—and presently watched his troubles disappear. By adopting health habits, he increased the daily output of energy at least 200 per cent and got so much more done.

Seventh. He changed his mind (This is supposed to be a custom for ladies only, but men's minds need changing oftener because they get soiled quicker.) This man was naturally a pessimist and grumbler, harsh, cruel, hasty, blunt, surrounding himself with enemies and worries. Gaining sense enough to see what a fool he had been, he applied himself to a systematic cultivation of optimism, faith, tact, patience, tolerance, courtesy, and other mental factors in efficiency. Having grown friendly-minded, he attracted thousands of friends. And his work prospered accordingly.

Eighth. He arranged to secure the best available counsel; coöperation; financial, industrial and moral support, from his associates inside and outside the business.

Ninth. He discerned that specific moral qualities were needed in him to produce leadership; so he devel-

PERSONAL EFFICIENCY TEST

DIRECTIONS. In answering questions write 100 for "Yes," 0 for "No." If the answer is a partial affirmative write the number between 0 and 100 that expresses the degree of assurance. Then add the column of percentages, divide the total by 30, and the answer will be your approximate grade in efficiency. The value of the test lies in the honesty of the answers.

		ANSWERS (in per cent)
1.	Do you like your work?	
2.	Have you learned the best, quickest and easiest way of doing it?	
3.	Are you thoroly informed on "scientific management?"	
4.	Do you know where your greatest power lies?	
5.	Have you a fixed goal, in line with your supreme talent?	
6.	Do you believe absolutely in your own future?	
7.	Are you in perfect physical health?	
8.	Have you learned how to get well and keep well?	
9.	Can you be optimistic, under all circumstances?	
10.	Do you realize which of your habits, thoughts or emotions make you inefficient?	
11.	Have you made an inventory of your mental and moral traits?	
12.	Are you correcting your known weaknesses; mental, financial, social or spiritual?	
13.	Have you discovered which foods, baths and exercizes increase your energy and heighten your mentality?	
14.	Do you breathe deeply and hold an erect posture?	
15.	Is your sleep long and dreamless and refreshing, with your sleeping-room perfectly ventilated?	
16.	Do you drink three pints of pure water daily?	
17.	Do you eat slowly, moderately, regularly?	
18.	Is all your clothing made loose, to allow blood and nerves free play?	
19.	Are you independent, fearless, positive?	
20.	Are you tactful, cautious, courteous?	
21.	Have you secured the best possible advisers and associates?	
22.	Are all your co-workers eager to help make your plans a success?	
23.	Do you wish your rivals well, and never speak ill of them?	
24.	Do you work harder than anybody else in the business?	
25.	Have you learned the science of planning your day ahead?	
26.	Can you relax entirely in your leisure hours?	
27.	Are you saving money systematically?	
28.	Do you enjoy art, music, literature, and the presence of little children?	
29.	Does your highest ambition include some real service to Humanity?	
30.	Have you a great love in your life, to steady, cheer and empower you?	

NOTE. A complete Efficiency Test would include other vital questions, but answers to these will furnish a self-analysis of approximate reliability.

Divide the total by 30

The quotient shows your percentage of efficiency

Copyright, 1914, by Edward Earle Purinton

oped courage, will power, conviction, enthusiasm, inspiration—as athletes develop physical muscles.

Tenth. He married the woman of his heart, and she made him do the impossible, to reach her ideal of strength and wisdom in a man. (This was not a part of his efficiency scheme. In order to be sure they will get discipline the good Lord lets men think they are marrying for happiness—else would they never marry.)

The result? A few years ago this man's wages were $4 a week and board. He is today master of three different lines of work, any one of which would yield a splendid income. And the mental and moral gains have been even greater.

Now for the application. You and I can't follow the particular method of any other man on earth; but we can recognize the scientific principles in the foregoing history and apply them in our way.

The first move toward efficiency is to find how much we need it. When a man's grade falls below eighty per cent in college, he is considered a poor student, either very lazy or very dull. Yet in the foregoing self-examination for the school of life, not one person in a hundred reaches eighty per cent. Go over the questions and figure out where you stand. Then give a copy of the Test to each member of your family, club, class, or business organization. Properly used, the Test is worth more than a year of academic study, which costs perhaps $500.

I judge that on this Test the average grade is forty per cent.

This means that the $40-a-week man could, and should, earn $100—and then be less tired and worried than he is now. What is your income? What might it be, on this ratio? Efficiency measure is money, and every item of this Test has a money value.

But the efficient man does not put money first. The pulse of the battle, with Fate and surroundings and himself; the call of an unconquered world to gigantic effort; the inspiration of heroic deeds by other men; the might of self-rule and the joy of self-expression; the loves of the heart and the longings of the soul; the far, lone gleam of destiny; these things nerve and impel the efficient man to do always more and be always greater. Part of you is spirit—part of you machine. Listen to the spirit—then grip the machine!

New York City

THE INDEPENDENT EFFICIENCY SERVICE

The Editor takes pleasure in extending to the readers of The Independent the services of Mr. Purinton as an efficiency expert. Mr. Purinton will answer, either thru the pages of The Independent—without using the inquirer's name—or by personal letter, any question that may be asked in relation to personal efficiency, health, work, and business. Questions should be confined to one sheet of paper and address to The Independent Efficiency Service, 119 West Fortieth Street, New York.

THE GREAT BATTLESHIP—A SUPER-DREADNOUGHT—GOING DOWN, HER PORT DECK PARTLY SUBMERGED AND HER

On Board S. S. "Olympic,"
Lough Swilly, Ireland, Oct. 30, 1914.

SINCE I wrote the earlier report we have had most thrilling experiences. Tuesday morning, soon after breakfast, as we were off the coast of Ireland, but not in sight of it, we saw four or five miles away a British dreadnought, a cruiser and a torpedo boat. We made toward it, and found H. M. S. "Audacious," flying signals to us to stand by—that she was sinking.

Waves were breaking over her decks. In the rough sea she seemed to be going down astern, with a heavy list to the port, as tho she had been torpedoed or hit by a mine on the port side aft of amidships.

After every heavy sea water broke over her side in a miniature waterfall. The whole crew of 960 men were on deck, all standing as erect as ninepins, those at the stern with waves breaking over their feet. . . .

All our boats were lowered and manned and sent off to take the crew from the "Audacious."

The battleship launched one of her own boats full of men, but a huge wave dashed it against her side, capsizing the boat. All the men were picked up in no time by small boats from the cruiser and the destroyers.

THE SINKING OF H. M. S. '

Picture © by International News—

Meanwhile the "Audacious" was making efforts to a heavy cable to the "Olympic."

A trawler, flying the Swedish flag, had come up, with fine seamanship in a heavy sea she picked up heavy cable from the "Audacious" and brought line to the "Olympic."

We were informed the lighter cruiser, a gunboat several destroyers were not of the slightest use, as could not tow the great battleship, but that the "O pic" was going to try to get her into shallow w before she sank.

At last the heavy cable was made fast, but a mor after the "Olympic" started the heavy sea made it possible to regulate the strain on the cable. With 45,000-ton ship on one end trying to pull a 30,00 battleship on the other, the cable broke under strain.

As a last resort the "Olympic" then tried to drop own anchor cables (the longest in the world), but trawler was unable to pick them up, and the dr

Courtesy of the New York American

sought, with all her engines out of commission (we were told her engine rooms were flooded), was powerless to lift the "Olympic's" heavy cable herself and get it on board.

The whole afternoon was spent in trying. We had found the sinking battleship just after breakfast, and it was now getting dark. More than three-quarters of the crew of the "Audacious" had in the meantime been taken off to the cruiser and a gunboat, which was also hovering near.

About 200 men remained upon the "Audacious"—all on deck, waiting calmly, with a little knot of officers under the signal flag fluttering from her only mast, and the great battleship seemingly getting lower and lower in the water while everybody was waiting helplessly.

This was the sight until the last vestige of light was gone. Perfect discipline seemed to prevail on all the ships. There was no confusion—not a shout or a sound came to us from the sinking dreadnought.

Experts told us the battleship's magazine might explode at any minute, but there was no excitement. After dark the rest of the crew were taken off the "Audacious" and put aboard the cruisers and destroyers to await morning, and a salvage crew summoned from Liverpool by wireless. We all wondered if the stricken battleship would survive the night.

The "Olympic" was ordered by the Admiralty during the night to proceed to Lough Swilly, on the north coast of Ireland, "for safety." A squadron of the British navy, it was said, was already there, including four dreadnoughts, the flagship "Marlborough," five battle cruisers and many gunboats and destroyers—a regular armada.

The "Olympic" got under way and was going at less than half speed when the greatest noise I ever heard in my life made us all nearly jump out of our skins.

A huge red semi-circle of lurid light at least 1000 feet in diameter flamed into the skies astern of us, and in about thirty seconds all was black again. . . .

The magazine of the splendid "Audacious" had blown up. Thus one of the greatest battleships in His Majesty's navy had sunk and $12,500,000 had gone to the bottom.

WHAT EFFICIENCY MEANS

WILL-POWER, THE TAP-ROOT OF EFFICIENCY

BY CHARLES W. ELIOT

PRESIDENT EMERITUS OF HARVARD UNIVERSITY

THE European war has set all observers admiring German efficiency in organizing and equipping armies, and in invading foreign territories at a few hours' notice. My concern has been with efficiency in education, and my views about training youth to efficiency doubtless color my views about efficiency in operatives, mechanics, professional men, soldiers and citizens. By efficiency in the individual, I mean effective power for work and service during a healthy and active life. An efficiently conducted industry, to my thinking, is one which utilizes profitably in hundreds of men and women these effective powers for work and service in the individual. An efficient nation is a nation made up, by aggregation, of individuals possessing this effective power.

Marceau

FRANK A. VANDERLIP

To bring about national efficiency the education of the youth should accomplish the initiation in each individual of mental processes in large variety, and the establishment of good mental habits, with incidental acquisition of information. Education for efficiency should provide training of the bodily senses, and instruction in the care of the body; for bodily excellences and virtues count much toward efficiency. The habit of quick and concentrated attention is the most valuable of all mental faculties, being the main source of the productiveness of extraordinary workers, and in less degree of common men and women. In all walks of life the efficient man is the thinking man who has a firm will. Will power is the tap root of efficiency. The individual who is incessantly subject to authority does not have a good chance to develop his will power. Liberty gives the individual's will exercize and makes it robust. The training of the will to the wise use of liberty is the best means of developing individual strength of character and national greatness. Liberty alone fits men for liberty.

There is an efficiency which can be brought about in a machine shop or a factory, by compelling the workman to make all his movements, in producing his bit of the machine or the fabric, in a manner determined for him by another, and repeated indefinitely without modification; but this is not the happiest sort of efficiency. In war, efficiency requires absolute subordination of multitudes of individual wills to a single will, war being a horrible work which proceeds on compulsion and authority from beginning to end. The soldier must obey orders at every moment, and, indeed, finds in his orders the justification for the horrible things he must do. This is the fundamental reason that war is not a civilizing, but a barbarizing agency. Civilization advances in

F. C. HENDERSCHOTT

LOUIS D. BRANDEIS

spite of war, not because of it, or by means of it.

The motive power in life—individual or national—is sentiment or idealism. An evil passion, or an irrational panic, may give great physical or intellectual powers a terrible efficiency for a time; but there are also beneficent enthusiasms or devotions which pervade simultaneously multitudes of human beings and give them an inexhaustible effectiveness. The highest efficiency, therefore, whether in industries, or in the pursuit of knowledge and truth, must always be the result, not of utilitarian motives or routine processes, but of gregarious idealism and humane passions.

Cambridge, Massachusetts

EFFICIENCY AND SOCIAL IDEALS

BY LOUIS D. BRANDEIS

AUTHOR OF "SCIENTIFIC MANAGEMENT AND RAILROADS," SPECIAL COUNSEL TO THE INTERSTATE COMMERCE COMMISSION

EFFICIENCY is the hope of democracy. Efficiency means greater production with less effort and at less cost, thru the elimination of unnecessary waste, human and material. How else can we hope to attain our social ideals?

The "right to life" guaranteed by our Constitution is now being interpreted according to demands of social justice and of democracy as the right to *live*, and not merely to exist. In order to live men must have the opportunity of developing their faculties; and they must live under conditions in which their faculties may develop naturally and healthily.

In the first place, there must be abolition of child labor, shorter hours of labor, and regular days of rest, so that men and women may conserve health, may fit themselves to be citizens of a free country, and may perform their duties as citizens. In other words, men and women must have leisure, which the Athenians called "freedom" or liberty. In the second place, the earnings of men and women must be greater, so that they may live under conditions conducive to health and to mental and moral development.

Our American ideals cannot be attained unless an end is put to the misery due to poverty.

These demands for shorter working time, for higher earnings and for better conditions cannot conceivably be met unless the productivity of man is increased. No mere redistribution of the profits of industry could greatly improve the condition of the working classes. Indeed, the principal gain that can be expected from any such redistribution of profits is that it may remove the existing sense of injustice and discontent, which are the greatest obstacles to efficiency.

Boston, Massachusetts

EFFICIENCY AND THE CITY

BY JOHN PURROY MITCHEL

MAYOR OF NEW YORK CITY

IT is only within the past five or six years that the word "efficiency" has been incorporated into city vocabularies. Seven or eight years ago, when I was commissioner of accounts in New York City, it was often claimed that genuine efficiency

Crawford
WILLIAM R. WILLCOX

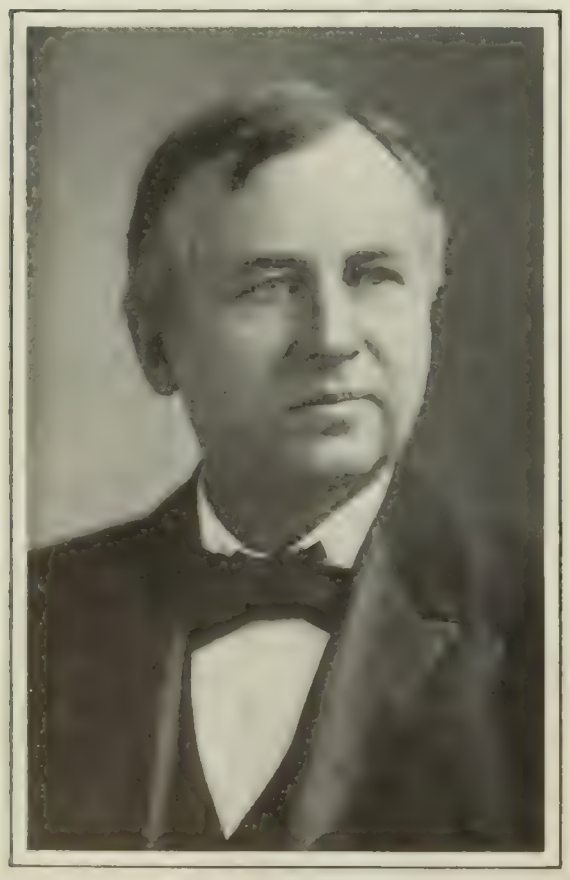
Pach Brothers
CHARLES W. ELIOT

was beyond the range of possibility for city government, because of the influence of politics, legal obstructions, citizens' indifference and general official incompetence.

Since that time in practically every important city in the country definite measures have been taken to promote municipal efficiency thru the organization of special bureaus in the city government or outside the city government. We have now gone so far in New York that even Tammany Hall asks for votes on the efficiency records of its candidates and supports a bureau with the avowed purpose of furthering the efficiency of the city government. The gospel of achieving results in a clean cut, direct way—results which are worth while and in the public interest—has become the creed of every alert and progressive city administration in the United States.

We are still, however, finding out how best to do the work of American cities efficiently. We cannot transplant the methods of other nations where more thought has been given to municipal government because, as a rule, they do not fit in well with local habits of thought and popular desires. We cannot transplant all of them from private business because many of the problems of city government are special in character and relate to fields with which private business has had no concern.

We are concerned in New York not only with finding out how to do better the work which we are already carrying on, but what work we need to do in order best to develop a city government which will meet



DR. LUTHER H. GULICK

the social and economic needs of the city. Once the city government begins to feel the exhilaration of accomplishment, it is not difficult to increase the effectiveness of work and enthusiasm of employees or to substitute economy for slovenly expenditure, but it is a bigger problem to find out how to redefine and redirect the work of health, police, correction, charities and school departments so that we can pave the way for a better city life, as well as deal with day by day necessities. This is what we are trying to do in New York City under the present administration—not only working out the "how" of city government, but the "what" of city government activities as well. This is the big problem of efficiency.

No organization is efficient which merely carries on its routine activities with dispatch, economy and good workmanship. To be efficient, an organization, particularly a public organization such as a city government, must look forward and readjust its service, so that its work may be not only statically efficient, but progressively effective.

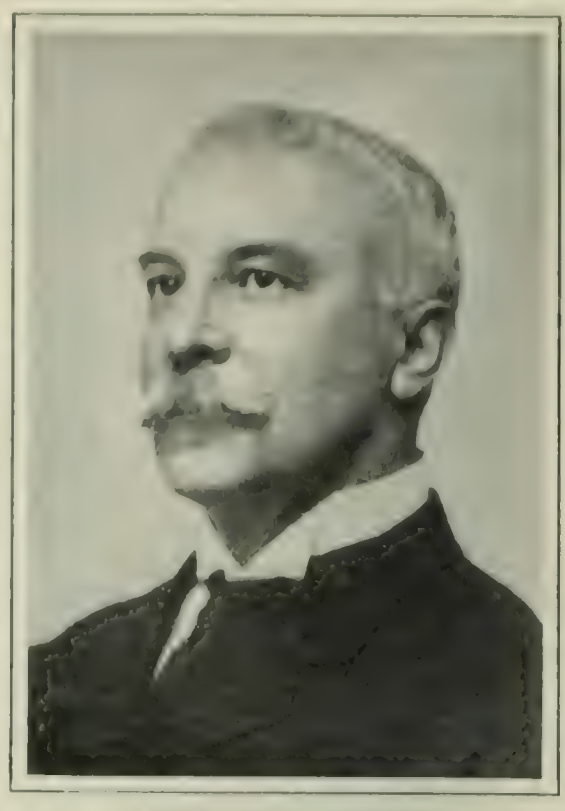
New York City

JOHN WANAMAKER

THE NEW EFFICIENCY OF THE SPIRIT

BY LUTHER HALSEY GULICK

FORMER DIRECTOR OF PHYSICAL EDUCATION IN THE NEW YORK PUBLIC SCHOOLS, AUTHOR OF "MIND AND WORK," "THE EFFICIENT LIFE," ETC.

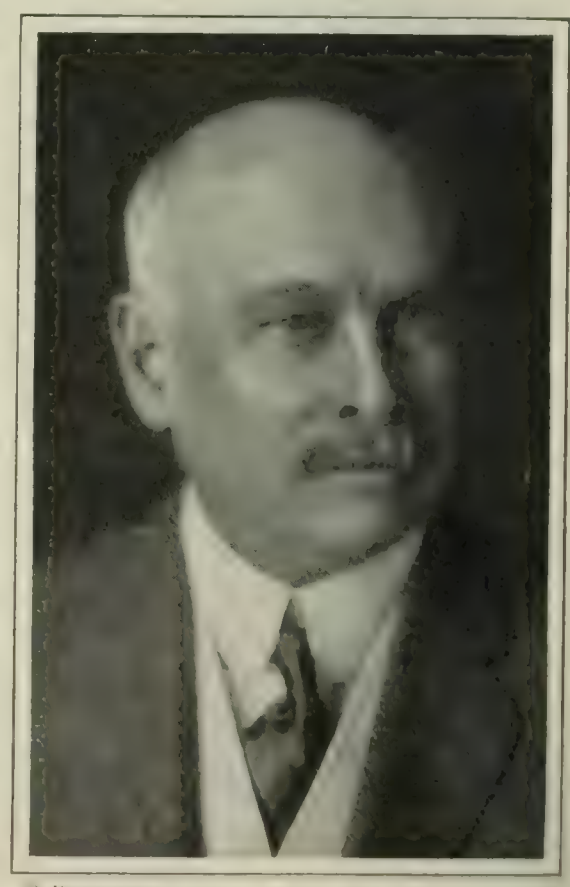


I AM asked to address a few words on efficiency to the nation builders of the future, the young men and women readers of The Independent. To you I would emphasize the new opportunity for scientific human service which is now distinctive and peculiar to the new era.

The world that you face is a different world from the world that we —the previous generations—have faced. You have a new and splendid possibility which did not exist when we were young.

This new thing—this new world that is open to you, is the possibility of making friendship, comradeship, happiness, idealism and romance the common possession of all, just as we have made shoes, clothing, watches, chairs, knives, windows and food for all; that is, you can do for the spirit of man what we have done for material things. We have made what were once the proud possessions of the favored few available for all. You will make those human relations of beauty and power and happiness that were the achievement of the favored few available to all and actually achi ved by the many.

Can you develop the geniuses who will parallel in the social world what our inventors have done in the world of steam and electricity? Can you then create social self-supporting institutions that shall take these social inventions and so put the power of organization, publicity and finance behind them that they shall be as widespread as the telephone, the "movies" or the telegraph? In other words, can you produce conditions that will bring forth the social expert, and can you create the organization to use his genius?



This is the task before your generation. It was our task to organize the great world of industry—to tame the forces of nature, steam, electricity, water power—harness them in great machines and drive them to do the material work of the world. This we have done fairly well.

HARRINGTON EMERSON

We have taken the work of the world from human backs and have placed it upon machines. Slavery even in its figurative sense is fast going; but we have not made friendship, comradeship, social life, romance, the common lot of all, even tho it is as necessary as are food, shelter and clothing. But this was not our task. The day for community social life could come only when we had a community physical life.

You have the material basis for this glorious new opportunity. If you

© Baumann

JUDGE ELBERT H. GARY

can do for the affections as brilliantly as we have done for the industries, then it will be true that love and beauty in life shall flower and fruit for all as it has done hitherto only in rare and isolated cases. To make this true is the supreme task and hope of humankind.

New York City

THE QUICKER WAY

BY WILLIAM R. WILLCOX

PRESIDENT OF THE EFFICIENCY SOCIETY, FORMER CHAIRMAN OF THE NEW YORK PUBLIC UTILITIES COMMISSION

EFFICIENCY is certainly a misunderstood and misapplied word. To many it means system, celerity and detail. Such is not the case, as efficiency is first of all thoughtfulness and getting the best results with the best methods.

Efficiency is not scientific management, nor is it any system or device. It is in everything we do—in our work and play.

All of our present systems of management are worthless without the fundamental element of personal efficiency, the desire of the worker to show better results. It is with this aim in view that universal publicity may best aid the efficiency movement.

The Efficiency Society was founded to exchange information on new ways and ideas and to coöperate with other movements having similar purposes. This has been accomplished mainly thru the publications issued to the members of the society, and in this way a keener desire has been aroused for better methods.

At the present time a very great opportunity is open to the American people for their rapid development in supplying the demands arising out of the inactivities of European manufacturers.

It is by educating people into better, easier and quicker ways in their daily work that our national weeklies can be of service.

This country will become the leading nation in all lines of endeavor, and it will only be thru educating the people in more efficient ways that the country can live up to this opportunity.

New York City

PRACTICING EFFICIENCY

BY HARRINGTON EMERSON

EFFICIENCY COUNSEL FOR THE UNITED STATES NAVY. AUTHOR OF "THE TWELVE PRINCIPLES OF EFFICIENCY"

EFFICIENCY, like courage and cleanliness, is an attribute of the soul. Most people are pusillanimous, unclean, inefficient. Nature is, on the whole, very efficient. Wild animals, wild plants, even chemical

reactions and crystallizations do the best that is possible under the circumstances.

Because most people are naturally timid, unclean, inefficient, they must be trained. The invention of soap in France in the sixth century did more for human cleanliness of person, garments and dwellings than all the preachments on the subject ever uttered, yet preachments stimulate the use of soap. Modern plumbing and bathtubs have made soap more effective, but we still need preachments as to cleanliness.

So with efficiency. There are some born efficient. I have seen young children deliberately efficient. Babies generally have high standards as to elemental comforts and insist vociferously on their realization.

It is therefore well both to preach efficiency and to provide means and devices wherewith to help efficiency aspirations and proclivities.

Let all, however, beware of mistaking the possession of a piece of fancy soap and of an enameled bathtub for cleanliness. The Japanese peasant, whose clothing does not cost $0.50 a year, is personally more clean than ninety-eight per cent of some nations who consider themselves the torchbearers of civilization.

The way to keep clean is to use soap and hot water.

The way to be efficient is to practice efficiency twenty-four hours a day until it becomes second nature, when not inborn.

New York City

CONCENTRATE AND CO-OPERATE

BY FRANK A. VANDERLIP

PRESIDENT OF THE NATIONAL CITY BANK OF NEW YORK

WHAT is needed, of course, the country over, is greater efficiency, both in its broad aspects and in its relation to the daily routine of the average employee. We need greater efficiency in legislative circles, as well as in business, and above all, we need that efficiency which comes about thru coöperative thought and action.

Never did the country need this coöperation more than it does right now. The problems which present themselves because of the unprecedented world-wide conditions make pioneers of us all, and generally speaking, our efficiency can be increased so greatly by putting aside individualistic motives and desire for personal or institutional aggrandizement that it is an imperative duty for all to eliminate personal lost motion and unite in communal effort.

The building of efficiency depends upon ability to promote sincerity of purpose and mental concentration. Most of our futile effort results from mental distraction. People from the highest positions to the lowest clerkships must, thru personal concentration, develop the ability to put all their mentality upon a given task. A mind can be trained to this just as muscles can be trained for some form of physical effort.

Of course, there are varying degrees of natural ability, but all natural ability can be so much developed by constant thought directed to the strengthening of the weaker parts of one's character, that the molding of the mind must be a primary consideration in any effort for efficiency.

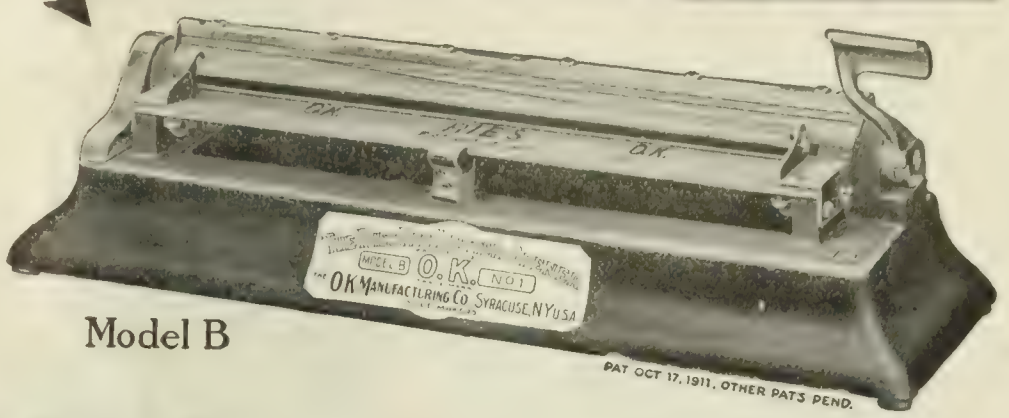
Upon this can be built, of course, the more elaborate structure of efficiency mechanism, but I think in most cases this mechanism is far too elaborate and does not start at the root of inefficiency.

A continual endeavor to inculcate in the minds of all employees, in important positions or lesser ones, that it is lack of maximum interest and full concentration that keeps the average of efficiency down, will produce surprizing results. This, of course, is a question of the personal equation and the personal factor, but it is not Utopian. It is practicable and has been found so in our own institution.

New York City

PRIME FACTORS IN EFFICIENCY

BY JUDGE ELBERT H. GARY



CHAIRMAN OF THE UNITED STATES STEEL CORPORATION

THE editor of The Independent asks me to name the first seven factors in efficiency. I would name these: Health, character, education, ambition, equipment, environment, reward. In each of these factors the employer has a direct responsibility; and the friction between capital and labor will be reduced just to the extent that each bears, willingly and effectively, the proportion of responsibility that is just and equable. The services of physicians, advisers, instructors, efficiency engineers or experts in scientific management are indispensable to most business enterprises of magnitude and worth. But I deem the recognition and adoption of right principles of vastly more importance, and would here call attention to some of the general business truths that seem to underlie the production of efficiency on a large scale.

Employers should never for a mo-

The **RIES** LETTER OPENER

GUARANTEED TWO YEARS — THE NEW WAY 75% TIME SAVED

Model B

The Ries Letter Opener saves **75% in time** and eliminates the annoyance incurred by opening letters the old way.

No Office Appliance is more necessary than a machine of this type, the one missing link in office equipment; if there is one thing more than another which requires rapid work and over which more time has been lost, it is in opening the mail.

The Ries Letter Opener has the advantage of few parts. The beauty of its design and finish is most pleasing. It removes only ten one thousandths of an inch from the envelope, therefore, the liability of cutting enclosures is virtually impossible.

The Ries Letter Opener embodies the best workmanship and materials. Made in 3 sizes, each size adapted to easy handling for desk use.

No. 0B., Dimensions 11¼ in. X 3⅝ in. X 2¾ in.; Weight 4½ lbs.; opens envelopes 6¾ in. and under; $12.00.
" 1B., " 15½ in. X 4 in. X 3½ in.; " 6½ " " " 10½ in. " " 15.00.
" 2B., " 17⅛ in. X 4¼ in. X 4¾ in.; " 8 " " " 12 in. " " 18.00.

The No. 0B is designed for individual use and for offices receiving light mails.

The No. 1B is recommended to all offices, excepting those receiving a large number of extra long envelopes to whom the No. 2B machine is suggested.

STERLING DESK CO., Dept. E-11, Grand Rapids, Mich.

ment lose sight of the interests of their men. We have more than once voluntarily advanced wages. We demand the best labor, and the best labor in turn demands the best pay.

The elimination of wasteful strife in industry and commerce is fundamental to efficiency. The real problem of employer and employee is to find the one course of policy and action that sacrifices neither to the other, but that holds mutual advantage. There is always one such course, and our aim should be to find it.

Not only is the crushing of competitors wasteful and harmful, but actual friendship may continuously be applied to competitive business.

Every honest corporation welcomes criticism and investigation, properly made and conducted. There is no moral or economic reason why the books of a corporation should ever be closed to legitimate inquiry; publicity always makes for both righteousness and efficiency.

The key to optimism is altruism; I have observed that the men who can never be dismayed by adverse business conditions are the ones who have a higher and broader motive for work than the mere piling up of riches. Ultimately, efficiency is based on a philosophy of life which considers first the claims, needs and deserts of the other fellow. The men of the greatest deeds are the men of the greatest faith, and the men of the greatest faith are the men who are fair.

For the building of an efficient organization, the first rule is that the heads of it observe the duties of the employer and the rights of the employee. Generous motives, fair principles and honest dealings are vastly more important as efficiency measures than the technical phases of skilled management and economical production. Next to the faith of the customer in the product, the faith of the employee in his employer becomes a vital factor in the efficiency plan of the concern. To create and preserve a kindly feeling among our workers by according them the proper treatment, equipment and environment has been perhaps our chief object of endeavor and rule for success.

One of the first steps toward efficiency is to safeguard the life, health and comfort of employees. The United States Steel Corporation has expended since 1906 more than $5,000,000 on sanitation and precaution as exprest in the slogan "Safety First." Consequently, serious and fatal accidents have been reduced forty-three per cent, and over 2300 employees now escape injury every year who would have been killed or

disabled without the benefits of our "Safety First" campaign.

A sanitation committee sees to it that the employees have pure water to drink and that living and working conditions are as favorable as possible to health and efficiency. There are shower baths, swimming pools, gymnasiums and playgrounds, cheap, wholesome meals, vacation facilities, industrial classes, and visiting nurses to make good its program.

Environment counts for efficiency. The comfortable cottages which we furnish to many of our miners and factory people, and the well-kept lawns and gardens, for which prizes are offered, have a marked effect on the spirit and character of our employees.

Our total annual expenditure in all branches of welfare work is approximately $7,240,000. We have found this a good investment on two grounds: First, because it creates a personal feeling of human relationship between employer and employees, with loyalty, interest and emulation taking the place of envy, apathy and criticism; second, because it prevents a loss perhaps larger thru avoidable strikes, fires, breakage and lawsuits over accidents.

Some of our employees of long standing are stockholders as well as pensioners; when a man possesses even an infinitesimal share of stock in his employer's company, the pride of ownership and joy of creatorship grow appreciably in him. I look forward to the time when every worker in a business will be part owner of it.

New York City

RECREATION FOSTERS EFFICIENCY

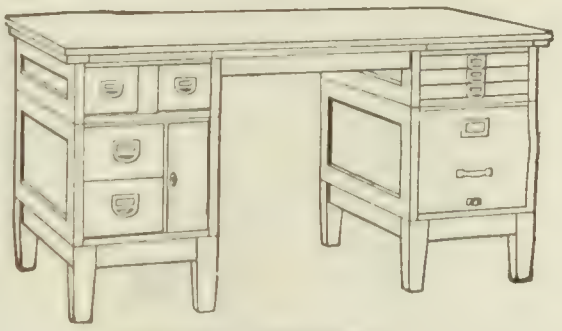
BY JOHN WANAMAKER

MERCHANT AND FORMER UNITED STATES POSTMASTER-GENERAL

PERSONALLY I prefer the word "service" to "efficiency." Whatever success has been attained by our two large stores in service to their respective communities is due largely to the education of our employees. The work of education is carried on thru the medium of the John Wanamaker Commercial Institute, in which the younger employees of the store are students, and thru the American University of Trade and Applied Commerce, a chartered institution, which provides postgraduate courses for all of those who are connected with the establishment. It would be impossible within the confines of an article such as you request to go into detail as to the work being accom-

Efficient Arrangement at No Cost

Why have a desk arranged just like everyone else's? Your business is different—your desk should be suited to it. Why not get a "Desk with Brains," made of sections so as to meet your individual wants exactly?



Browne-Morse Cabinets

include a complete line of filing equipment built of choicest hardwoods in beautiful designs. They will make your office elegant, distinctive and attractive in appearance.

Let us help you select and arrange your office equipment. Our advice is free. Write for interesting literature and suggestions on efficient arrangement.

Browne-Morse Company

2511 McKinney Ave., Muskegon, Mich.

"The Desk with Brains"

THE LIGHTEST TOUCH TYPEWRITER IN THE WORLD

IS BUILT IN THE GOOD OLD U. S. A.

For touch of the Fox Typewriter and always has been exactly the same.

It takes a [illegible] to print a letter on other typewriters, and only a [illegible] to print a letter on the Fox Typewriter, then there is a saving of [illegible] per cent. in time and energy, by using the Fox Typewriter.

A typewriter operated for one year on letters, on the Fox Typewriter, in four years, all the typewriters [illegible] at work. By using 4 ounces on each character printed [illegible] 4,960 tons of energy in the four years, *or nearly enough to lift the Empire State Building.*

He writes, "I did not spend a cent for repairs or make a single adjustment to my typewriter."

AGENTS AND DEALERS WANTED EVERYWHERE

If we are not now represented in your city, write us for special introductory offer on sample typewriter and wholesale prices to Agents and Dealers. Easy payment terms, if wanted. Then close deal. Mention The Independent.

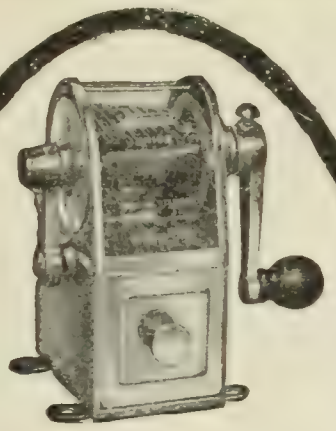
plished thru these schools. Suffice it to say that the aim is to make it thoro and practical to the fullest extent.

The diversions of the employees of the Wanamaker stores are varied and far-reaching, a few of which are as follows: A cadet battalion, 500 strong, composed of the boys of the store, who officer themselves and drill regularly under competent military instructors; a military band; a drum and bugle corps; a girls' battalion, with their own band, bugle and drum corps; junior and senior choruses; orchestras; literary and dramatic clubs; a large drilling floor and gymnasium for basket ball, athletics, etc.; an athletic field and running track, within easy distance of the store, for baseball, tennis and other out-of-door games; barracks and commodious drilling grounds at Island Heights, New Jersey, on Barnegat Bay, where hundreds of our employees from both stores spend their vacations amid ideal surroundings; scores of classes conducted thru our Women's League for mutual improvement in things musical, domestic, literary, social, health of body and mind; a beneficial association; a building and loan society; savings clubs; a pension fund; classes for the study of finance and development of the young men of the business; helpful lectures, frequently given, with the best motion and stereopticon pictures; a business club composed of the leaders in the business.

The health of the employees is looked after by a corps of physicians and nurses, with a well equipped hospital, to facilitate their efforts; a dentist is in attendance to care for the teeth of our people, also a chiropodist for those whose duties compel them to be on their feet more or less; last summer the store introduced the full Saturday holiday, in addition to the usual two weeks' vacation, giving its employees an opportunity to leave the city Friday night and not return until Monday morning—two full days of rest and recreation.



It has always been my belief that the business owes more to its employees than the mere opportunity of making a living.

EDUCATION FOR EFFICIENCY

BY F. C. HENDERSCHOTT

FOUNDER OF THE NATIONAL ASSOCIATION OF CORPORATION SCHOOLS

THE National Association of Corporation Schools, which now embraces eighty-two corporations and includes forty-eight different branches of industry, recognizes that if American industries are

to extend their foreign commerce, and, in many lines, if they are to hold and increase their domestic business, it will be absolutely necessary to train their employees better. Public utility corporations are more often attacked by the public because of poor service than on account of excessive rates. Many industrial institutions with excellent manufacturing facilities have failed because of poorly developed sales organizations; the most highly trained sales force cannot attain a permanent success without skill in the manufacturing departments.

Efficiency is a vague, indefinite word. Any one can proclaim himself an efficiency engineer and perhaps succeed in fooling business men into the belief that he can be helpful to them, but no one questions that real individual efficiency is the result of a broad education and careful training. Our association does not believe in schooling the employee merely on the work which he is to do. We stand for a broad cultural education—for the complete development of the individual.

The association has three major objects—to develop the efficiency of the individual employee, to increase efficiency in industry, to have the courses in established educational institutions modified to meet more fully the needs of industry.

In perfecting plans for our work it is apparent that effort must be made to secure some additional legislation. According to figures given out by the Government Bureau of Education (Reports of 1912) only about four per cent of the adult male population of the United States have received high school education or its equivalent and but slightly in excess of two per cent have received any academic training. Our association is most interested in the ninety-six per cent who leave our educational institutions and go into industry with no better preparation than a common school education. At least one-half of the ninety-six per cent do not graduate from the common schools, many going to the fourth and fifth grades only, and a goodly proportion have practically no education at all. It is the purpose of our association to coöperate with the public schools and to duplicate their work only when absolutely necessary. Most of the training given in the corporation school is special or post-graduate work.

Our association carries on its activities under the direct supervision of an executive committee. Committees have been appointed on trade apprenticeship schools, special apprenticeship schools, accounting and office

For Critical Smokers

If you are as hard to please as I am, in this matter of cigars, I believe my private "J. R. W." Havana brand will delight you.

For many years I have had these cigars made to order, with my own monogram band. The leaf comes from a mountainous district in Cuba. It is especially selected for me by a man who resides there—a connoisseur in tobaccos.

And though I have smoked for 40 years, I have yet to find another Havana cigar of so mild and exquisite a flavor and aroma.

I Want Your Opinion

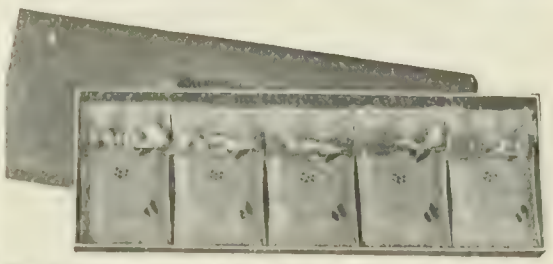
I believe there are legions of smokers who are seeking just such a cigar—something exceptional, a rare, sweet smoke—not too heavy and strong.

With such men I am glad to share my discovery. For I know how much it means to get the very cigar one craves. It may be that this dainty Havana is just what you have been seeking. Try it. I will send them by Parcel Post, $5 per hundred—$2.60 for 50—charges paid.

Write me early before I must limit the number I can supply.

Five Cigars Free

If you will send me 10 cents towards shipping expenses—I will mail you trial cigars. Smoke five with me—convince yourself. The price is $5 per hundred, $2.60 for 50—all charges prepaid.



Use your letterhead, please—stating your position—or your business card, and write now for these cigars.

J. ROGERS WARNER

924 Lockwood Bldg., Buffalo, N. Y. (40)

FRIENDSHIP ROSES

Five of them packed in a most dainty fashion to be given and worn as a token of friendship. It is the most charming gift imaginable. Must be seen to be fully appreciated; with dainty gift card. **$1.00 per box.** Satisfaction guaranteed. Our **Year Book of Thoughtful Gifts** will be sent upon request. It will solve the gift problems of the whole family.

What Clarkson Is Doing for the Book Buyer

IN several hundred thousand Libraries in the homes of people in every walk of life—from the day laborer to the college professor and high government official, from the persons who buy a few books of popular fiction to the persons who pride themselves on having the complete works of all the standard authors in De Luxe Editions artistically printed and bound **almost every book was bought from me. WHY?** Because, **I have no agents** and **sell you just the books you want—all new—many at a saving of from 50 to 90 per cent**—you examine the books in your own home for five days before paying for them. **If not satisfied, return them at my expense—and—owe me nothing.**

SAMPLE PRICES The Eyes of the World, 90c. Their Yesterdays, 35c. Winning of Barbara Worth, 35c. Calling of Dan Matthews, 35c. Shakespeare, 40 vol. full flexible Morocco, largest type and best notes of any Shakespeare published, publisher's price $96—my price $24. Library of Oratory, 15 vols. publisher's price, $15—my price, $4.75. Home Library, 8 vols. cloth, publisher's price, $4—my price, 85c. Messages and Papers of the Southern Confederacy, 8-4 Morocco, publisher's price, $15—my price, 98c. Wild Animals of North America, publisher's price, $3—my price, 45c. Popular Garden Flowers, publisher's price, $3—my price 65c. Girdling the Globe or Journeys Around the World, over 600 pages of ever-changing scenes of interest, publisher's price, $2.50—my price, 45c. Orations, Addresses and Club Essays, publisher's price, $1.50—my price, 42c.

Here are De Luxe Editions, Morocco bound, elegant paper, many of them at less than 25 cents on the dollar—Hugo's Complete Works, $9.40. Kipling, $7.80. Poe, $4.90—and all standard authors at similarly low prices.

Get My Big, New Catalog

My new catalog, sent free for the asking, tells you **how to save 50 to 90 per cent on thousands of books.** Is a course in literature, giving nationalities, date of birth and death of authors, the author's life and standing in literature, etc. Hundreds of sets and thousands of single volumes listed.

I sell more books direct to the booklover—the individual reader—the rich man who insists upon his dollar's worth—the man who watches his pennies—**and sell them for less money**—than any other man in America. Every book new and fresh, and **guaranteed** to please you—you to be the judge. I do not quibble, and would rather have a book or set of books returned at my expense than to have a dissatisfied customer.

David B. Clarkson, *The Book Broker*

1120 Clarkson Building Chicago, Illinois

work schools, and advertising, selling and distribution schools.

Considerable data has already been collected along the lines of the work of these committees and is available to industry thru published volumes of proceedings of the first and second annual conventions of our association. During the coming year these committees will prepare syllabi, general in character, which may be taken as the basis for courses by corporations desiring to undertake educational work for their employees.

Our committee on safety, hygiene and coöperation will prepare bibliography of data on the subjects which it is considering. This committee will give special consideration to safety work and methods of incorporating this work in the regular instruction of the corporation school.

Our committee on public education will, first, conduct an investigation to ascertain to what extent industries are at present coöperating with public schools. Second, make a compilation of the experiences of industrial corporations which have coöperated with the public schools. Third, consider in what additional ways the public schools and industries can coöperate to advantage. Fourth, give special attention to the collecting of data as to those general educational courses in which the experience of industry has shown the public schools to be particularly weak with reference to fitting persons to enter industrial life. Fifth, ascertain to what extent industries find it necessary to duplicate the educational work of the public schools and make investigations in several localities to ascertain whether the public schools are willing to conduct the needed courses.

This committee will also conduct research work to ascertain the methods of so-called "business colleges," "commercial institutions" and similar organizations giving courses in shorthand, typewriting, bookkeeping, etc.

Our association will undertake other activities, but the above outline will suffice to show what is considered of greatest importance at the moment and in what lines we are directing our attention.

New York City

Mistress—Why have you put two hot water bottles in my bed, Bridget?

Bridget—Sure, mum, wan of thim was leaking, and I didn't know which, so I put both in to make sure.—*Punch.*

Band leaders have a notion that the people want to hear the "William Tell" overture frequently. I think band leaders are as badly mistaken in this as editors are in the notion that the people demand something about Jane Addams at least once a week.—*E. W. Howe's Monthly.*

BLAU, ZALKIN & COHEN, Attorneys for Receiver, 141 Broadway, New York.

WOMEN WHO PROGRESS

An innovation in Illinois is a jury of women physicians who recently served in the court for the insane at the detention hospital in Chicago.

A brilliant lawyer, Mrs. Annette Abbott Adams, has been appointed Assistant United States Attorney of San Francisco and is the first woman to hold such a position in the United States.

In joining the ranks of railroad employees, Miss Daisy Ogden, of Davenport, who is said to be the only passenger agent in the world, has opened up a new field for women for which she has great hopes.

The Women's Tax Resistance League of London is to suspend hostilities during the war. "No Vote, No Tax" has been a costly motto, as members of the league have sometimes sacrificed property rather than pay taxes.

Six motor ambulances to be used at the front have been presented to the British Medical Corps from the American Women's War Relief Fund. The original plan for an ambulance ship has for the time being been dropt.

Another progressive step in prison reform is the plan to introduce domestic science classes, sewing, cooking and general housework into the Illinois Women's State Prison, the work to be in charge of the matron, Miss Grace Fuller.

Miss Chadsey, formerly tenement-house inspector of Cleveland, became so necessary to the city after her organization of sanitary squads that a special office, that of head of the bureau of sanitation, was created for her. The sanitary police have the same powers that the ordinary policeman enjoys; their unique work is to keep Cleveland clean.

Instead of opening a Red Cross branch, the Suffrage Association of Hungary has bent its energies toward establishing an employment bureau for women left without means of support at the call to arms. The city government of Budapest gave the bureau its first order, which called for 500 street sweepers.

Los Angeles clubwomen have filled a vital need in establishing a psychopathic parole society for the aid of women who come into the courts as insane. The study of the prevention of insanity, the cure of those temporarily affected, and the finding of homes for those fit to be discharged on parole from hospitals for the insane are but a few of the tremendously important things on which these clubwomen are working.

Women's votes have been money in the pockets of Chicago, for since the ballot was given them the city has solved the problem of garbage disposal and wrung from it a monthly profit of $2000 to boot. A new plant has been installed with great dryers to which the garbage is brought in iron boxes, which do away with the old evils of exposure; and aside from the increased health and comfort there is a saving of about $6000 a month.

THE NEW BOOKS

BUSINESS ETHICS

THE long look of an evolutionist, the practical sense of a successful business man and the broad sympathies of a humanitarian idealist are revealed in the author by the lectures gathered under the title *Trade Morals: Their Origin, Growth and Province*. In true Spencerian fashion, tho in a very readable way, Mr. Edward D. Page traces the evolution of human conduct from our remote ancestors to the highly complex mixture of customs and principles found in this country today. It is the conflict of class customs with the needs or standards of the larger group, as well as the various social groups which gives rise to the various problems of business ethics. Of class customs not thus in harmony with the welfare of the largest group, Mr. Page finds many examples in the doings of trade unions; by implication also in the customs of employing groups.

The development of "quick trading" on narrow margins of profit, brought about by the improvements in transportation and communication, is gradually eliminating those business men who depended for their success upon the ignorance of the buyer, upon deceit, etc. More and more must business adopt the highest ethical principles prevailing in society. Mr. Page lays down five principles as the basis of these new trade morals. The business man must deal with those of a lower moral development upon his own plane and make no concessions; he must subordinate immediate gain to prevailing folk customs and humanitarian considerations; the interests of his class to the interests of society as a whole, while in the conflict of classes adjustment must be made by mutual concessions in harmony with social welfare; and finally, in cases of conflict between statutory regulations and prevailing customs, the former must give way while men protest the unsuitable statute, but in the conflict of public law with custom it is the law that must be upheld. Mr. Page does not claim that all business is conducted on these principles, but he contends only that the best business, and in the long run all successful business, is of necessity conducted in a manner that meets the needs of society.

The Darwinian concept of the "survival of the fittest" is taken as an ultimate truth by Mr. Page, tho at the same time he seems to have a curious contempt for what he calls "Progress," apparently confusing it with advance toward greater size merely. He also assures us that "business in actual practise is not conducted with a sole eye to gain, but in general with due regard to social, that is to say, moral, consequences." We wish we were as sure of this "due regard for moral consequences" as the author is. He sees in socialism a plan to eliminate competition from life; an error that follows the assumption that economic competition is eternally fundamental. Eminently well worth reading, for the business man no less than the student of sociology or of ethics, while in it the reformer will find encouragement.

Trade Morals, by Edward D. Page. New Haven: The Yale Press. $1.50

SCIENTIFIC SELLING

The catchwords of these times are efficiency and psychology; every manager of men or corporation aims at efficiency, and psychology has been applied to a hundred branches of production. Now there is the science of selling. To the layman the human equation in making a sale seems the important consideration, but Paul H. Neystrom in his book on *Retail Selling and Store Management* points the way toward scientific selling. For the man who is interested in the problems of retail selling, this book is pregnant with helpful suggestions.

Half the pages are devoted to the salesman. It reveals in a simple, direct fashion the psychology of selling and gives invaluable hints to the man-on-the-road whose chief business is to convince the buyer that he wants the goods the salesman has to offer. The other part of the book helps solve many of the perplexing problems of retail managers which are usually mastered alone by efficiency engineers. With the aid of numerous plates which help to make clear the mooted questions, even the casual reader gets a clear view of the scope and possibilities of scientific management. Despite the technical problems treated, the interest does not lag.

William Maxwell in *Salesmanship* gives the reactions of a traveling salesman to the selling business. At times Mr. Maxwell has some hard things to say about salesmen, but it is always the loving correction of a man who loves his profession. There is little talk of science in this book, but the personality of the author is felt on every page. It is the well-written conclusions of a man who has faced the problems he writes about and for the young salesman is delightful and profitable reading.

Successful Selling, by E. Leichter, is shorter than either of the other books and in style is half way between them. It is written in a common-sense manner and is a keen analysis of the selling art.

Retail Selling and Store Management, by Paul H. Neystrom, Ph.D. New York: D. Appleton & Co. $1.50.
Salesmanship, by William Maxwell. Boston: Houghton Mifflin Co. $1.
Successful Selling, by E. Leichter. New York: Funk & Wagnalls Co. 50 cents.

BOOKS OF THE WEEK

Mothers and Children, by Dorothy Canfield Fisher. Applying the Montessori method to the conduct of the home. A sympathetic search for new ways of rearing the child when the old creed and old authority has broken down.

Holt. $1.25.

Putnam. $2.50

In Defense of What Might Be, by Edmond Holmes. An arraignment of "What Is" and pregnant with glowing possibilities for the untrammeled soul of the growing child. A draft of fresh air into static pedagogy.

Dutton. $1.50

HOUSEHOLD EFFICIENCY

If, in these days of financial stringency, any man dares to contemplate building, he will be encouraged by *The Book of Little Houses*, with its plans and descriptions of attractive homes that have been built for $1500 to $10,000. The illustrations are delightful, tho an economical combination misplaces some of them in a most confusing way, and the concise list of do's and don'ts, together with the sleeping porch suggestions, are important for the practical homebuilder.

To be truly up-to-date the new house must be electrically run, and Maud Lancaster in *Electrical Cooking, Heating and Cleaning* leads one thru the mazes of practical electricity for the household, giving an invaluable catalog of usable devices and the probable cost of operation, tho her data were collected in England where the expense of electricity is slight.

The bane of modernity to some homemakers is the inevitable family budget. Thirmuthis A. Brookman condenses much useful information into his little book, *Family Expense Account*, not only on the proportionate expenditure of income, but on its investment, in following the financial history of a Californian family from 1901-1914, with a series of tabulated yearly accounts.

"The increased cost of living makes especially desirable a study of food values and the cost of food" says the preface to *A Study of Foods*, by Ruth A. Wardall and Edna Noble White. The principles involved in the preparation of food are presented in a concise, simple manner. The book is intended primarily for a text-book, with practical laboratory exercizes, but contains material quite available for those outside the classroom.

The Book of Little Houses. Macmillan Co. 50 cents.

HOW TO SUCCEED

In *Concentration, the Secret of Success*, Julia Seton Sears sets forth a formula for acquiring success which is

summed up in three words—Breath, Concentration and Silence. The basis of the formula is "correct breathing." After mastering "the breath" the student drops the physical exercize, taking simply the thought, projecting the image of the thing desired and passing directly into "the silence." When you can hear your own heart beat, you are awake in the supraconsciousness of your own mind. Then you are ready to create. As a clue toward the begnning of self realization the book will be most useful.

Clode. 50 cents.

SOUTH SEA ISLANDS

The latest volume in the big crop of Stevenson aftermath is *The Cruise of the Janet Nichol* from the diary of Mrs. Robert Louis Stevenson. Written without pretense of literary art, this picture of life in the tropical islands is far from attractive. The disease, filth, vice and degradation here casually revealed is very different from the roseate view we get from the pages of Melville, Pierre Loti or Stoddard. The photographs taken by the party reinforce this realistic impression. The present war adds to the interest of certain pages; the glimpse of Upolu, Stevenson's home, recently captured by the New Zealand expedition, and the visit, in impromptu full dress, to the German Commissioner's residence, on Jaluit, now taken by the Japanese.

Scribner. $1.75.

ONLY A GHOST AT BEST

In *Anne Faversham*, the latest of the paradoxical novels of J. C. Snaith, the author has tried to recreate no less a superman than William Shakespeare. Above the lines constantly hovers the wraith of the poet with a seeming, 'Did I so? Was I thus?" upon his immortal lips. For Mr. Snaith's Shakespeare is flaccid. The author tells us what his hero is, but to show us he utterly fails. Masefield, by bare possibility, might give us a Shakespeare out of the plays and render him real as he is in and behind them, but that is a task that Mr. Snaith is scarcely equal to. The plot is excellent, the expression meager.

Appleton. $1.35.

KIPLING FOR THE UNINITIATED

Kipling now has reached the Browning stage and all his allusions must be interpreted, which is the reason for *A Handbook to the Poetry of Rudyard Kipling*, by Ralph Durand. If anybody is disposed to be skeptical of the usefulness of such a commentary ask him to point out the three punning personalities in the line "The bezant is hard, ay, and black," or to explain the meaning of "the tilted wain," "the facts of Khatmandhu," "from Kaf to Kaf," "Her that fell at Simon's Town" and "chronic [illegible]."

Doubleday, Page. $2

DOSTOYEVSKY IN ENGLISH

For the first time, in this series of translations the English reader is enabled to become acquainted with the complete works of Fyodor Dostoyevsky, one of the greatest masters of Russian literature. *Crime and Punishment* is more familiar to us than the others; as

THE FATUITY OF LOVE

A farcical story of a young Englishman who, after an erroneous diagnosis, is told that he has but six months to live, as per Locke's *Simon the Jester*, is *The Gay and Festive Claverhouse*, by Anne Warner. There follows a series of escapades on the part of the young man, who tries to disillusionize a girl who persists in remaining madly in love with him.

Little, Brown. $1.

UNDER THE BLACK FLAG

A fascinating historical sketch of piracy from the days of Greek and Roman triremes and galleys to modern steamers in China and Malaysia is *The Romance of Piracy*, by E. K. Chatterton. A chapter each is devoted to such old favorites as Morgan, Blackbeard and Kidd, and the style thruout is thoroly interesting. The book of course makes its special appeal to younger readers.

J. B. Lippincott. $1.50.

THE DAYS OF COLUMBUS

Dr. James J. Walsh, with whose writings the readers of The Independent are more familiar than they know has written a eulogy of *The Century of Columbus* as he formerly did of *The Thirteenth Greatest of Centuries.* It is a one-sided picture, of course, but all the more valuable on that account since it presents a side that is commonly overlooked, the scientific, artistic, political, literary and social achievements of the age. For instance, the chapters on feminine education and accomplishments will be enlightening to many readers.

Catholic Press, New York. $3.50.

SIKHS AND SIKHISM

The Sikhs (the word might be spelled Seeks) have not yet been reported prominently on the battle line in France, but from their history and somewhat fatalistic beliefs it is to be expected that they will serve England well. The reason of their loyalty to Great Britain together with extracts from their sacred books is clearly set forth in *The Religion of the Sikhs* by Dorothy Field. This volume is one of the Wisdom of the East Series, a series whose purpose it is to bring Eastern and Western thought nearer together by proving that after all they are not so far asunder.

Dutton. 70 cents.

OUR ENEMIES, THE GERMS

Few works are more thoro and authoritative than *Infection and Resistance*, by Hans Zinnser, who is Professor of Bacteriology at the College of Physicians and Surgeons of Columbia. Tho intended primarily for medical students the lay reader who is not scared by strange words will be able to get from it an understanding of the remarkable discoveries in this new field of medical science. The Ehrlich theory

PREHISTORIC WOMAN SUFFRAGE

Woman was once the dominant partner in the family is the debated thesis which Mrs. Gallichan, under the pen name of J. C. Gasquoine Hartley, attempts to prove in *The Age of Mother-Power*. She introduces a novel theory of the rise of "mother-power," which interprets accepted facts from the viewpoint of the modern woman as well as the scientific student. The book has been published in England as *The Position of Woman in Primitive Society*.

Dodd, Mead. $1.50.

GUIDES TO THE FICTION STOREHOUSE

In this day of specialization and classification it was inevitable that some one should index for us the long and familiar list of Dickens' characters and tell us just where each is to be met. This guide to the picture gallery J. W. McSpadden has incorporated in his *Synopses of Dickens's Novels*, while performing similar services for the student of lovers of Scott and Shakespeare in the *Waverley Synopses* and *Shakespearian Synopses*.

Crowell. 75 cents each.

WHAT DIPLOMATS ARE FOR

The Sunny Side of Diplomatic Life, by Lide Hegermann-Lindencrone, concern chiefly the varied recollections from 1875 to 1912, during which time the writer's husband was the Danish Minister to Washington, Rome, Stockholm, Paris and Berlin. They abound in anecdotes of famous folk and charmingly describe the less known courts of Copenhagen and Stockholm. The Berlin chapter with its amiable picture of the German court and the Kaiser will have especial interest now.

Harpers. $2.

AN EX-AMBASSADOR SPEAKS

Of the seven essays by our former Ambassador to Russia and to Germany published under the title, *Essays, Political and Historical*, by Charlemagne Tower, LL.D., those concerned with the treaty obligations of the United States in relation to the Panama Canal and with America's position in the settlement of international disputes by arbitration are perhaps the best and certainly the most timely.

Lippincott. $1.50.

A STATELY, SPACIOUS SUMMER HOME
ON LONG ISLAND SOUND

At the mouth of the Connecticut river, and half a mile from where Yale college was founded, may be bought at a bargain. It is in an exclusive colony of delightful people, with a yacht club close by, tennis and golf links almost on its own grounds, with perfect automobile roads from the door to Providence, Boston, Hartford, New Haven and New York.

The house was built for hospitality and substantial comfort. A pillared portico with a hundred and fifty feet of piazza. Twelve fireplaces—one of them with a six foot opening. Steam heat. Sixteen bedrooms. Four tiled bathrooms and two others. The owner will answer questions and show pictures if desired. Electric light plant, garage, and chauffeur's cottage. For a family with young people there never was a better opportunity to secure at a very moderate price a perfect summer home by the seaside. The house would be sold with furniture if desired. Atlantic Mutual Insurance Co.

Atlantic Building, 51 Wall St., New York

Insures Against Marine and Inland Transportation Risk and Will Issue Policies Making Loss Payable in Europe and Oriental Countries

Chartered by the State of New York in 1842, was preceded by a stock company of a similar name. The latter company was liquidated and part of its capital, to the extent of $100,000, was used, with consent of the stockholders, by the Atlantic Mutual Insurance Company and repaid with a bonus and interest at the expiration of two years.

During its existence the company has insured property to the value of	$27,219,045,826 00
Received premiums thereon to the extent of	282,298,429 80
Paid losses during that period	141,567,550.30
Issued certificates of profits to dealers	89,740,400.00
Of which there have been redeemed	82,497,340.00
Leaving outstanding at present time	7,243,060.00
Interest paid on certificates amounts to	22,585,640.25
On December 31, 1913, the assets of the company amounted to	13,259,024.16

The profits of the company revert to the insured and are divided annually upon the premiums terminated during the year, thereby reducing the cost of insurance.

For such dividends, certificates are issued subject to dividends of interest until ordered to be redeemed, in accordance with the charter.

THE MARKET PLACE

THE STOCK EXCHANGE AND THE WAR

BY WILLIAM C. VAN ANTWERP

GOVERNOR OF THE NEW YORK STOCK EXCHANGE, AUTHOR OF "THE STOCK EXCHANGE FROM WITHIN"

One of the very first things that happened when the war burst was the paralysis of the world's Stock Exchanges. The Bourses at Toronto and Madrid closed July 28; those at Vienna, Budapest, Brussels, Antwerp, Berlin and Rome on July 29; St. Petersburg, Montreal and all South American centers July 30. The Paris Bourse, gorged with huge masses of unsalable Balkan loans and Russian industrials in addition to their own new Government loan, was so deluged by sales that a market no longer existed. Accordingly the Coulisse and later the Bourse itself was closed, thus throwing all the world's sales of securities on the Exchanges of London and New York. For the first time in its history the London Exchange, unable to withstand such a torrent of liquidation, closed its doors at 9 a. m., July 31, after the announcement of several failures. The Stock Exchange in New York alone remained open.

When the Governors of our great Exchange gathered together on that eventful morning they were burdened with responsibilities of the utmost gravity. While aware that it would be a splendid achievement to continue business alone among the great security markets of the world, they realized none the less that the over-night accumulation of selling orders from every quarter of the world would impose upon brokers, investors, speculators and bankers a strain that could not be borne. Everybody wanted to sell in New York because there was no other place to sell. Over-night orders revealed a frantic state of mind, and this was especially true of cables. There was no price limit. "Sell at the market," was the word, and utter demoralization the prospect. Europe alone owns $6,000,000,000 of our securities. Even if one-fifth or one-tenth of these holdings were unloaded on New York with such suddenness, we could not have absorbed them, nor could we have found a way to pay for them in the circumstances that then prevailed. Literally standing to be shot at, with the certainty of a panic unparalleled in its consequences to American business and industry, the Governors decided, at fifteen minutes before ten, to close the Exchange. Their action calls for nothing but praise; its importance to the whole community is beyond discussion.

The Stock Exchange is not a fair-weather institution. It has survived many panics and it has grown in strength thru all our American vicissitudes. Its Governors decided to close, not to protect its members, but to protect the American public from a frightful assault on collateral values and a destructive drain on all forms of credit. No group of business men in America suffered more from this action than the members of the Exchange; their business came to an end while their expenses, always heavy, continued, all this following a long period of dulness and diminished profits in the security markets. Yet they did their duty as good citizens, regardless of the sacrifies involved.

Just as familiarity breeds contempt and indifference, so it sometimes happens that facilities and conveniences with which we are most familiar in our great avenues of trade are not appreciated until they are interrupted or lost. Those who without study of the Stock Exchange have come to speak of it as a gambling arena cannot fail to have been imprest with the fact that something more than a gambling place disappeared when its doors were closed. What actually disappeared was the standard American index of trade and credit; what was closed was a great market place whose primary function had been the distribution of American securities, which make possible American enterprise. We found it inconvenient, to be sure, to have our securities poured back upon us by foreigners, but that fact must not obscure the greater consideration that it was thru these same Stock Exchange facilities that foreign capital was enabled to invest in those securities.

Persons who had never before understood the primary importance of the Stock Exchange were quick to realize that a frozen credit market had resulted from its closing. Banks, courts, and legislatures had long accustomed themselves to a free and unrestricted market for securities as the one test of values. When the Stock Exchange closed its doors there was no longer a guide upon which to base values that had heretofore appeared in loans secured by collateral, and this introduced into our perplexities another difficulty. Here again the action of the Wall Street banks calls for the highest praise. With the market closed for an indefinite period these banks were forced to carry an immense burden of loans on Stock Exchange collateral ordinarily fluid beyond all other forms of collateral, but now frozen solid. All their secondary reserves became, as it were, unmarketable investments, and "intrinsic values" —whatever that may mean—came by force of circumstances to take the place of market values. It was a state of affairs quite beyond precedent, but the banks faced it as they faced all their other difficulties. So far as I am aware,

not a single loan was prest for payment, and where collateral seemed to demand reinforcement, the request was couched in terms of suggestion, quite without peremptory demand, while rates of interest charged on these loans were gradually reduced.

Meantime, with the same courage and promptness which led to the closing of the Exchange, its members have so strengthened their bank loans and so reduced them that no difficulty, I fancy, need be apprehended on that score. They have voluntarily accomplished the liquidation of more than $100,000,000 of unfilled contracts without adding to their borrowings at the banks, and they have cleared the situation of one of its greatest dangers by maintaining, as the official minimum, the level of prices recorded on their last day of business. They have kept in close working contact at all times with the banks, the authorities at Washington, and the Stock Exchange in London—all this with a view to aiding the restoration of confidence and credit. Thru the various committees organized for the purpose more than $100,000,000 bonds have changed hands, and more than 250,000 shares of stock. Indeed it might be said that the Exchange has not actually closed its doors at any time. At least it has provided a means for necessitous selling to some extent, and for investment purchases at a fixed level of prices.

Because of the progress that has been made, a natural demand has arisen that the Exchange reopen. Now in so far as the Stock Exchange and its members are concerned, there is no reason why business should not be resumed. They have cleared up their balances and strengthened their loans to an extent which has put them in readiness. But the same reason that led them to close has thus far impelled them to remain closed, namely, the greatest good for the greatest number.

The purpose of the Stock Exchange is to facilitate the exchange of securities and thereby assist in the creation of new enterprises. At present there are no new enterprises, and there can be none until credit facilities are restored. To reopen the Stock Exchange until tolerably normal conditions prevail in the credit market would force necessitous selling upon investors. This would result in abnormal prices which are uneconomic, unethical and unjust as a basis of settlement. It was to prevent the enforcement of contracts upon such a basis that moratoria were established thruout the world. The New York Stock Exchange is a part, but only a part, of the financial machine. One part of a machine cannot maintain its functions when all other parts are stilled. Any such attempt would mean that large numbers of innocent investors, wholly unrelated to the war, would suffer hardships. What has been of vastly greater importance in these opening months of the war has been the resumption of an international exchange not of securities, but of *commodities* which are needed to maintain human life. This also is a matter of credit, and until such ample credit facilities are

The Combined Knowledge of 45 National Periodicals Is at Your Service.

The Quoin Club, August 26, 1914.
Fifth Avenue Building,
New York City.

Gentlemen:

Thank you for your courteous letter of August 24th, answering our inquiry regarding the number of stucco houses.

You may be sure that we sincerely appreciate the completeness of your report and the promptness with which you gathered this data. This is real constructive service which I am sure will prove mutually profitable.

We may have occasion to solicit your co-operation in connection with another product in the near future.

With the assurance that we are very grateful for your courtesy and with the hope that we may find it of advantage to work more closely along these lines in the future, we are Yours very truly,

(Signed by a large national advertising agency.)

Business Executives with marketing problems find this service of great importance, it includes market analyses, national sales facts, etc., etc.

It may mean comfort for life—it may a great deal more. Write for it now.

W. A. SHRYER, Pres., AMERICAN COLLECTION SERVICE, 625 State Street, Detroit, Mich.

control as will insure a free market for foodstuffs and supplies, the Stock Exchange should not, by a resumption of its activities, hamper or restrict that movement. These are reasons why the Stock Exchange has not reopened.

Another reason lies in the fact that Europe is a large holder of American securities, and to reopen our Stock Exchange prematurely, when all the others are closed, would merely invite a resumption of that concentrated pressure on New York which we brought to an end by closing our doors. Sir George Paish has stated recently that he does not believe London will be a heavy seller of our securities. In making that statement he wished, no doubt, to reassure us, and I hope he has stated the case correctly. France will certainly sell heavily. In any case Europe will not be paid for those securities in gold, and measures looking to other forms of payment are now under way. It must be borne in mind that where payments are due abroad, we must pay them promptly, but where payment is due on this side, as in the case of securities sold here by foreigners, the creditor receives his money here, and the question of when and how to convert it into foreign funds, becomes, in a crisis like this, a matter of arrangement between the parties in interest.

Meantime improvement continues in many directions. There are record-breaking exports of foodstuffs and of various supplies of manufactured articles; cotton is slowly beginning to find a market, money is accumulating and the resources of the banks will be greatly augmented by the operation of the new Bank Act. There is a marked reduction in loans and a reviving demand for old and seasoned investments. In the long run imports and exports will bring about offsets, and trade will go on as before. The British moratorium has already ended; that of France has been modified, and the moratoria of other countries are expiring each week. Affairs in this country are moving in an orderly way toward recovery. The banks in the central cities have restored their legal reserves, and fears of a financial crisis have disappeared. But one serious difficulty remains, having a vital bearing on the entire investment situation. I refer to the plight of the railways, which to a large extent affects the banks, the Stock Exchange, and the entire credit position.

Briefly the returns on railway capital employed in America today is 3.99 per cent. Yet renewals of notes of roads enjoying the high credit of the New York Central and the Lake Shore today costs 7 per cent.

Net earnings of all railroads in the fiscal year 1914, after all deductions, showed a total loss over 1913 of more than $124,000,000.

American railway bonds are now in default in the volume of $578,000,000, while the funded debt, notes and bills payable during the calendar year 1915 by all companies amount to the staggering total of $817,465,970.

Where is this money to come from with railway credit at its present low ebb? It will not suffice to say that the situation is one of difficulty; it is one of the utmost gravity.

The following dividends are announced:

Federal Mining & Smelting Company, preferred, 1 per cent, payable December 15.

National Sugar Refining Company, 1½ per cent, payable January 2, 1915.

NEW RED CROSS MEMBERS

Each Contribution of Two Dollars or more constitutes the giver a Member of the American Red Cross for the current year, with a free copy of the October issue of the *Red Cross Magazine*. The Independent will send—by authority—to each contributor a Certificate of Membership and a Red Cross Button.

The total amount contributed to the Red Cross Relief Fund thus far thru The Independent is $4,419.72.

The following list covers the contributions of the past week:

Miss Alice D. Agnew, Sewickley, Pa., $2; Miss M. E. Ailinger, Endeavor, Pa., $2; C. E. Artman, London, Ohio, $2; Mrs. Guy Bassett, Endeavor, Pa., $2; Roland R. Bedell, Le Mars, Iowa, $2; E. H. Visitor (at séance)—I want to talk with Mr. Brown.

Attendant—What Mr. Brown?

Visitor—I cannot remember his first name, but he is only lately deceased.

Attendant (formerly a department store worker)—Please show the gentleman some of the latest shades of Browns.—*Harper's Weekly.*

He had waited thirty minutes for a slow waiter to bring his dinner.

"Now," he said to the waiter, "can you bring me some cheese and coffee?"

"Yes, sir; in a minute, sir."

"And," continued the diner, "while you are away you might send me a postal card every now and then."—*Woman's Home Companion.*

In a hospital at Cape Town during the South African war, the keenness of certain amateur members of the nursing staff tended to aggravate, rather than alleviate, the sufferings of some of the wounded.

At last the British soldier's native wit came to the rescue. One morning a sick soldier's bed-clothes displayed a slip of paper inscribed:

"Too ill to be nursed today!"—*Tit-Bits.*

While hauling apples last week, Will Shelly lost his coat off the wagon, and inserted the following in the daily paper: "The party who picked up a brown coat on the Leavenworth road, is known, and unless the coat is returned, an arrest will follow." The following day, Mr. Shelly received this letter: "Dear Mr. Shelly: Since you know who has your coat, come and get it."—*E. W. Howe's Monthly.*

When Germany Wins

WE have heard a great deal about what England and France are fighting for. We have heard very little—except from English sources—about what Germany is fighting for. Here is a chance to read the other side from a competent and authoritative representative of the German people.

Bernard Dernburg, former German Secretary of State for the Colonies, will tell in next week's INDEPENDENT what Germany wants and what she will do if she wins.

Dr. Dernburg stands for what Americans most admire in modern Germany; its industries, its commerce, its technical schools and its efficient organization. When the Kaiser put him at the head of the Colonial Office in 1907, it was a great shock to the Junkers, who thought that such high positions were the natural monopoly of those of noble lineage and resented the intrusion into the cabinet of a business man, and, what was worse, a business man of American training.

But the Kaiser was tired of the bureaucratic and military methods of administration in the Colonies and wanted to have them developed and made self-supporting instead of remaining a drain on the imperial treasury. Herr Dernburg made a personal inspection of the African possessions and would probably have made them in time as profitable as the British colonies if he had been able to carry out this program of reforms.

Herr Dernburg is the son of an editor of the Berlin *Tageblatt* and was born in Darmstadt fifty years ago. After graduating from the Berlin gymnasium he went to New York City in order to learn American ways and was for some years in the banking house of Ladenburg, Thalmann & Company. After his return to Germany he became a director of the Bank of Darmstadt. He is now in this country as a representative of the German Red Cross.

As a man thoroly familiar with American history and politics, as well as finance, he understands our point of view and can interpret to us the point of view of his own country.

THE INDEPENDENT—NEXT WEEK

Loose leaf books and binding devices are made by competent craftsmen in our thoroughly equipped plant. Our experience of seventy years in building special commercial forms and books enables us to furnish goods with the highest possible efficiency.

Tell us your wants and send us your rough sketches; we will weld them into handsome, workable, hand-ruled proofs and furnish estimate.

INSURANCE

CONDUCTED BY W. E. UNDERWOOD

This department of The Independent will undertake to furnish on the request of readers any information respecting the business of insurance and the companies transacting it which we have or can procure. We cannot, however, pass upon the debatable comparative differences between companies that conform to the requisite legal standards set up for all, except in so far as the claims made by any of them seem to be inconsistent with the principles of sound underwriting. Address all communications on insurance subjects to the editor of the Insurance Department.

"ACCIDENTS WILL HAPPEN"

Occasionally some of the companies writing accident insurance print a short account of a few of the misfortunes encountered by their policyholders and for which claims are made. We have before us such a list issued by the Travelers Insurance Company of Hartford. Many of the casualties met with by the wayfaring man are of a character so unusual or are due to circumstances so much out of the ordinary as to be difficult for the imagination of any of our most fertile fiction writers. Here is one—the experience of a machinist's helper: He was on his way to work at half-past eleven o'clock at night and while passing a saloon which had been robbed he was run into by the fleeing robber who carried an open knife in one of his hands. In his efforts to break his fall and disengage himself the robber cut the helper in the leg.

A crockery merchant while filling the gasoline tank of his automobile truck was severely burnt by the ignition of the fumes from the acetylene lamps of the car. A landscape artist was sitting on his piazza with a friend when lightning struck the house, killing the friend instantly and seriously injuring him. A man in Philadelphia while trying to save the life of a kitten which had been attacked by a dog was bitten by the kitten, receiving painful and disabling injuries to one hand.

As a matter of fact, it is the unexpected which happens in accidents as in other things that make the maintenance of a policy against those hazards desirable.

METROPOLITAN LIFE

At a recent meeting of the directors of the Metropolitan Life Insurance Company of New York it was unanimously voted to submit to the stockholders and policyholders of that company a plan for the retirement of the capital stock and the subsequent transformation of the institution into a mutual organization. The proposition will be submitted to the stockholders for their action at a meeting called for December 4, and to the policyholders on December 28.

The capital stock of the Metropolitan aggregates $2,000,000, divided into 80,000 shares of a par value of $25 a share. The plan proposed provides for the transfer of the stock at $75 a share, at which price it will cost $6,000,000, of which $4,000,000 will come out of the company's surplus, which is estimated by the management to have been on September 30 in excess of $40,000,000.

The holders of this stock are relinquishing a safe and profitable investment—a certain seven per cent income per year—and the price proposed for its sale is, under the circumstances, entirely reasonable. This is particularly true when we consider that of the fourteen and a half million policies in force, more than thirteen and a quarter million are non-participating, that is to say, have no contractual claim on a share of the surplus. The company has for many years past distributed bonuses among non-participating industrial policyholders, but this was done voluntarily. Another reason for regarding the sale-price of $75 a share as well within the bounds of fairness is the fact that the charter of the company provides that the surplus earnings on the industrial policies may be added to the company's capital, by way of increasing the policyholders' security.

All policyholders who are insured for at least $1000, and whose insurance has been in force at least one year prior to the time the vote is taken, are qualified to vote, either in person or by proxy, at the meeting to be held at the company's office on December 28. Two forms of proxies will be sent the policyholders, one for use in voting for and, the other, against the plan.

NOTES AND ANSWERS

Replying to one of the clergy at Chicago, who asks our opinion on a certain Western assessment association, we reply that life insurance on that plan always turns out to be fallacious, and that the cheapest system in the end is the old line legal reserve. Money spent on assessment life insurance is like ice left at the door to melt.

A. D. W., Dakota Agricultural College.—Nearly all this work is carried on by boards or associations. Communicate with W. E. Mallalieu, general manager, National Board of Fire Underwriters, 135 William street, New York City, or Franklin H. Wentworth, secretary, National Fire Protection Association, 87 Milk street, Boston, Massachusetts. Either or both will doubtless be pleased to put you in the way of getting what you want.

A. L. A., Atlanta, Ga.—The strictness of the laws and closeness of supervision render it difficult for any insurance company to operate long unless it is financially solvent. In a general way, we may say that all companies holding authority to do business from an insurance department are what they claim to be financially. But solvency is not the only essential. Past performances count for a great deal. A most valuable quality in an accident insurance company consists in the promptness and fairness which characterize its claim settlements.

THE MAGIC STORY

An extraordinary narrative about a document that brought happiness, ambition, wealth, fame or fortune to every man who read it.

I WAS sitting alone in the café, and had just reached for the sugar preparatory to putting it into my coffee. Outside, the weather was hideous. Snow and sleet came swirling down, and the wind howled frightfully. Every time the outer door opened, a draft of unwelcome air penetrated the uttermost corners of the room. Still I was comfortable. The snow and sleet and wind conveyed nothing to me except an abstract thinksgiving that I was where it could not affect me. While I dreamed and sipped my coffee, the door opened and closed, and admitted—Sturtevant.

Sturtevant was an undeniable failure, but, withal, an artist of more than ordinary talent. He had, however, fallen into the rut traveled by ne'er-do-wells, and was out at the elbows as well as insolvent.

As I raised my eyes to Sturtevant's, I was conscious of mild surprise at the change in his appearance. Yet he was not dressed differently. He wore the same threadbare coat in which he always appeared, and the old brown hat was the same. And yet there was something new and strange in his appearance. As he swished his hat around to relieve it of the burden of snow deposited by the howling nor'wester, there was something new in the gesticulation. I could not remember when I had invited Sturtevant to dine with me, but involuntarily I beckoned to him. He nodded, and presently seated himself opposite to me. I asked him what he would have, and he, after scanning the bill of fare carelessly, ordered from it leisurely, and invited me to join him in coffee for two. I watched him in stupid wonder, but, as I had invited the obligation, I was prepared to pay for it, although I knew I hadn't sufficient cash to settle the bill.

"Have you lost a rich uncle?" I asked.

"No," he replied calmly, "but I have found my 'mascot.'"

"Bridle bull, or terrier?" I inquired.

"Currier," said Sturtevant, at length, pausing with his coffee cup half way to his lips. "I see that I have surprised you. It is not strange, for I am a surprise to myself. I am a new man, a different man, and the alteration has taken place in the last few hours. You have seen me come into this place 'broke' many a time, when you have turned away, so that I would think you did not see me. I knew why you did that. It was not because you did not want to pay for a dinner, but because you did not have the money to do it. Is that your check? Let me have it. Thank you. I haven't any money with me tonight, but I—well, this is my treat."

"Do you know an artist who possesses more talent than I?" he asked, presently. "No. Do you happen to know anything in the line of my profession that I could not accomplish, if I applied myself to it? No. You have been a reporter on the dailies for how many? Seven or eight years. Do you remember when I ever had any credit until tonight? No. Was I refused now? You have seen for yourself. Tomorrow, my new career begins. Within a month I shall have a bank account. Why? Because I have discovered the secret of success."

"You" he continued when I did not reply, "not feature it quite. I have been reading a strange story, and since reading it, I feel that my fortune is assured. It will make your fortune, too. All you have to do is to read it. You have no idea what it will do for you. Nothing is impossible after you know that story. It makes everything as plain as A, B, C. The very instant you grasp its true meaning success is certain. This morning I was a hopeless piece of garbage in the metropolitan ash can; tonight I wouldn't change places with a millionaire."

"You amaze me," I said, wondering if he had been drinking absinthe. "Won't you tell me the story? I should like to hear it."

"Certainly. I mean to tell it to the whole world. It is really remarkable that it should have been written and should remain in print so long, with never a soul to appreciate it until now. This morning I was starving. I hadn't any credit, nor a place to get a meal. I was seriously meditating suicide. Then I found the story and read it. You can hardly imagine the transformation. Why, my dear boy, everything changed at once—and there you are."

"But what is the story, Sturtevant?"

The waiter interrupted us at that moment. He informed Sturtevant that he was wanted at the telephone, and, with a word of apology, the artist left the table. Five minutes later I saw him rush out into the sleet and wind and disappear.

* * *

One night, on the street, I encountered Avery, a former college chum, then a reporter on one of the evening papers. It was about a month after my memorable interview with Sturtevant, which, by that time, was almost forgotten.

"Hello, old chap," he said; "how's the world using you? Still on space?"

"Yes," I replied bitterly, "with prospects of being on the town, shortly. But you look as if things were coming your way. Tell me all about it."

"Things have been coming my way, for a fact, and it is all remarkable, when all is said. You know Sturtevant, don't you? It's all due to him. I was plumb down on my luck—thinking of the morgue and all that—looking for you, in fact, with the idea that you would lend me enough to pay my room rent, when I met Sturtevant. He told me a story, and really, old man, it is the most remarkable story you ever heard: it made a new man of me. Within twenty-four hours I was on my feet, and I've hardly known a care or a trouble since."

Avery's statement, uttered calmly, and with the air of one who had merely pronounced an axiom, recalled to my mind the conversation with Sturtevant in the café that stormy night, nearly a month before.

"Do you know the story?" I asked. "Will you try its effect on me?"

"Certainly; with the greatest pleasure in the world. I would like to have it printed in big black type, and printed on the elevated stations throughout New York. Excuse me a minute, will you? I see Danforth over there. Back in a minute, old chap."

He nodded and smiled—and was gone. I saw him join the man whom he had designated as Danforth. My attention was distracted for a moment, and, when I looked again, both had disappeared.

* * *

The certainty that the wonderful story—I began to regard it as magic—was in the air possessed me. As I started to walk homeward, fingering the solitary nickel in my pocket and contemplating the certainty of riding down town in the morning, I experienced the sensation of something stealthily pursuing me, as if Fate were treading along behind me yet never overtaking, and I was conscious that I was possessed with or by the story. When I reached Union Square I examined my address book for the home of Sturtevant. It was not recorded there. Then I remembered the cafe in University Place, and, although the hour was late, it occurred to me that he might be there.

He was! In a far corner of the room, surrounded by a group of acquaintances, I saw him. He discovered me at the same instant, and motioned me to join them at the table. There was no chance for the story, however. There were half a dozen around the table and I was the farthest removed from Sturtevant. But I kept my eyes upon him, and bided my time, determined that, when he rose to depart, I would go with him. A silence, suggestive of respectful awe, had fallen upon the party when I took my seat. Every one seemed to be thinking, and the attention of all was fixed upon Sturtevant. The cause was apparent. He had been telling the story. I had entered the café just too late to hear it. On my right, when I took my seat, was a doctor; on my left a lawyer. Facing me on the other side was a novelist with whom I had some acquaintance. The others were artists and newspaper men.

At length, I left my chair, and passing around the table, seized Sturtevant by one arm, and succeeded in drawing him away from the party.

"If you have any consideration for an old friend who is rapidly being driven mad by the existence of that confounded story, which Fate seems determined that I shall never hear, you will relate it to me now," I said, savagely.

Sturtevant stared at me in mild surprise. "All right," he said. "The others will excuse me for a few moments, I think. Sit down here, and you shall have it. I found it pasted in an old scrapbook I purchased in Ann Street, for 3 cents; and there isn't a thing about it by which one can get any idea in what publication it originally appeared, or who wrote it. When I discovered it, I began casually to read it, and in a moment I was interested. Before I left it, I had read it through many times, so that I could repeat it almost word for word. It affected me strangely—as if I had come in contact with some strong personality. There seems to be in the story a personal element that applies to every one who reads it. Well, after I had read it several times, I began to think it over. I couldn't stay in the house, so I seized my coat and hat and went out. I must have walked several miles, buoyantly, without realizing that I was the same man who, only a short time before, had been in the depths of despondency. That was the day I met you here—you remember?"

We were interrupted at that instant by a uniformed messenger, who handed Sturtevant a telegram. It was from his chief, and demanded his instant attendance at the office.

"Too bad!" said Sturtevant, rising and extending his hand. "Tell you what I'll do, old chap. I'm not likely to be gone any more than an hour or two. You take my key and wait for me in my room. In the escritoire near the window you will find an old scrap book, bound in rawhide."

I found the book, without difficulty. It was a quaint, home-made affair, covered with rawhide and bound in leather thongs. The pages formed an odd combination of yellow paper, vellum and home-made parchment. I found the story, curiously printed on the last named material.

* * *

The book which Currier found in Sturtevant's room contained an extraordinary narrative. The complete story, with the foregoing introduction, in a handsome book, will be supplied postpaid, bound in limp leather for Two Dollars, or in cloth for One Dollar. Descriptive booklet on request. Money refunded if desired.

[illegible] New York

A NUMBER OF THINGS

BY EDWIN E. SLOSSON

"NO," said my friend in concluding the discussion, "you cannot accuse me of inconsistency in my attitude toward the Great War. I know all of the peoples involved and I assure you my sympathies are wholly with the English as against the Germans, with the Germans as against the French, with the French as against the Austrians, with the Austrians as against the Servians, with the Servians as against the Hungarians, with the Hungarians as against the Turks, with the Turks as against the Japanese and with the Japanese as against the Senegalese. No well-informed man could logically take any other position."

By some curious perversity of human nature labor-saving devices are continually being turned into time-saving devices. One would naturally expect it to be just the other way. But take, for instance, the escalator which is now becoming common in railroad stations and department stores. This is intended to be simply the reverse of the ordinary stairway which remains stationary while human beings ascend and descend upon it. But instead of standing still on it as they are supposed to, people add their own motion to that of the stairway and rush down and even up with a doubled momentum. In nine cases out of ten there is absolutely no gain in time by this extra exertion, for one rarely makes an earlier train on the El. and the rushing crowds cause inconvenience and danger to those who use the escalator properly.

The escalator is intended for the leisurely, the lazy and the lame, the laden and the ladies, but those for whom it is designed are driven to use the ordinary stairway instead. So we often see a woman with children or a package-bearing commuter or a cripple toiling painfully up or down the fixed steps because on the moving they are jostled or run over by the human cataract. If what these hurrying people want is exercize let them walk in the opposite direction as long as they like, using the escalator as a treadmill.

It is hard to tell how the improper use of this modern convenience could be stopped. A sign, "Don't run on the escalator," would be no better obeyed than the present sign, "Don't smoke." Even a policeman would not have any effect unless he, too, walked up and down this inclined beat and thus violated the injunction he was set to maintain. Possibly here is a chance for direct action rather than legislation. I have been able to discourage the practise temporarily at the Manhattan subway station by standing in the middle of the step and holding on tight to the moving bannister on either side. This, however, was at the cost of considerable personal inconvenience. I don't mind being sworn at when I know I'm right and the swearer is wrong. But it makes my back lame to be punched in the ribs from behind. I have found, too, that setting my satchel in the middle of a step inflicts a natural penalty—in accordance with Spencerian system of just retribution—upon the improper use of the escalator, but the person tripped up and those who involuntarily follow his example do not recognize the fact that their pain is the result of their own violation of law of proper conduct. No, they blame it on me and even an ironic apology on my part does not suffice to make them realize their mistake. Perhaps something might be done thru coöperation where the individual is powerless. If those of us who believed in maintaining a stand-pat attitude on the moving stairway would put our arms around one another like sophomores about the flagpole at a class rush it might check the madding crowd. Of all these thousands grant but three to make a new Thermopylæ. United we stand, divided we fall.

Permit me to nominate by individual initiative the following candidates for positions now in great need of American administrative ability. I'm sure they would make better rulers than the grandchildren of King Christian of Denmark, degenerate scions of Bourbon or Hohenzollern stock or native talent:

For Shah of Persia
MORGAN SHUSTER

For Mpret of Albania
FRED WILLIAMS

For Sultan of Turkey
HENRY MORGENTHAU

For President of China
FRANK GOODNOW

For President of Mexico
FRED FUNSTON

For President of Santo Domingo and Haiti
BOOKER WASHINGTON

I have heard or read a good many addresses to students entering college; some of them eloquent, some sensible, some both, some neither. But I do not remember any of them better adapted to the purpose than the advice given by Professor Victor C. Vaughan to the students of the University of Michigan last Convocation and published in *Science* of November 13.

Toujours l'audace is the sort of a motto we might expect in such a daredevil as Danton, but it is a bit surprizing to find it echoed by two German chancellors who have never been regarded as given at all to rashness. Prince von Bülow tells in his volume on *Imperial Germany* that once, when he heard his predecessor, Prince Hohenlohe, commending a certain Bavarian statesman as capable and conscientious, he asked why he had not proposed him for a ministerial post. "He was not reckless enough for a minister," replied Prince Hohenlohe, very gravely. Then perceiving the astonishment caused by his reply, the Prince continued: "You must not understand my remark as an encouragement to reckless action in life, to which young people incline too readily. What I said was meant politically. A minister must have a good amount of resolution and energy in his character. He must sometimes risk a big stake and ride at a high hurdle, otherwise he will never be any good."

A Japanese lady, mother of two daughters and a son, was asked the number of her children. "I have had one son and two disappointments," she replied in the customary phraseology. When the Japanese get to Hawaii their daughters turn out suffragets and no wonder.

Provost Smith, of Pennsylvania, in his recent book on *Chemistry in America* quotes the following curious passage from *Letters for Literary Ladies:*

> Chemistry is a science particularly suited to women, suited to their talents and their situation; chemistry is not a science of parade, it affords occupation and infinite variety; it demands no bodily strength, it can be pursued in retirement; it applies immediately to useful and domestic purposes; and whilst the ingenuity of the most inventive mind may be exercised, there is no danger of inflaming the imagination; the judgment is improved, the mind is intent upon realities, the knowledge that is acquired is exact, and the pleasure of the pursuit is a sufficient reward for the labor.

It is true that more females are studying chemistry in the present century than in the eighteenth when this advice was given, but I doubt whether they have gone into that science for the reasons recommended, *i. e.*, that it is underpaid, does not inflame the imagination and can be pursued in retirement.

I sat in darkness the other evening listening to a lecture on "The Vandalism at Louvain," when Dirk Bouts' "Last Supper" was thrown on the screen as the greatest of the lost treasures, and I heard the unknown lady next to me mutter: "My! how ugly! Thank goodness, that one's gone." Evidently there are still iconoclasts among us, of the esthetic if no longer of the theologic type.

It was supposedly a biological student in pursuit of the required minimum of "culture studies" who applied at the librarian's desk of one of our leading universities for "Anthony and Coleoptera." He was perhaps thinking of the *Vedalia cardinalis*, commonly known as the lady bug.

The new fad for the reduction of the figure was like other reputed novelties known in antiquity. See Deut. xxxii, 15.

The *English Dialect Dictionary* contains 1300 names to call a fool. Still the supply is not equal to the demand

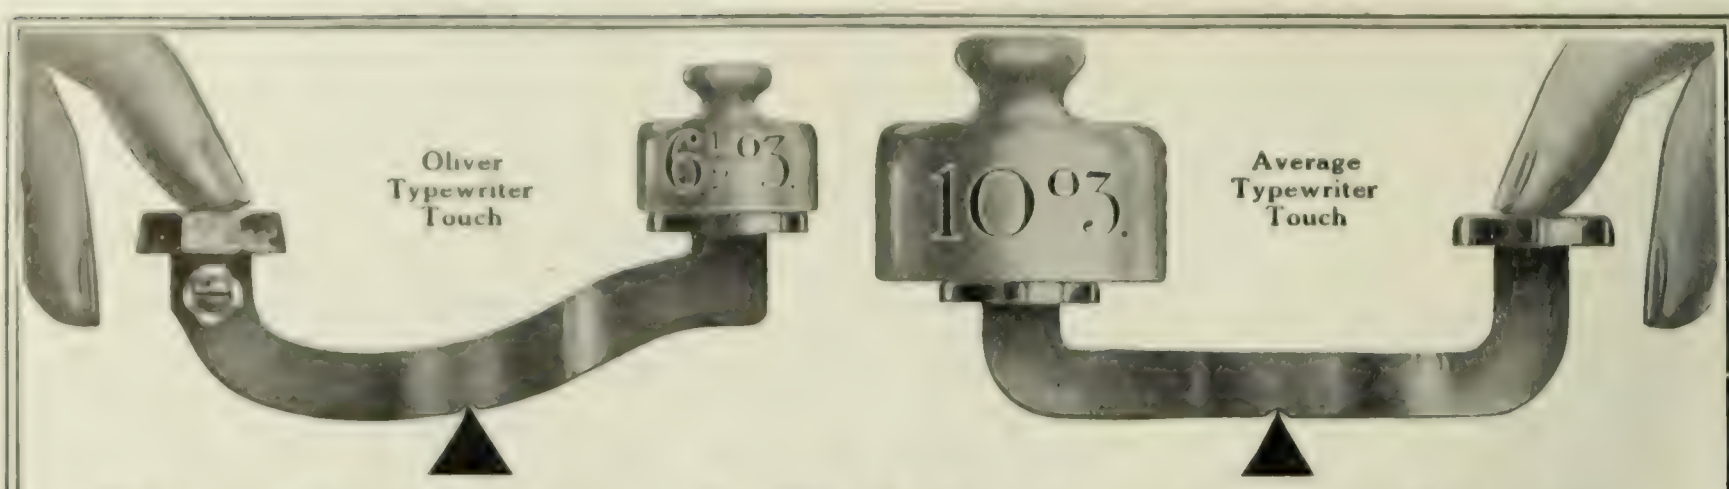
PROGRESS TOWARD ENDING THE SALOON

BY WALTER E. LANPHEAR
FIELD SECRETARY OF THE CONNECTICUT TEMPERANCE UNION

The prohibition of the manufacture and sale of intoxicating liquors as beverages thruout the nation is appreciably nearer than it has ever been before.

It will probably be agreed by those of any political party that the personnel of the administration at Washington is such as is calculated to be helpful to this movement. The progress of woman's suffrage seems to be recognized as of good omen for us. This general movement against the traffic is not confined to our country, but has its manifestations in all the European countries and is a world movement. As a nation we have been getting the habit of doing things. We have done things which would have been thought altogether out of the question; therefore we are the more likely to do this thing. The new social and moral consciousness and conscience are facts to be reckoned with in this movement. And last but by no means least, for these general considerations, is to be noted the new economic and industrial sense. It has apparently been thought that business could not get along without liquor, but it is now becoming certain that it cannot get along with liquor.



Specific reasons for the hope that is in us lie in what the Federal Government and Congress have done against the liquor traffic. Carrying liquor by parcel post is illegal, as also by any interstate carrier, C. O. D. The sale of liquor is abolished in army posts and reservations, in old soldiers' homes (where aided by federal grant), in the navy, in both wings of the capitol at Washington. Congress appropriated in one year $100,000 for enforcing the law against the sale of liquor to the Indians, and $1200 to enforce that against the sale to natives of Alaska. Last but not least (and the worst body-blow Uncle Sam has ever delivered the traffic) is the Kenyon-Webb law. One who fails to see in all this a possibility and promise as to what action will be taken on this proposed measure in the not distant future by the powers at Washington, must be very much in need of sight.

Not less important specific evidence as to the success of this movement is seen in what the lesser units of Government have done. At this fall's elections Arizona, Colorado, Oregon, Virginia and Washington voted out the liquor traffic. These five states, taken with nine others (Georgia, Kansas, Maine, Mississippi, North Carolina, North Dakota, Oklahoma, Tennessee, West Virginia) make a total of fourteen states that have voted out the traffic, tho the laws in the five states do not take effect as yet. These fourteen states, together with the "dry" territory in other states, give a total of more than seventy-four per cent of our national area to the dry side.

It is reported that in Idaho and Alabama a safe majority of the legislatures just elected are favorable to prohibition for their respective states, and the Missouri legislature is favorable to the plan of county option. Altho Ohio lost in her campaign for state prohibition it was only because the wet vote of some of the large cities overbalanced the dry majority of all the rest of the state.

In all the states south of the Mason and Dixon line there are less saloons than in the one city of Chicago, by about 1700. In thirty-six of our states together (the number required to ratify this amendment) there are fewer saloons than in the one city of New York. Forty-seven per cent of our people live in no-license territory. The year 1907 had as high a per capita consumption of liquor as any years since (with the possible exception of 1913) which means, considering the natural growth of our population and the number of immigrants coming annually from countries where the per capita consumption is about three times what it is with us, that we have accomplished the equivalent of converting to total abstinence about two million average Americans each year since 1907. Twenty years ago we had about sixteen millions of people living in dry territory; now we have more than forty-nine millions, which means that we have done the equivalent of bringing into dry territory more than one and a half millions each of these twenty years.

For many of these facts and figures I am indebted to the year-book of the Anti-Saloon League, having taken pains to get assurance that its statements are reliable. And that league is the organized force that is specially looked to for the carrying on of this fight. It is organized in every state and in the District of Columbia.

Do 5 Tons LESS Labor Daily

Yet Turn Out More Typewritten Work

The new Silent Seven Oliver Typewriter has the *lightest touch known.* Every day it saves the typist an amount of labor equal to moving a 5-ton load, a spoonful at a stroke. Here is the greatest typewriter triumph since we first gave visible writing to the world.

How to Prove This

Take three or four standard typewriters.

Then place small weights on the tops of the keys till sufficient to make the type print.

Note that the average typewriter requires *10 ounces* of pressure before it will write. Thus you measure the force with which the typist must strike each key in actual use.

Note that the Silent Seven Oliver writes when *6½ ounces* are placed on the type keys—just equal to a gentle finger-tap. Note that the Oliver thus saves the typist *3½ ounces of energy at every tap.*

Now multiply this by 50,000—the number of times the average operator strikes the type-keys daily.

Thus do you reach this amazing result—***the Silent Seven Oliver saves the typist daily labor equal to moving a 5-ton load!***

The Silent Seven

A benefaction to all mankind—this new model Oliver.

Not a toy or a make-shift. Yet by utter simplicity as handy for use at home as efficient for use in the office.

Visible reading, visible writing, automatic spacer and universal keyboard arrangement, with fewest keys of any typewriter. Then a score of improvements and refinements that raise this typewriter to the pinnacle of attainment.

The OLIVER No 7 Typewriter

"Silent Seven"

The Standard Visible Writer

Pay 17c a Day

The price of the Silent Seven Oliver has not been increased by a dollar. Yet we give you by careful estimate *25 per cent more value.* And we let you buy on our popular purchase plan—17 cents a day.

As easy to own as to rent!

New Typewriter Book Free

It pictures and fully describes the new Silent Seven Oliver; it coaches you on points that others dare not give. It shows how the novice can start and write at once, without schooling, without skill.

Today!—send us the coupon before the edition is gone and one of these handsome books will come by return mail free.

Money-Making Agencies Open

Apply today and earn a handsome income as the local agent for this supreme typewriter that sells itself repeatedly when agents show the sample we supply. 15,000 others like yourself—physicians, clerks, attorneys, merchants, teachers, bankers, telegraphers, etc., etc., are earning incomes this way during spare hours or full time. And this big concern has now decided to give out 50,000 more local agencies.

Acquire Sample Typewriter

Our plan lets you own a brand new Oliver on the same liberal terms as our oldest and most experienced agents. And we let you sell to the public the same as we do—17 cents a day. You don't have to charge your business. You do not need to be experienced.

Get free copy of "Opportunity Book" that tells how we give you *exclusive* sale in your territory *and the profit from every Oliver so sold during your agency arrangement.* How we help aggressive agents build up a strong, independent business by furnishing them names of prospective buyers that come through our mighty magazine advertisements.

Don't wait till your territory is assigned. Don't hesitate because there was once an Oliver agent in your town. Remember there are always scores of promotions, transfers, etc. Just mail the coupon. You incur no obligation. The time to act is NOW!

Which Book Shall We Send FREE?

Put a cross (X) in the square before the book you want free, fill in your name and address and mail this coupon to

VOLUME 80 MONDAY, DECEMBER 7, 1914 NUMBER 3444

FOUR MONTHS OF THE WAR

AFTER war for four months on a scale unparalleled in the history of the world, involving four continents and all the seven seas, the verdict of victory has not been given. If this were the mimic warfare of the maneuvers—would that it were!—and the umpire should call time today he probably would pronounce it a drawn game. If he decided by territorial gains he would say the Germans have won. But if he took into consideration positions and prospects he would say that the advantage lay with the Allies. Considering the war on the sea the decision would be the same. The Germans are reported to have lost twenty-five naval vessels and the British twenty, but if we count by size instead of numbers the advantage lies the other way, for the tonnage of the British losses is more than three times that of the Germans. Both sides, however, have avoided a general engagement; so their naval strength stands about as it did before the war, that is, the German fleet is about half the size of the British, to say nothing of the French and Russian. So here we may also say that the honors are even, but the Allies have the advantage.

The Germans have been so far successful in their policy of carrying the war into the enemy's country. Except for the Russian occupation of the greater part of the province of East Prussia and a French raid into Alsace in the first weeks of the war, German soil has been free from invasion, and if the war should be brought to an end now as the Russo-Japanese war was by the peace of Portsmouth on the basis of *uti possidetis* or of ground actually occupied, the Germans would have gained more territory in Europe than even their jingoes dared hope for before the war. They now hold all Belgium except the little corner below Ostend, a half dozen departments of northern France and an indefinite amount of Russian Poland. The only German territory now under a foreign flag is a strip some ten or fifteen miles wide along the frontier of East Prussia. The Austrians have lost half of Galicia and gained a bit of Servian territory.

WHEN we consider the course of the war we are struck by the curious alternation of German fortunes in the eastern and western theater of operations. During the first month of the war, while the Germans were sweeping over Belgium and into France, the Russians carried their invasion of East Prussia to the gates of Konigsberg and Thorn. In September the Germans retired from the Marne to the other side of the Aisne, where they took up the positions they yet hold. Simultaneously the Russians were driven from East Prussia and the Germans invaded Russia as far as the Niemen River. While the Germans were being driven out of Russia they took Antwerp and advanced to Ostend. Foiled in their effort to reach Calais they advanced on Warsaw instead. When they gained on one side they lost on the other.

The reason of this is obvious. The Germans could not be in two places at the same time. They have been outnumbered from the start on both frontiers and the odds against them have steadily increased. The French army, reinforced as it was by the Belgians and British, was greater than the German. On the eastern side they were at a still greater numerical disadvantage. But battles are decided not by the total number of soldiers in the army, but by the number that can be brought to a particular place at a given time. The Germans have won their field victories by means of their mobility. Thru skillful handling of transportation facilities they have rushed their forces as needed from one end to the other of a two-hundred mile line of battle and from the French frontier to the Russian. The chief problem of German strategy for many years has been the defense of the country against a simultaneous attack on both sides and the German state railroads had been planned with special reference to facilitating this fighting on interior lines which the position of Germany rendered possible and necessary.

BOTH sides have fought so well as to gain mutual respect and to shatter their favorite theories of the inferiority of the enemy. For instance, the English have always been willing to concede that the Germans might gain an advantage at the start by reason of thoro organization and careful planning, but they assumed that once these plans were overthrown the German military machine would break down because of constitutional inability to alter its rigid system to meet new conditions. But, on the contrary, the Germans have shown a remarkable quickness of adaptation to emergencies which could not have been foreseen.

Paris had always been their aim and it was almost within reach when General von Kluck, apparently without a moment's hesitation, turned away from it and executed a left wheel in face of the enemy in order to close the gap between his army and that of the Crown Prince. General von Hindenburg's first attempt to invade Russia from East Prussia was a disastrous failure, yet within ten days after his defeat at Augustowo he had occupied half Poland. Routed here and driven back to the German border he had started a new Polish campaign in less than a week.

Equally fallacious is shown to be the belief that the Russian army is a slow and unwieldy mass, for everywhere that von Hindenburg struck he found the Russians prepared for him. Nor will we hear more about the

decadence of the French. If individual valor and military skill be the test of virility the French race has not declined. The Kaiser, who alluded to "the contemptible little army" of General French must by this time have changed his opinion. It is no longer little and it never was contemptible. We Americans who believe in keeping down the standing army to the lowest limit consistent with safety may find great encouragement from the fact that the British, starting with a nucleus of experienced men, have been able to bring their army up to near the million mark in a few months and that the new men are holding their own against the best trained troops the world has known.

There has been no lack of patriotism or courage shown in any of the ten nations engaged. The people have manifested equal loyalty to Czar or Kaiser, King or President. There has been no collapse of *morale*, no gross ineptitude, no wholesale surrender, no scandalous mismanagement, no treacherous betrayal, no unsuspected weakness. An impartial umpire would have to give all the armies some meed of praise and to declare that the war has proved that every one of the races involved from Russian to Japanese and from German to Gurkha has proved by his valor and self-sacrifice that he has a right to his place in the world. Let us hope that none of them be deprived of it.

RATIONAL NEUTRALITY

MR. JACOB H. SCHIFF is an American citizen of the highest type. He is an international financier; he is an international philanthropist. He is an American of fifty years standing, but he is of German birth and has by no means given up his German sympathies.

In an interview in the New York *Times* Mr. Schiff presents a point of view in relation to the outcome of the war which is as interesting as it is novel. He wants Germany to be victorious, but not to be "too victorious." He believes that the success of England would impose upon the United States a tremendous burden of militarism. In this connection he says:

> I fear that the American people as a whole have visualized only slightly, if at all, the real peril involved in this contingency; but I cannot feel otherwise than sure that soon they must awake to the great danger that militarism and navalism may be imposed upon them thru no fault of their own.
>
> American impulses trend away from armament toward peaceful development along industrial lines, but even now political leaders in Washington begin to see what may be coming. The propositions which already have been made for considerable increases in our naval and military forces may be regarded as only the forerunners of what is to be expected later.

As an American, therefore, Mr. Schiff does not want the Allies to win. But neither does he want Germany to win by too big a margin:

> My sympathies and interests, in other words my patriotic sentiments, are definitely American. I must repeat that I am of German origin, and that as regards the present struggle I am pro-German, yet it would be impossible for me to say that I am anti-English, altho I am anti-Russian for reasons that are obvious.
>
> I already have exprest the belief that the complete humiliation of England would be disastrous to us. Now, it seems to me that if Germany should be completely successful, if she should be able to wear out the Allies, break down France, hold Russia in check, and cripple or even invade England (which many German leaders actually believe can be done, incredible as it may seem to us), Germany would acquire a position such as never has been held by any nation since the beginning of history. Not even the power of the Roman Empire would approach it.
>
> The advance which has marked the development of every means of communication, transportation, manufacturing, etc., since Rome's day, would give Germany, in the case of such an eventuation, a power which would have been inconceivable to the most ambitious Roman emperor. It would make her a menace, not only to her immediate neighbors, but to the entire globe.
>
> Could she be trusted with such power? Notwithstanding my personal sympathies, which I have taken pains to outline clearly, I must admit that I cannot think so. The German character is not only self-reliant, which is admirable, but it readily becomes domineering, particularly when in the ascendancy.
>
> In the rôle of a world conqueror Germany would become a world dictator—would indulge in a domination which would be almost unbearable to every other nation. Particularly would this be the case in respect to her relations with the United States, a nation with which she always has had and always must have intimate commercial relations.
>
> Should Germany make England impotent and France powerless, we should become more or less dependent upon German good will, and it is highly probable, indeed I regard it as a certainty, that before long, in such an event, the Monroe Doctrine would cease to exercize any important influence on world events. It would become a thing of the past —a "scrap of paper."
>
> You see that while I am not neutral to the extreme, while I fervently hope and pray that Germany may not be wrecked and that she may emerge from the war with full ability to maintain her own, I cannot believe that it would be good for her or good for the world in general if she found herself absolutely and incontrovertibly victorious at the end of the great struggle. In other words, I wish Germany to be victorious, but I do not wish her to be too victorious.

This is a position in which, *mutatis mutandis*, every American should be able to join. Some of us want Germany to be victorious. Some of us want the Allies to be victorious. None of us ought to want either side to be "too victorious." None of us ought to want any nation of Europe to be beaten helpless to the earth.

THE SCRAP OF PAPER

IT is a bitterly debated question whether Germany, when it sent its armies thru Belgium, violated the terms of any treaty to which the German Empire was party. The most able presentation that we have seen of the negative side of this debate is from the pen of Professor John W. Burgess, of Columbia University. He rests his case upon these contentions:

The original treaty guaranteeing the neutrality of Belgium was signed on April 19, 1839, by Great Britain, France, Prussia, Austria and Russia.

A few days later it was ratified by the German Confederation, of which Prussia and Austria were states.

In 1866 the German Confederation was dissolved, and in 1867 the North German Union, of which Prussia was the largest state, was formed.

That these changes abrogated or made obsolete the guarantee of the Treaty of 1839 is shown by the fact that when the War of 1870 broke out between France and the North German Union, Great Britain sought and procured from the governments of France and the North German Union separate but identical treaties, guaranteeing the neutrality of Belgium during the period of that war and for one year from the date of its close.

These treaties expired in 1872 and the present German Empire has never signed any treaty guaranteeing the neutrality of Belgium.

Finally, a convention was drafted by the Hague Conference of 1907, which read, "The territory of neutral powers is inviolable. Belligerents are forbidden to move troops or convoys of either munitions of war or supplies across the territory of a neutral power." But, to

quote Professor Burgess's words, "Great Britain, Germany, Austria-Hungary and Italy refused to sign it and did not sign it. Russia was not represented."

These facts, in Professor Burgess' estimation, enable us more clearly to understand why the German Chancellor referred to the guarantee of Belgian neutrality as a "scrap of paper."

Professor Burgess' statement of the facts, admirably succinct and clear, is as we understand the matter precisely accurate with one important exception. According to the authorities at our command, Germany, Austria-Hungary, Italy and Russia did sign the Hague neutrality convention. Aside from this point, however, Professor Burgess shows that those who maintain that Germany violated no treaty in forcing its way thru Belgium hold a strongly defensible position.

But, even if his conclusions from these facts be fully conceded, Germany gains nothing by the concession.

In presenting to Belgium the alternative of permitting the free passage of German armies or being treated as an enemy, Germany committed a foul wrong. It violated, if you will, no treaty. But it violated the essential canons of international honor and fair play.

Belgium was a neutral nation. With the very birth of Belgium as an independent state, its neutrality was recognized by the great nations of Europe. When a war broke out in 1870 which promised to threaten its neutrality, that neutrality was again formally recognized by the three great nations lying nearest. Belgium's neutrality needed no "scrap of paper" to guarantee its permanence. It needed only good faith and an honorable recognition of an existing state of affairs on the part of its more powerful neighbors.

There is no evidence that Belgium ever intended to be anything but neutral. It is true that it is circumstantially reported that German officers have found in the Belgian archives plans for the sending of an English expedition to the defense of Belgium in the case of attack by Germany. This may be true. But it proves nothing as to Belgium's intention to be anything but neutral. It merely proves that Belgium feared Germany and looked to Great Britain for protection. The justice of Belgium's fear needs no demonstration.

Belgium was neutral. Germany's ultimatum to Belgium gave it not two alternatives, but one. Belgium must forsake its neutrality. It must take sides in the quarrel. For the moment Belgium should permit the use of its territory as the road for a German attack upon France, that moment it would become not a neutral, but a partizan, not a bystander, but a participant.

Germany forced Belgium to become the ally either of Germany, which threatened attack in case of refusal, or of France, which had already agreed to respect its neutrality, and of Great Britain, which had promised to defend it. Is it any wonder that a self-respecting people chose the honorable alternative?

It does not matter whether Germany did or did not sign the Hague Convention in relation to neutrality. For the inviolability of the territory of neutral nations does not depend for its validity upon written agreements. It finds its sanction in the immutable principles of international justice and the rights of man.

Not a scrap of paper, but a decent respect for the opinions of mankind should have made Germany keep faith with Belgium. Granted that the German Empire did not break its word, the German people did a baser thing. They sacrificed their own integrity of character. They violated their own honor.

THE RIGHT TO WORK

UNDER an obsolete statute which says that only citizens can be employed on public works, 13,000 aliens have been denied the right to help build New York's subways. Because they are foreigners who have not yet attained American citizenship they are told they cannot work. Allowed to enter our ports with little other capital than their two hands, they are not permitted to earn a livelihood in the only way open to them. It is a curious paradox to open the door to the immigrant, and then do all in our power to make him a public charge.

The Masons' and Bricklayers' Union, which thus chooses to block the relief of congested Manhattan, says that in times of industrial depression and unemployment it is the American workingman who first must be provided for. They invoke a law, handed down from the old "Know-Nothing" days and still on the statute books of New York and eight other states. This law provides that the day-laborer on a public work must be an American citizen. In the same way Michigan decrees that all barbers must be citizens, Idaho that all school teachers, and Philadelphia that all peddlers must be citizens. The contractors who are building the subways are willing to employ native workmen, but contend that in spite of their offer of forty cents an hour for unskilled labor they cannot get citizens who are willing to do the work. While we are thus protecting American laboring men who no longer will wield the pick and shovel by making prohibitions against those who will, construction of the much-needed transportation lines comes dangerously near a standstill.

It is time that such anachronisms were done away with. They discriminate against the immigrant in the one thing that he needs most when he lands on American soil and that America needs most from him. They deprive him of his right to work.

THE RICH MAN, THE POOR MAN AND THE LAW

IS there one law for the rich and another for the poor? Every time the question raises its horrid head with something like affirmation in its eyes, one cannot but feel his faith in government and law-making and the essential justice of democracy shaken to its base.

Thousands of the people of New York City—people of modest means—lost the savings which they had entrusted to Henry Siegel the banker because Henry Siegel the merchant used their deposits in a vain effort to bolster up a tottering business venture. The merchant Siegel's department stores failed and the banker Siegel's depositors lost over two millions of dollars.

Henry Siegel has just been tried and sentenced to pay a fine of $1000 and to serve ten months in jail. But his jail sentence has been suspended.

The disproportion between what those who trusted him suffered and what he himself is to suffer is overpowering.

It is not clear that prosecutor or jury or judge could

have done more than they did. The judge suspended the jail sentence until June to give Siegel an opportunity to show that his announced intention to make restitution was sincere. Doubtless the judge served the defrauded depositors better thus than if he had sent Siegel to jail.

But the root of the matter is not there. Something is wrong with the law. When a man acting in a fiduciary capacity can appropriate to his own purposes two million dollars of other people's money and escape with little more than a perfunctory scolding, the law has made a flat failure of its prime duty of protection.

No pickpocket could steal a gold watch and escape with so small a penalty.

Is there one law for the rich and another for the poor? It looks so.

THE FRONT DOOR OR THE BACK

IT has been a sort of family quarrel for years, ever since in fact the old homestead in extending backward from the road by the addition of new rooms to accommodate the family had found that its west door opened on another highway. Those who lived in this part of the house at once set up the claim that this was really the front door since it opened on the widest street and the house had been growing in that direction. But those members of the family who lived in the other end of the house, the part that was built by the first settlers nearly four hundred years ago, insisted that the front door was where it always had been and if the old street was not so wide as the new one at the western end of the house—well, they said they would rather have a narrow street with nice neighbors over the way than the widest boulevard with an overcrowded slum on the other side, not the sort of people one would want one's children to play with, anyway.

So the dispute went on as such things will; not, you understand, leading to blows or harsh language, for it was a very peaceable and well-behaved family on the whole. But there was some hard feeling, particularly on the part of the younger members of the family living in the west addition, who complained that while they were always running to the other end of the house the old folks hardly ever called on them, some of them indeed had never seen the new rooms or sat on the new porch to watch the sunset beyond the gate, the Golden Gate, the young people called it, to distinguish it from Hell Gate, which was at the opposite end.

Finally the young people decided to give a party in honor of a new driveway that had been made around the house, for they said if the old folks wouldn't come thru the central hall perhaps they would come around this way. So the younger set put on their best clothes and fixed up things as pretty as they could in the yard next to the Golden Gate and invited everybody. Still they were doubtful about getting the old folks to come because, as their children complained, they seemed fonder of calling on the people across the street than on their own kin-folks. But it so happened that the people across the street had a great falling out just then, got to throwing things in fact and hitting each other over the head in the most shameful fashion, and visitors were actually afraid to go into the houses. So the young people in the west end of the house are in hopes that lots of their eastern relations will take this opportunity to come to their party and they are sure that everybody who comes will say that the front door of the household really opens toward the west. Young people are like that.

A CHANCE FOR PEACE IN COLORADO

PRESIDENT WILSON has again taken a step for the solution of the grievance problems of capital and labor in the Colorado mining fields. He has appointed a commission of three to stand ready to arbitrate any differences between operators and miners that may be submitted to it, under circumstances more fully reported in "The Story of the Week."

The President has done well. Both miners and operators will also do well if they avail themselves of the instrumentality which he has created. No man should be judge in his own cause. In so serious a disagreement as persists in Colorado, an impartial and high-minded commission can see the truth better than either party to the dispute. Here is such a commission. Let the disputants make use of it.

THE IMPOSSIBILITY OF ENCORES

"ENCORE! Encore!" cry the crowd, and the singer comes back to the stage to repeat the song. The effort is in vain. The song cannot be repeated altho it be word and tone the same. For it takes as many to make a song as it does to make a quarrel—and one of them, the listener, has gone forever. The man who sits in his place looks like him, but he is really a different man, namely the man who has heard the song. The song may sound better to him the second time, it may sound poorer, but it can never sound just the same to him as when he first heard it.

And it is with soup as with a song. We raise the spoonful to our lips and taste. We like the taste and dip the spoon again into the plate that we may repeat the sensation. But we are disappointed, for our palate is no longer to be taken by surprize, but receives it with the expectation of experience. A half a dozen spoonfuls more and we push aside the plate unemptied, for the soup, we say, has grown cold and stale, whereas the fault is really with us who have grown cold and stale.

But we will credit the whole world with change rather than confess to having changed ourselves. If when we revisit the village of our birth we find the buildings and the people smaller than we remembered them, we do not suspect that we have grown, so we go about trying vainly to revive the emotions of childhood. But we have come to the wrong place for that. We should have gone instead to Timbuktu or Moose Jaw, for it is only in a strange place that we can look about with the open eyes of the child to whom the world was all a strange place, and therefore worth the looking at.

We must, then, fare forth into the unknown if we would repeat a pleasure. In front of us alone the path lies open, for day by day as we march forward we burn our bridges behind us. The effort to look backward brings to us but dizziness of the head and stumbling of the feet. The past that we would relive lies only in the future, and if we retain our capacity to feel, to learn and to act, we may find again among new scenes and fresh faces the joys of former times.

THE STORY OF THE WEEK

The Shelling of Zeebrugge

The only unusual feature of the week in Flanders is the bombardment of the Belgian coast by the British warships for the purpose of destroying the German naval base which threatened England. After the capture of Antwerp the Germans hastened forward toward the English Channel, with the aim of taking Dunkirk and Calais, which would bring them within sight of the cliffs of Dover and give them a harbor from which to prey upon English shipping or start an invasion. But they were not able to get beyond Nieuport, ten miles from the French border, for the Yser River, which here flows into the sea, formed a moat behind which were assembled French and British troops, with the remnant of the Belgian army which fled from Antwerp the night before its fall.

This moat and living wall has held back the Germans ever since October 15, altho the Kaiser has thrown against it his own Prussian Guards, with his personal injunctions to break thru at any cost. The line from Nieuport to Lille, along which the armies are entrenched, has scarcely shifted five miles at any point in six weeks of the hardest fighting that the world has ever known. Recently there has been a slackening of effort in this region, due to the exhaustion of the troops, the cold weather and the flooding of the lowlands between Dixmude and Ypres by the breaking of the dikes.

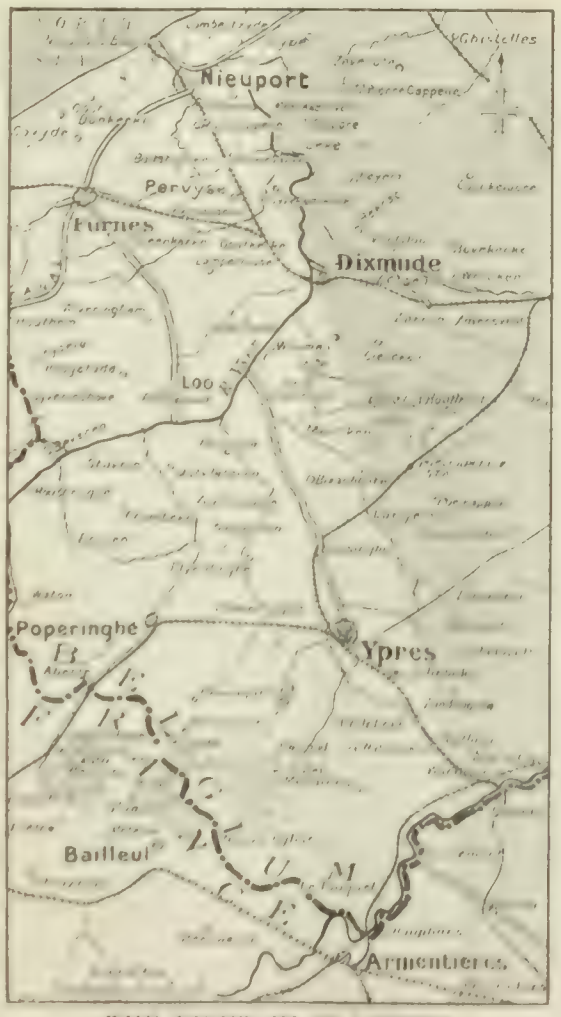
The Germans, when they found themselves frustrated in the attempt to reach the Channel ports of the French coast, turned their attention to making the most of the Belgian ports in their possession, which, tho not so near to England as Calais, were yet 300 miles nearer than Emden, the first German port on the other side of the Netherlands. They found a harbor half made to their hand in Zeebrugge, the new port of Bruges. Here the Belgians had constructed an artificial haven by means of a curved jetty a mile and a half long and 165 feet wide. This was connected with Bruges by means of a ship canal 230 feet wide and 23 feet deep, so that ocean vessels could be loaded in the city. Another canal from Bruges to Ostend connected with the network of watercourses which extends thruout Flanders and into France. On the Zeebrugge harbor and ship canal the Belgians have spent over $10,000,000 since 1895.

THE GREAT WAR

November 23—Russians retake Gumbinnen in East Prussia. Turks claim to have defeated Indian troops east of Suez.

November 24—British warships bombard Zeebrugge on Belgian coast. Portuguese parliament votes to support Allies.

November 25—German invasion of Poland checked at Lodz by heavy counter attack from Russians. Germans massing troops at Arras.



November 26—British battleship "Bulwark" blown up in Thames. Austrians defeated by Russians east of Cracow.

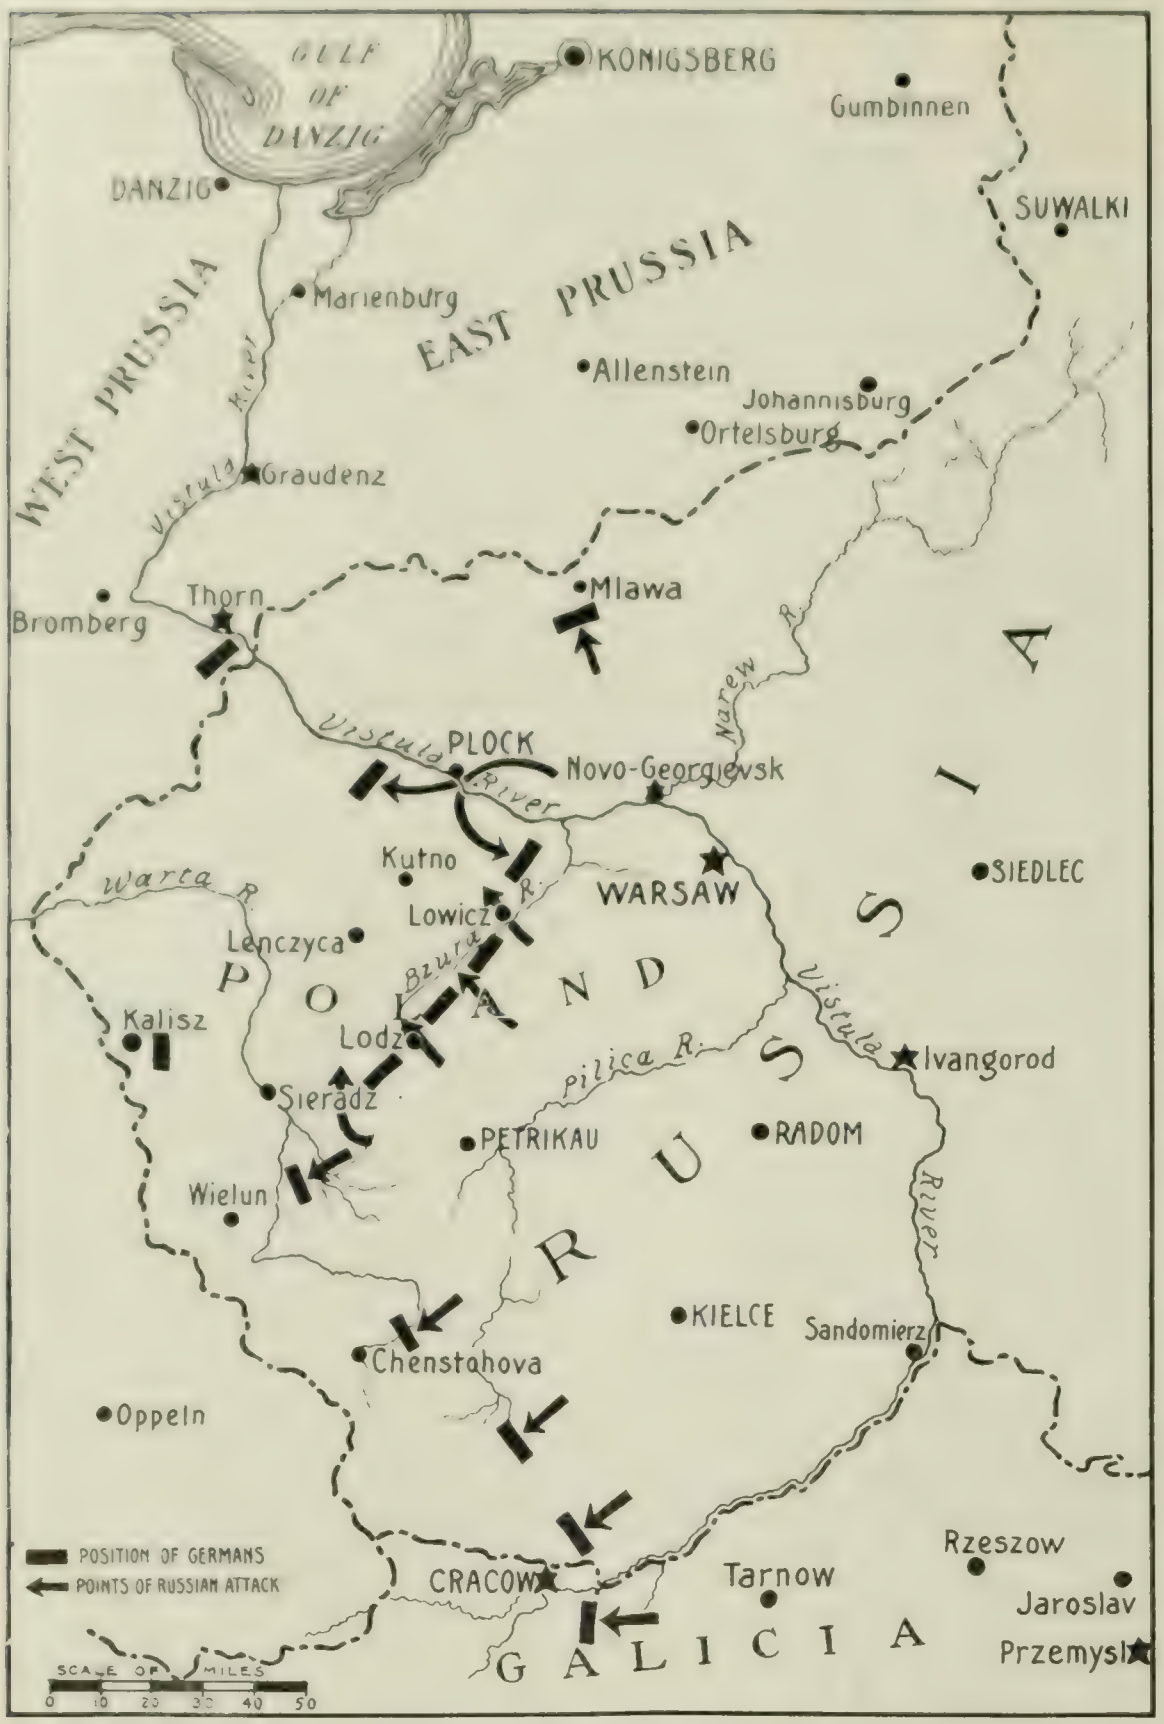
November 27—German forces in Poland divided and partly surrounded by Russians. German submarines sink two British steamers in English Channel.

November 28—In the fighting between the Warta and the Vistula both Russians and Germans lose heavily, but result uncertain. Austrians advance southward in Servia.

November 29—Germans attack in Argonne and Vosges. Russian invasion of Hungary thru Carpathians repulsed.

When the Germans took possession of Zeebrugge they expelled its few inhabitants and installed their own machinists. Big guns were mounted here and submarines brought by rail from Germany were put into commission. On November 23 and several succeeding days four British ships bombarded the German positions and harbor works for several hours, expending nearly a thousand shells. As to the amount of damage done there is a difference of opinion. According to British reports their shells struck the submarines, set fire to the oil tank, silenced the batteries and damaged the locks. According to the German reports the bombardment did no other damage than demolishing two fishermen's houses and one factory chimney and wounding one man, for the submarines dived at the first shot and stayed under water till it was over. None of the shots from the German guns reached the British vessels.

THE FIGHT IN FLANDERS



The shaded territory represents the extent of the German invasion. The double lines are canals.

The Battle of Lodz

The pending campaign in Poland is one of the greatest and possibly one of the decisive battles of the world's history. The issue is still uncertain and the details obscure, but we have sufficient information to appreciate the magnitude of the operations and the importance of the issues dependent upon them. As we stated last week, General von Hindenburg, after his defeat before Warsaw, made a rapid retreat to the German border and promptly reformed his army at Thorn for a second invasion of Poland between the Vistula and the Warta rivers. At Vloclavsk, half way between Thorn and Plock, he encountered the Russians and defeated them in a battle lasting from November 12 to 16. This permitted him to pass on to Lowicz and the Bzura River, a tributary of the Vistula, only about thirty miles west of Warsaw, where he entrenched.

At the same time the right wing of the invading army, commanded by General von Mackenzen, advanced along the Warta to Leczyca and gained possession of Lodz, November 20. As a reward for these successes the Kaiser raised General von Hindenburg to the rank of field-marshal. This honor he acknowledged in the following general order to his army:

I am proud of having reached the highest military rank at the head of such troops. Your fighting spirit and perseverance have in a marvelous manner inflicted the greatest losses on the enemy. Over 60,000 prisoners, 150 guns and about 200 machine guns have fallen into our hands. But the enemy is not yet annihilated. Therefore go forward

THE SCENE OF THE GREAT BATTLE OF LODZ

Here between the Vistula and the Warta von Hindenburg and the Grand Duke Nicholas are fighting a decisive engagement

with God for our King and the Fatherland till the last Russian is subdued and at our feet. Hurrah!

But the rejoicing was premature, for the Russians took the offensive all along the line on November 25, and soon put the invaders in a serious situation. The Russian counter attack was made at three points; they turned both flanks and penetrated the center of the German lines almost simultaneously. A Russian force, apparently crossing the Vistula above Plock, appeared in the rear of the German left entrenched on the Bzura. A second force outflanked the German left on the Warta side, and a third struck between Lodz and Lowicz and divided the left under General von Hindenburg from the right under General von Mackenzen. The latter was thus virtually cut off and the Russians claim to have captured some forty thousand of his troops near Lodz.

Four German armies were sent to the rescue. One under the Crown Prince entered Poland from Breslau, and passing thru Wielun crost the Warta, where it is reported to have been defeated. Another, composed chiefly of Austrians and coming north from Chenstochova, is also held in check. General von François is invading Poland from the east by way of Mlawa, while from Thorn a fourth army is on its way to the scene of combat.

Russians Approach Cracow

The Russians continue their advance westward along the railroad from Lemberg to Cracow, and have now past beyond their former high-water mark of Tarnow, which they reached in September and then had to abandon because of the success of the Germans in Poland. They have now got as far as Bochnia, a railroad station about twenty-five miles east of Cracow. Their front stretches across Galicia, from the Vistula River on the north to the Carpathian Mountains on the south, and they are apparently sweeping all before them. On November 20, according to Petrograd, the Russians routed the Austrians in this locality and took more than 7000 prisoners.

There is another Russian army approaching Cracow on the northern side of the Vistula, which here forms the boundary between Galicia and Poland. This also is within twenty-five miles of the city, so an attack from north, east and probably also south may soon be expected. Cracow is strongly fortified and should be able to hold back the Russians for some time, as it would not be safe for them to mask it and pass on, as they did in the case of Przemysl. But Cracow, standing between the river and the mountains, bars the way to Vienna or Silesia. It is possible, however, that city may surrender after a short siege, for the Poles are very unwilling to see its historic buildings destroyed by a bombardment for the defense of Austria.

The people of Galicia are in even greater distress than those of Belgium, for they are poor and the country has been fought over twice by the Austrians and Russians in the past four months. Fugitives by the hundred thousand have sought refuge in Austria and Hungary, but most of the Ruthenian peasantry and the Jews, who form a large part of city population, are unable to get away and so face starvation this winter. The Austrians, as they regained the country occupied by the Russians, wreaked vengeance on the Galicians, who had welcomed the Russians, and are said to have executed more than a thousand men. In the vicinity of Przemysl there are reported 3620 homeless families.

The fortress of Przemysl, which the Russians past by on their way to Cracow, is still under siege. According to Russian reports, the sorties have been repulsed with great loss and the garrison has offered to surrender on condition of being permitted to march out with arms and baggage. The Russians refused to concede these terms, believing the gar-

rison was short of ammunition and unable to hold out much longer. But the garrison sends out word by pigeon post and aeroplane that the Russian bombardment has not injured the town and that it can hold out a year.

The Cossacks have, in spite of the wintry weather, again penetrated the passes of the Carpathians and entered the plains of Hungary, where, however, they are reported to have been defeated.

The Attack on Suez

The chief object of the Germans in bringing the Turks into the war was apparently to get them to strike a blow at Great Britain's most vulnerable point, the Suez Canal, by which troops are being conveyed from India and Australia to the mother country. What success the Turks are having or likely to have in their invasion of Egypt is in doubt. If we may believe unofficial messages from German sources Izzet Pasha is on the border with a force of 76,000 men including 10,000 Bedouins, with 500 camels, and their advance guard has already encountered and defeated the Indian troops east of the Canal and even reached the Canal itself. The British, on the other hand, say that this is a mere Arab raid of no significance and it will be impossible for the Turks to send a large army across the hundred and twenty miles of Sinai desert that separate Suez from the Turkish frontier.

That the Ottoman Government attaches great importance to this movement is shown by the fact that Enver Pasha and Djemal Pasha, Minister of Marine, have left Constantinople to take charge of the expedition. Enver Pasha has been the leading spirit of the Young Turks ever since he headed the revolution that overthrew the Sultan and it was he who regained Adrianople after it had been captured by the Bulgars.

The Khedive of Egypt has been exiled by the British because of his pro-German attitude and it is reported that they are preparing to put in his place his cousin, Hussein Kemal, son of Ismail Pasha, who ruled Egypt from 1865 to 1879.

Field Marshal Baron von der Goltz, who has served as Military Governor of Belgium ever since the conquest of that country by the Germans, has been sent to Constantinople to assist in the organization of the Ottoman army. He is succeeded as Governor by General von Bissing. General von der Goltz is one of the greatest living authorities on strategy, his works being used as text books in the American army. From 1883 to 1896 he was engaged in the reconstruction of the Turkish army, but the advent of the Young Turk regime overthrew his plans and the Turkish troops did not make a good record in the Balkan war.

A proclamation of a holy war has been signed by the Sultan and twenty-eight Mohammedan priests with the intent to rouse the whole of Islam against the Allies, but it is questionable whether it will be regarded as binding by the Mohammedans in other lands. So far its only effect has been to instigate a mob in Erzerum to demolish the Armenian churches and schools. The Russian troops are said to be making progress in their advance on Erzerum, but on the other hand the Turks seem to be carrying their invasion of Transcaucasia nearer to Batum.

Buying Here for the Armies

Owing to orders from the belligerents in Europe for breadstuffs, munitions, clothing, motor trucks, etc., our export trade continues to grow, and the balance in favor of the United States for November will be much more than October's excess, which was $57,000,000. It is true, however, that this war export movement has not yet been fully developed, because many of the orders were quite recently placed, and the goods have not been manufactured. But already there is such a demand for ocean transportation that freight space commands a premium. For example, at one of the water front terminals in New York last week there were awaiting shipment sixty carloads of knit goods, two trainloads of shoes and twenty-five carloads of "caterpillars," which are traction engines carrying their own tracks, for use on wet ground or marsh land. At the same terminal there have been fifty carloads of motor trucks.

One old company, whose works are in Michigan and Indiana, has an order for $15,000,000 worth of vehicles of one kind or another, and large orders have been taken by several motor factories. It is estimated that the orders obtained by Mr. Schwab in Europe amount to $50,000,000. They include cannon, submarines and projectiles, and 15,000 men are employed at his steel works on full time. In Chicago, 5100 horses were waiting for transportation last week; 1620 were shipped from New Orleans, 1000 from Newport News, and 700 from Portland. An expert horseman in New York has an order for 30,000. Grand Duke Michael, of Russia, has given 1,000,000 pairs of shoes to the French army, and the shoe factories of Massachusetts are making them. A factory in Swanson, Vermont, has an order for $2,500,000 worth of cartridges, but all the arms factories are at work on European orders, several of which are much larger than this one.

Knit goods mills, notably those in Wisconsin, are very busy. We read of separate orders for 1,296,000

WHEN THE DAY'S FIGHTING IS OVER

Bringing in the French wounded at night with the aid of great searchlights, by whose light this photograph was taken

pairs of woolen socks, 400,000 sweaters, 750,000 pairs of cotton socks, 6,000,000 sweater buttons, and 1,000,000 cotton shirts. A trade journal's estimate is that the great armies need 600,000,000 pounds of wool in a year for uniforms, underclothes and overcoats. Several aeroplanes have been shipped to Russia. Greece has bought 500,000 canteens. An order for 300,000 sheepskin overcoats was declined by a Western company because the skins could not be procured. One Chicago firm has an order for $3,800,000 worth of canned meat, and another is to supply 5,000,000 one-pound cans of corned beef. At Seattle there are inquiries for 9,000,000 railroad ties. Shipments of 2,000,000 pounds of absorbent cotton have been made. Large purchases of onions for export have increased the price by twenty-five per cent.

Concerning Neutrality

A few days after the naval battle off the coast of Chile, the British Government complained that the German ships had been assisted by violations of neutrality in Ecuador and Colombia. Copies of protests addrest to those countries were sent to our Government, which was asked to use its influence for a prevention of such violations hereafter. Colombia denies that a wireless station on her coast has been used for the benefit of Germany, and Ecuador says that she ought not to be held responsible for all that takes place on or around the Galapagos Islands, because they are so far from her coast that she cannot subject them to close supervision. The replies were not satisfactory to Great Britain. Application had been made to our Government on account of the Monroe Doctrine. It is asserted now in London, on good authority, that our Government has said it is willing that Great Britain shall deal directly with Ecuador and Colombia as to the violations.

A suggestion from South American powers that our Government should lead a movement for a broad extension of neutral zones in the waters adjoining the countries of this hemisphere is under consideration at Washington. It is also proposed that the belligerents shall withdraw their warships from water south of us and the trade routes therein. Both projects are regarded by the British Government as impracticable. Chile complains that German ships have violated neutrality in the Juan Fernandez Islands. Germany protests to our Government against the attitude of England and France concerning contraband goods at sea, alleging a violation of the Declaration of London. Our Government replies that it does not regard the Declaration as binding, because certain governments now belligerent declined to ratify it without material and extensive modifications.

Colorado's Labor War

President Wilson has decided that he will not appoint a Federal receiver for the property of the Colorado coal mining companies involved in the labor war. He has been advised by Secretary Wilson (formerly an officer of the miners' union) and by the Department of Justice that there would be no legal warrant for such action, which the Federation of Labor has asked him to take. Governor Ammons, of Colorado, and Mr. Carlson, who has been elected to succeed him, are working in harmony to solve the problem. For several months a legislative commission has been making an inquiry, and it recently submitted a report in which it asked him to procure removal of the Federal troops and to "prepare to accept for the people the responsibility of again being a State." It also recommended that he should issue a proclamation commanding all to obey the laws and reminding the people that every able-bodied male citizen between the ages of eighteen and forty-five could be called into the militia if this should prove to be necessary.

The Governor asked President Wilson to withdraw the troops. The President decided, however, to refer the whole matter to a commission, which was appointed on the 29th. It is composed of Seth Low, of New York, president of the National Civic Federation; Patrick Gilday, of Clearfield, Pa., an officer of the miners' union; and Charles W. Mills, a Pennsylvania mine operator, who has had much experience in the adjustment of labor disputes. He assisted in settling the Kanawha strike in West Virginia. At the same time the President published a statement. Reviewing the history of the movement for conciliation, he referred to the plan for a three years' truce, proposed by himself, saying that it seemed to him obviously fair and sensible. Accepted by the strikers, it was rejected by the operators, who "objected to its most essential features." The country, he thought, regretted their decision, and was disappointed. He had waited and hoped for a change in their attitude, but he feared there would be none. Merely to withdraw the troops and leave the situation to clear itself would be doing something less than his duty. Therefore he had determined to appoint the commission contemplated in the plan, and thus to create the instrumentality by which "like disputes" might be amicably settled "in the near future," hoping that both parties might see that it was not merely to their own best interest, but also a duty to the community and the nation, to make use of it. The President's words indicate that the commission is appointed to deal, not with existing disputes, but with those which are to come. Withdrawal of the troops, however, may cause a situation in which the commission's

services can be sought, with reference to the present controversy of long standing.

The Governor and Mr. Carlson urgently requested the Federal Commission on Industrial Relations to postpone the inquiry which it intends to begin at Denver on December 1, but the commission replied that the investigation must not be delayed.

The hearing in the wages controversy which affects ninety-eight Western railroads and 55,000 employees begins this week at Chicago, before a board of arbitration composed of two railroad officers, two representatives of the engineers' and firemen's unions, and Federal Judge Pritchard and Charles Nagel, formerly Secretary of Commerce and Labor. Consent to this adjustment of the dispute was procured by the Federal Board of Mediation and Conciliation.

THE TAUBE ON LAND

Mechanics carrying the planes of a German monoplane to be assembled at a temporary shed near the front. The large black Maltese crosses on the under surfaces of the wings are used to distinguish all the German "birds"

Santo Domingo and Hayti

By agreement with the Government of President Bordas, the recent elections in Santo Domingo were subjected to what was called inspection or observation by a commission appointed at Washington and composed of ex-Governor Fort, of New Jersey; F. H. Smith, an attorney, of New Hampshire, and Minister Sullivan. It now appears that the inspection was really active supervision, for United States marines or American civilians were stationed at every polling place. The number of votes was the largest ever known in Santo Domingo. For Juan J. Jiminez 40,076 voted, and for Horacio Vasquez, a revolutionist leader, 39,632. It was said, however, that Jiminez, altho he had a popular majority, might control only 300 of the 632 votes in the electoral college. Therefore the result was still in doubt, and it was feared that there would be a revival of revolutionary activity. On the 25th, the United States transport "Hancock," with 800 marines, was sent to the capital. There were reports of a new revolt, but it was asserted, a day or two later, that they were without foundation.

In Hayti, where a new Government has been set up by Davilmar Theodore, the successful revolutionist, the merchants are asking New York importers to assist them by advancing money on the coffee crop, and the Government will send to Washington a commission seeking recognition and a loan. Our Government will not recognize the Theodore Government until it has some assurance that the devastating and paralyzing revolutions are to be discontinued. If it consents to assist in the negotiation of a loan, it may ask for such supervision of the customs receipts as it has exercized for some years in Santo Domingo.

Our Troops Leave Vera Cruz

The United States soldiers and marines who had been in Vera Cruz seven months were withdrawn on the 23d, but the battleships remain in the harbor. At two o'clock in the afternoon, all the men were on the transports. In their movement toward the boats they had been followed closely by the Carranza forces under General Aguilar, who took possession of the city. There was no formal transfer of the place to any authority; the American soldiers simply departed. General Funston had been in conference with a member of Aguilar's staff, and there was an agreement as to the action to be taken. In a proclamation, Aguilar promised that foreigners should be protected. He closed the saloons and gave notice that citizens having arms must surrender them within twenty-four hours. The penalty for disobedience would be death, and all thieves would be shot. Our forces had found Vera Cruz a foul city, full of disease. They left it a clean and healthful one.

Good order was maintained by the Mexican authorities, and, on the 26th, Carranza entered the city, passing under an arch of triumph. He came from Orizaba, and he asserted in a proclamation that Vera Cruz was now the only legal capital. He has asked our Government to withdraw the battleships, but they will remain. On a steamship chartered by General Funston 500 refugees left the city and were carried to Galveston.

Zapata has taken possession of Mexico City. When Obregon and his troops withdrew, General Blanco refused to go with him. He came in from the suburbs with 4000 men to preserve order, in answer to appeals from the foreign diplomats. There were riots and looting before his arrival, but the city became quiet after he had put 500 men in jail. It was reported that he had deserted Carranza. On the 24th, however, he left the city with his troops, and Zapata, after some fighting in the suburbs, came in. Blanco went to Carranza, was arrested, and is now in prison at Vera Cruz.

There was much surprize when Zapata and his bandit army preserved order. He had promised the Brazilian Ambassador that he would do this, and he kept his word. There was looting in the interval between Blanco's departure and Zapata's entrance, but Zapata made Saldano, a former chief of police, military governor, and he enforced the laws.

Zapata and Villa

Villa and his army remained at Tula, a short distance from the capital, and there was much speculation as to the relations between him and Zapata. It was reported that the latter repudiated both Gutierrez and the convention. Carranza expected that Villa and Zapata would quarrel. There was some evidence, however,

© Underwood & Underwood

FRENCHMEN IN GERMANY

Nearly all the men here photographed are French soldiers in the great German concentration camp for prisoners of war at Senne

that the two men were acting in harmony. Representatives of Villa entered the city, and several hundred of his troops were received there. One of Zapata's generals was sent to relieve Villa's friend, General Angeles, at Guadalajara. At the end of the week Zapata sent a train to bring Villa to the city, but his entrance was again delayed. Some said that Zapata insisted upon holding the capital for himself, and that Villa would go eastward to attack Carranza.

A report published on the 30th seemed to present new complications. General Pablo Gonzalez, of whom nothing had been heard since his retreat from Queretaro, proclaimed himself Provisional President, it was said, and appointed a Cabinet. He was at Pachuca, forty-five miles northeast of the capital, with 10,000 men. Thus a third Government would be added to those of Carranza and Gutierrez. Villa published a statement, saying he did not aspire to the Presidency, for which he knew he was unfitted. He only desired to make the Mexican people free, and then to rest at his home and enjoy the companionship of his wife.

Villa has not been fortunate in his recent military operations. General Angeles was driven back at Guadalajara and has been recalled. On the east side Villa's forces suffered a reverse near Tampico. It was afterward reported that the Governor of the state, with 10,000 men, had deserted Carranza, and that for this reason Tampico would be easily taken; but the Governor, General Caballero, says the report is false. On the northern border, General Maytorena's long siege of Naco is admitted to be a failure, and he has been displaced by General Rodriguez. Maytorena's forces became demoralized. In parts of the northwest there have been engagements in which Carranza men were successful.

Spain has made complaint at Washington that Zapata, when he took possession of the capital, killed several Spaniards and robbed others of their property. Sanchez Azcona, Carranza's representative at Madrid, says in a telegram that Huerta (now in Spain) desires to come back and assist Villa, and is willing to spend his entire private fortune in support of Villa's cause. Villa has indignantly repudiated the suggestion of such coöperation.

THE ENEMY

If you had been in a certain English trench this is the view you would have had of the German line 180 yards away. You yourself, hiding behind garden truck, would have been firing at a foe concealed perhaps in the same unheroic fashion

WHEN GERMANY WINS

BY DR. BERNHARD DERNBURG

We have heard a great deal about what England and France are fighting for. We have heard very little—except from English sources—about what Germany is fighting for. Here is a chance to read the other side.

Dr. Dernburg stands for what we Americans most admire in modern Germany, its industries, its commerce, its technical schools and its efficient organization. When the Kaiser put him at the head of the Colonial Office in 1907 it was a great shock to the Junkers, who thought that such high positions were the natural monopoly of those of noble lineage and resented the appointment of a business man, and, what was worse, a business man of American training, as successor to Prince Hohenlohe-Langenburg. But the Kaiser was tired of the bureaucratic and military methods of administration in the colonies and wanted to have them developed and made self-supporting instead of remaining a drain on the imperial treasury. Herr Dernburg made a personal inspection of the African possessions and would probably have made them in time as profitable as the British colonies if he had been able to carry out his program of reforms. In The Independent of January 17, 1907, will be found an account of what his administration meant to Germany.

Herr Dernburg is the son of an editor of the Berlin "Tageblatt" and was born in Darmstadt fifty years ago. After graduating from the Berlin gymnasium he came to New York City in order to learn American ways and was for some years in the banking house of Ladenburg, Thalmann & Co. After his return to Germany he became a director of the Bank of Darmstadt. He is now in this country on an important mission. As a man thoroly familiar with American history and politics as well as finance he understands our point of view and can interpret to us the point of view of his own country. Those whose enterprise has brought their country into the front rank of commercial nations within a single generation are better representatives of the real Germany than militarists or semi-Slavonic theorists. — THE EDITOR.

WHAT will Germany do if she is entirely victorious?

This question has been addrest to me by a number of American friends, time and again. And when I said that it seemed to me premature to make any such forecast, I was met with the reply that the allies were not so over-cautious, and had very freely said what they intended to do to Germany and Austria if they got the chance.

The most lenient of these programs runs about like this: The crushing of German militarism (Mr. Asquith); the destruction of the German fleet (Winston Churchill); the reduction of Germany to a subordinate power, the breaking up of the Prussian hegemony (Lloyd-George). Of course, Belgium is to be restored and a large slice of German and Dutch territory to be added to it; Alsace-Lorraine is to be returned to France with a big indemnity in land on the left bank of the Rhine; the Polish provinces of Germany to go to Russia; Schleswig-Holstein to Denmark. And a similar program has been announced as regards the Austrian-Hungarian monarchy. Finally, of course, Russia is to conquer Turkey and to absorb the whole Ottoman Empire. In short, what is intended is to reduce Germany to the position she had in 1806 after the victories of Napoleon I, which would strike her out of the list of the great nations and would make her subordinate to the good will of the victors.

That such a program can never be carried thru, even partially, as long as there remain a hundred thousand Germans capable of bearing arms, need not be emphasized.

But that (in view of these acknowledged demands of the allies) it might be of some interest to Americans to know what Germany would do if she was in the position in which the Allies love to mirror themselves in, I will concede.

I am speaking here as a thinking German, who knows the history of his country and who wishes her to profit from past experience, always keeping in mind that it is now the time to settle the European question for a hundred years to come, and to take care of the probable increase of our population, to secure its livelihood and prosperity. While France has remained practically stationary in her population, the regular annual increase of the German people is about 800,000 souls.

American readers who have followed Germany's development since she became a united empire will very easily be able to check my views by comparing them with the known ambitions of my people, and drawing the necessary inferences from German popular, industrial and commercial development.

TERRITORIAL EXPANSION IN EUROPE

While there may be some minor corrections of frontiers for military purposes, by occupying such frontier territory as has proven a weak spot in the German armor, I do not consider it wise, nor, I believe, do the leading people of my country, for Germany to take any European territory. She is now holding practically all the land inhabited by the German-speaking population of the world, with the exception of the Baltic provinces of Russia. Whether these could be added to the German Empire would hinge on the question whether they could be defended. A look at the map will show that this must be very difficult. The lack of homogeneity has been a great source of trouble to all the European nations. England has had the Irish trouble (which has been a very potent factor in her going to war). The unrest in Lorraine, and that of about thirty thousand Danes in the north of Schleswig, and the now past differences with several millions of Poles, have given my country considerable trouble. Italy is restive because of a few hundred thousand Italians incorporated into Austria. The Polish question is constantly occupying the Russian mind; so is the Jewish question, which has there more a racial than a religious character. The ardent desire of the Servians to redeem their brethren in Austria has given cause to the present war. So any rearrangement of the European map that would not follow national lines pretty definitely would be only a source of constant friction hereafter. This does not say that every single German is to be returned to Germany, nor every single Frenchman to France. The position of Europe is and will remain such that the various states must look for defensive measures against their neighbors, and such strategic considerations should have a large share in any peace settlement. But as a general rule, I would not consider it wise for my country to attempt any territorial aggrandizement in Europe.

THE FUTURE OF BELGIUM

From the foregoing it would follow that Belgium would not be made a German province. As events have shown, her natural position with respect to France and England—especially as a bulwalk for the latter on the continental side of the Channel—has made Belgium a vassal of the two countries. As Sir Edward Grey says, he "expected" Belgium to fight to the last man. And fight she

did practically without help from the Allies. Belgium was so entangled with England by the various military "conversations" or arrangements, such as those evidenced by the plan of Colonel Bernardiston, that she could not accept the German Chancellor's offer of integrity, indemnity and full restoration, tendered twice—both before and after the fall of Liège. By accepting these offers, Belgium could have avoided all the misery that has since befallen her. It is her own doing that has placed her in her present plight.

Geographically, Belgium does certainly belong to the German Empire. She commands the mouth of the biggest German stream. Antwerp is most essentially a German port and the main outlet of the trade of western Germany. That Antwerp should not belong to Germany is as much an anomaly as if New Orleans and the Mississippi delta had been excluded from the Louisiana Purchase, or as if New York had remained English after the War of Independence.

These considerations will probably determine the German attitude. While no attempt is likely to be made to place Belgium within the German Empire alongside of the Kingdoms of Bavaria, of Würtemberg, and Saxony, because of her non-German population, the connection between Germany and Belgium must be strengthened by including her into the German customs union, as has been the case with Luxemburg ever since 1867; and, furthermore, the harbors of Belgium must be secured by some practical means against British or French invasion. That Belgian neutrality has been an impossibility the past has shown, and so her state of neutrality will probably be lost for all times. On the other hand, such an arrangement would give Germany an opportunity to build up Belgium again industrially, agriculturally and commercially, and Germany would probably have to engage to provide the necessary financial aid.

THE NORTH SEA AND THE CHANNEL

England has now bottled up the North Sea by its command of the British Channel. It will be necessary in future to reëstablish a *mare liberum* (a free sea). There are various means by which this could be accomplished. The English theory, that the sea is her boundary, and that all the sea is her territory down to the three-mile limit of the other powers, cannot be tolerated.

The neutralization of all the Channel coasts — English, Dutch, Belgian and French—even in times of war, must be necessarily secured, and the American and German doctrine that private property on the high seas should enjoy the same freedom from seizure as private property does on land, should be guaranteed by all the nations. The importance of such a stipulation will be readily recognized at a time like the present, when England makes commercial war upon the United States on the pretense of protecting her interests against the nations with which she is engaged in a struggle. It would become equally necessary to neutralize all cables; their cutting has hurt the United States even more than Germany.

THE COLONIES

It must be demanded, as a matter of course, that all of the colonial possessions, without exception, should be returned. But her growing population makes it absolutely imperative that Germany should also get some territory that could be populated by whites. At the present time she has no such colonies. In all the German possessions over the sea, in spite of efforts that have lasted for over thirty years, less than thirty thousand white people, including military, have been settled. So she must endeavor to get some such territory with a climate fit for her people. The Monroe Doctrine (which Germany has always recognized in letter as well as in spirit) forbids our seeking expansion on this side of the water, either in North or in South America. So we will have to turn to some such place like Morocco—if it is really fit for the purpose, which I am unable to say at this present time.

GERMANY AND TURKEY

Germany has been for about thirty-five years the associate of Turkey in developing Turkish territory, commerce and industry. She has acquired the Oriental railways and built the Anatolian and Bagdad lines. She has established harbors and shipping companies, and engaged in mining and very extensive irrigation works. She must demand to be left with a free hand to go on with this commercial development as far as she can arrange with the sovereign power of the Porte and without outside interference. This would mean a recognized sphere of influence from the Persian Gulf to the Dardanelles.

THE COMMERCE OF THE WORLD

Germany stands, and has always stood, for the "open door and equal opportunity" policy, as to China and to other countries as well as to the British colonies, and it must be strictly maintained. All such underhanded proceedings as, for instance, the Japanese have resorted to, attempting to throttle foreign commerce by the possession of the railways in Manchuria, must be done away with, and all the powers must see to it that no more parts of the earth are closed, to the exclusive advantage of any one nation. While every nation must have an undisputed right to treat foreign goods and foreign immigrants as she sees fit in her own interests, every nation must treat all other nations in a spirit of equality and without discrimination.

THE FATE OF THE SMALLER NATIONS

Of course, it is incumbent upon Germany to see that such as have helped her in her struggle shall not be left to the mercy of her antagonists. The right of the peoples to frame their own destinies must be fully recognized. If the Finnish nation, which is of non-Slavic descent, choose to join their Swedish brethren, we will have to stand up for them. If Poland has the necessary vitality, she should have a chance to show it. If the Boers want to be independent they should have that right. And if Egypt wants to return to Turkey she must be permitted to do so. All this must be done in such a way that no new dangers can arise to the dual alliance.

There is nothing in this program that would seriously change the aspect of Europe. There is no wish for world-dominion, or any unduly predominant power in western Europe incommensurate with the mass of 122,000,000 of Germans and Austrians, and there is no danger to the peace of Europe. It is simply the carrying out of the peaceful aims that Germany has had for the last forty-four years—the only nation of Europe that, even in the face of intense provocation, has never let herself be dragged into any war, or has taken by force a foot of territory against the will of the owner.

In conclusion, I will say that while I am speaking as a private person and cannot voice in any way official sentiment, I feel sure that I am at one with the best German element, and that my opinions are shared by almost everybody in my country. My country did not wish this war, has done its utmost to ward it off, and is not like England, which, on her own testimony, stands convicted of an effort to destroy an unwelcome competitor and a people whose chief sins are diligence and thrift, and who have never harmed the rest of the world. The only thing Germany stands committed to is to hold and maintain its "place in the sun."

THE AMBULANCE CORPS OF THE AMERICAN HOSPITAL AT NEUILLY

KEEPING FIGHTING MEN ALIVE

BY LOUIS LIVINGSTON SEAMAN

SPECIAL CORRESPONDENT OF THE INDEPENDENT

THE harvest moon has waned, and never was nature more lavish in the abundance of her bounty to this beautiful land than in the season just closing. The vineyards have yielded luxuriantly, the orchards are bending with fruit, and the well filled stacks mark the landscape everywhere except in the pathway of the grim monster of war. But the harvest festival, which in the early summer days was anticipated with more than usually festive thoughts, has been turned to one of sorrow. Thruout half of Europe death has been the harvester.

During the past two months I have made almost daily visits to some of the eight hundred or more military and Red Cross hospitals of Antwerp, Ghent, Dunkirk and Paris; or, from the firing line, field and base hospitals, between Soissons and Arras, Nieuport and Ostend, to the newest and most up-to-date institute at Neuilly—the Lycée Pasteur, now known as the American Hospital, where representative American surgeons are winning well deserved honors. In spite of the utter collapse of the department responsible for clearing the battlefields and transporting the wounded to base hospitals, the work of the surgeons and Red Cross nurses is highly commendable.

Many of the wounded, on admission to the base hospitals, suffer from advanced septicemia and gangrene, which makes operative procedures extremely dangerous. Roughly estimated, I should say sixty per cent of the casualties are uncomplicated, and would have healed by first intention without treatment had they received prompt first aid dressing, and a well applied bandage such as every Japanese soldier is taught to apply for himself or his comrade, on the field.

The most serious cases have resulted from neglect of this dressing, and from the long delay in transmission from the battlefield to the base, often requiring five and in many instances eight days, during which time sepsis developed. Tetanus, too, has proved a serious factor, the majority of the cases ending fatally. In a battle like that on the Aisne, it was claimed by the military commanders that every energy, at whatever cost, must be expended on the firing line, or to replace fresh troops for those who had fallen. The horrors following such a battle could be avoided only by carefully evolved organization and preparation, such as does not exist in American or European armies, but which was found in the armies of the Mikado.

But the generosity of two continents is here being given in surgical and Red Cross service to the wounded of both friend and foe. Paris has become a center where the Red Cross flag, denoting places for the reception of the wounded, is seen as often as the tri-color of France. In the little villages between Paris and the long firing line, which reaches from the borders of Switzerland to the Straits of Dover, hotels, convents, schools, public buildings and many private residences have been utilized for similar purposes.

At the single station of Obervilliers, a few miles beyond the fortifications of Paris, as many as 15,000 patients have been received in a single day and sent either to the city or to hospitals in southern France. The fear of a possible siege of Paris made the concentration of wounded there a source of danger, notwithstanding the fact that over 60,000 beds awaited their arrival. The military authorities allowed the admission of the dangerously wounded only, while the remainder were sent to distant localities. I visited Obervilliers many times. It was no unusual thing for from three to five thousand wounded to arrive daily, the majority coming between 9 p. m. and 5 a. m. Several railroads intersect there, and a large temporary reception depot, with many tents serving as annexes, has been established for the reception of the terrible stream of victims which pours in from the trains. They are met by the military surgeons and Red Cross attendants, and after examination the severely wounded are sent in convoys of motor ambulances to the military and Red Cross hospitals in

the city. The remainder, who form a large majority, are placed in cots for temporary rest, or are given warm clothing, blankets and nourishment, and entrained for other destinations. Here it is that the women of l'Union des Femmes de France, and other members of La Croix-Rouge, find their endurance severely tested. They assist in transporting the poor, limping sufferers to their cots and in dressing their wounds, and distribute hot coffee and chocolate, rich broth or bouillon, raw eggs, rice or wine where most needed. It is often the first food and drink many a poor fellow has received for two or three days. The work of these self-sacrificing women is worthy of highest commendation. They report for duty at ten in the morning and are on continuous service for twenty-four hours, twice during the week.

The military authorities claim that the necessity for removing large bodies of troops to and from the different parts of the long firing line compelled the use of all transports for that purpose, and neglect of the wounded could not be avoided. This condition has been largely relieved thru better railroad facilities, and long auxiliary trains of motor ambulances render additional assistance.

The most seriously wounded who reach Paris are taken to the American Hospital at the Lycée Pasteur. This splendid institution is named after the immortal discoverer of the microbic origin of disease. One could imagine the delight of this great savant on seeing the humane use to which the institution is being devoted. It is admirably adapted for hospital purposes, altho built for a public school, and within its walls nearly five hundred patients are now receiving every attention surgical skill and scientific nursing can suggest. It was established as a temporary annex to the American Hospital of Paris and is under the patronage of the American colony there. Its active agents are on the board of that hospital, and the Rev. W. S. Watson is chairman of its executive committee. Its staff includes such names as Dr. de Bouchet, surgeon-in-chief, Doctors Blake, White, Wooster, Maguin, Derby, Gross and others, all of whom give their services voluntarily. It is fully equipped with an operating room, apparatus for the sterilization of water by the ultra-violet ray, a department for dentistry, rooms for chemical analysis, radiography, and all other features of an up-to-date institution. Only surgical cases are admitted to its wards, and the records of the work performed during the war should form a valuable contribution to surgical literature. It also has its own complete ambulance corps and a dozen motor ambulances, donated by the manufacturers, for transporting the wounded either from the battlefields or from the reception depots at Obervilliers and Pantin.

A MOTOR FIELD AMBULANCE
This provides for six stretchers. Two of them, it will be seen, are occupied

Val de Grace is another military hospital of Paris of great importance. It was here that Larray made himself the most beloved man in the French army during the Napoleonic war a hundred years ago. It now contains about one thousand patients, among whom are some three hundred German wounded prisoners. In the large hollow court which forms the garden of the hospital can be seen picturesque groups of French Zouaves and Turcos, Sikhs, Senegalese and Moroccans, convalescing in the sunshine, and longing for the hour when they can return to the colors.

In the military hospital adjoining the Musée at Versailles I saw another thousand French wounded or invalided. This institution occupies the extensive quarters which were formerly the ancient kitchens of the chateau of Louis XIV. The Hôtel Trianon nearby has been reserved for British wounded. This beautiful establishment has been converted into an ideal hospital and equipped regardless of expense with operating rooms and other necessary fittings. It is under the supervision of the Royal Army Medical Corps, and Queen Alexandra's nurses are in attendance. Here I found my old friend Colonel Smith, D. S. O., in command. Two hundred and seventy-six of the five hundred wounded now there were received on the opening day, most of whom were the victims of Prussian shrapnel.

This war is an artillery duel and the majority of casualties result

THE LYCÉE PASTEUR—NOW TURNED HOSPITAL
The fine building at Neuilly, just outside Paris, now converted into a temporary annex to the American Hospital of Paris

from shell and shrapnel. The modern high velocity steel jacketed rifle bullet is comparatively harmless when passing thru soft tissues. It is aseptic, and I have seen many cases, both in this war and in the Japan, where two and sometimes three bullets have past completely thru the lungs without serious result. It is when the bullet strikes a bone that its effects are most dangerous. But the killing in the armies has been mainly the result of shrapnel and shell. The bullets of the one and irregular fragments of the other produce frightful contusions and lacerations and compound fractures. They carry into the wound septic material, dirt, shreds of clothing, etc., that produce infections with too often fatal results.

AN ESSENTIAL SAFEGUARD

In the American Hospital is installed the best device ever invented for the preservation of the health of an army. It is an apparatus for the sterilization of water by the use of the ultra-violet ray, which kills all bacilli and pathogenic germs as instantly as an electric shock of full voltage kills a human being. It is simple, portable and thoroly practical, and costs less than a single howitzer shell. In two of the hospitals I visited at the front, one near Soissons and the other near Arras, there were twenty-nine soldiers, among whom there was not a *wounded* man. The majority suffered from intestinal infections, typhoid and maladies resulting from the use of polluted water. The danger from this menace will inevitably increase as the season advances unless it is promptly checked, for the territory where the fighting is now in progress has been occupied by the enemy in his advance toward Paris and on his retreat over the same ground. In places it resembles a cemetery. Many of the dead—men as well as animals—have been buried in its trenches or flung into its ditches and other waterways. Many have been drowned and never buried, and its water sources are all more or less infected. The only escape from such disastrous conditions is the sterilization of water used for drinking purposes. Thoro boiling for twenty minutes, as was done by the Japanese in their campaign in Manchuria, will kill all bacilli, but this method is not possible here. The Taubes, which are constantly on the lookout on the firing line, would promptly report the smoke of a fire to their artillery corps, and trouble would follow.

It is, therefore, imperative, if disease is not to claim a large percentage of the invalidism and mortality in the campaign, that a practical method of sterilization of water should be adopted, and the ultra-violet ray offers the solution of the problem.

It has been my privilege to recommend its general adoption to General Favrier, and the French military authorities in Paris, as well as to other high officials in the armies of the Allies. Its general use will save thousands of men for the firing line who otherwise are doomed to end their days as our American boys did at Camp Alger and Chattanooga, from causes that science has demonstrated are preventable. I have seen over a thousand soldiers killed by the bacilli of cholera who, ninety-six hours before their death, were healthy fighting men, and who might have remained so had they taken the simple precaution of sterilizing their drinking water.

If a fire was discovered in a valuable building in plain view of its inmates, and buckets of water stood conveniently near by which it might be extinguished, some one with sufficient initiative to throw on the water might put out the blaze. The question here is, "Will the military authorities of the Allied armies use the bucket?"

THE EXAMPLE OF JAPAN

Thus far the armies of all the belligerents have been comparatively fortunate in escaping preventable disease, and for many reasons. In the early days of the war the majority of troops sent to the front were hardened soldiers who had been immunized against typhoid fever (or enteric, as it is called here) and smallpox. The weather, even in August, was cool, and those active carriers of disease, the mosquito and fly, were not much in evidence. But the cold is rapidly approaching, and the most dangerous bacilli are not killed by frost. What it is remembered that the mortality of armies in nearly all the wars of history has been five times greater from preventable diseases than from bullets, the necessity for using preventive measures must be self-evident. By adopting such a course, and giving to its medical officers the necessary power to enforce its execution, the Japanese completely reversed the mortality statistics in their war with Russia. In that campaign, lasting nearly two years, the total mortality was 81,000, of whom more than 60,000 died of battle casualties. In other words, instead of losing eighty per cent from disease and twenty per cent from battle casualties, they lost about thirty per cent from disease and seventy per cent on the firing line. This is the most remarkable record ever made in the annals of war. The Japanese were the first to recognize and anticipate the danger from disease. In order to prevent the invasion of that deadly foe they saw that the military surgeon must prove himself a keen sanitary engineer in the selection of camp sites, of camp drainage, of the location of latrines, in the inspection of all water supplies, the quality of the food and its cooking, of the soldiers' clothing and his personal cleanliness. He must be an epidemiologist and a bacteriologist, as well as a student of dietetics and metabolism. Terrible epidemics of typhoid fever and diarrhea have resulted from flies, which carry disease germs from unsavory places to the mess hall; or from the drinking of polluted water. The ironclad ration of the soldier has at times led to starvation or scurvy, or has proved an excitement to intestinal disease. With all these problems the military surgeon must be prepared to wrestle, especially when he is with newly recruited troops, unaccustomed to the discipline of army life, or when stationed in foreign climes.

The normal condition of the soldier is health. Disease and premature death are to a large extent unnecessary. They are to be overcome, however, not by the abrogation of the intellectual faculty, but by its exercize. With a thoro knowledge of the microbe of any disease, its prevention is comparatively easy. But it is only by the exercize of the greatest vigilance and judgment that these most pathetic tragedies of war can be averted, and that a high standard of health in an army be maintained, so that in the emergency of battle it may respond effectively.

In order to accomplish this most desirable result the Japanese have in their army 44,000 sanitary soldiers who are at the command of its medical officers, and whose duty is to save life, instead of taking it. This enormous factor in their service is practically unknown in the armies of Europe and America, but it has proved its value thru results. It illustrates the fact that the only safety for a nation lies in its thoro preparation to meet all emergencies.

London

This article will be supplemented in a forthcoming number by one describing the care of the wounded British soldiers and their behavior in the military hospitals, by Alfred Stead, The Independent's correspondent at the front.

THE "AUDACIOUS" AND "BULWARK" MYSTERIES

BY PARK BENJAMIN

THE INDEPENDENT'S NAVAL EXPERT

IT is reported that on October 27th last, H. M. S. "Audacious," a dreadnought of 23,000 tons displacement, only a year old, and, therefore, modern in every feature of construction and armament, sank at sea some twenty miles distant from the north coast of Ireland. The British Admiralty refuses any information on the subject. The German Admiralty is equally silent. The newspaper reports printed a fortnight after the event were statements of people on board the White Star steamer "Olympic," which arrived upon the scene in time to aid in rescuing the warship's crew.

There is nothing to suggest that the "Audacious" ran on a rock, or sprung any leak so uncontrollable as to prevent her reaching shoal water or a nearby harbor. The inference therefore is that such a strong and new warship could have been sunk only by either an internal or an external explosion.

Since the disaster the battleship "Bulwark" has been blown up in the Thames by what is now asserted to be the detonation or spontaneous combustion of her powder. This adds one more to the list of similar casualties. The British cruiser "Dotterel" met a like fate some years ago, the Japanese battleship "Mikasa," and the French battleships "Jena and "La Liberté" were similarly destroyed more recently, and Spain has always maintained that our "Maine" was hoist by her own petard. The silence of the British Admiralty, the official anxiety to prevent information becoming public, the muzzling of individuals and the press, the flood of misleading reports and especially the absence of exultation by the Germans all suggest that the "Audacious" sank herself. On the other hand, immediate official announcement is made of internal explosion as the most probable cause of the "Bulwark's" loss. There is, obviously, some mystery about the "Bulwark" disaster, and more about that of the "Audacious."

The great difficulty of hostile surface torpedo boats (of the presence of which there is no indication) approaching within torpedo range of a battleship is sufficient to exclude them from consideration in the case of the "Audacious." Her destruction was first ascribed to a mine, and this gained support from the warning already issued by the Admiralty to neutral vessels of mines existing on the north of Ireland to such an extent as to make navigation "within sixty miles of Tory Island" dangerous. Where such mines came from was not satisfactorily explained. The Germans officially denied having put them there. The British retorted that they must have been laid by ships flying a neutral flag—which lacks corroboration and reflects on the efficiency of the patrol. Beyond this, however, even granting the existence of a known mine field, no reason is discernible why the "Audacious" should have gone or been sent into it. If she went into supposedly free water and encountered a stray floating mine, then it is equally mysterious where that mine came from, for it is hardly conceivable that if it were one of the many which have broken adrift from the huge fields in the North Sea, it could have made its way thru the Orkneys around the north end of Scotland and then despite opposing currents have traveled south, dodging the Hebrides to the Irish coast, or if it came from the English Channel that it could have traversed the Irish Sea and the North Channel to the same locality. If Lough Swilly Bay is mined, which is negatived by the entrance of the great "Olympic," one may have escaped from there, but the probabilities are remote. In the case of the "Bulwark," the Thames at its mouth is closely mined and there were, of course, neither hostile destroyers nor mines at Sheerness.

So we come to the possibilities of submarine attack. It is asserted that not merely one submarine, but a flotilla of them mothered by the cruiser "Berlin," traversed the mine fields of the North Sea, eluded all the British blockading vessels there and so went to the north of Ireland in order to begin a career of havoc in that locality. The "Berlin" is credibly reported as having gone into Trondhjem in need of repair and as having been interned by Norway for the war. It is also announced that the German submarine "U-18" was rammed and sunk off the north coast of Scotland by a British patrol vessel; but that does not explain the presence of submarines on the north coast of Ireland, and besides, the German Admiralty officially denies the loss and says that its submarines are all afloat and accounted for.

It is not impracticable, however, for the newer German submarines to traverse the eight hundred miles between the German coast and northern Ireland, especially if they come to the surface at night and so make better speed than they can under water, while getting also the very necessary fresh air. But that a cruiser could run the gauntlet not only of mines but of the sleepless watch at the northern exit of the North Sea is beyond belief. If the "Berlin" tried to do so, the mauling which sent her into Trondhjem need not be further inquired about.

But how could a German submarine know that a particular dreadnought was at that particularly unlikely place at that particular time? The only answer is "spies," and a long and doubtful story has appeared to the effect that "spies" found out that all the British dreadnoughts were massed in Lough Swilly, and the "Audacious" was merely selected from among them while engaged in fleet "target practise."

As for the "Bulwark," it is insisted that "even a mackerel" could not get thru the mine field at the mouth of the Thames without injury; but none the less a few days ago a German submarine did pass the mines planted before Deal Harbor and destroyed a gunboat therein.

It is hardly possible to avoid contrasting the quick official ascription of the "Bulwark's" destruction to an internal explosion, with the official reticence relative to the "Audacious." Clearly in the Admiralty's opinion it is a much more troublesome thing to admit that the enemy's submarines could get up the strongly guarded Thames to within thirty-five miles of London than to leave it open to surmise that they may have traversed eight hundred miles from their base to attack the "Audacious." For if the Thames can be entered it will certainly be asked why not Roshyth or any other of the great harbors in which the British capital ships are protected? Besides, if British dreadnoughts can blow themselves up at sea, all the questions raised by the explosions on the "Jena" and "La Liberté," which took place in port, again become poignant —stability of explosives, temperature of magazines, adequacy of means for ventilating and refrigerating them, and the like. It might well seem, perhaps, more reassuring tacitly to permit the world to believe that the "Audacious" fell victim to a mine or preferably a submarine, and the "Bulwark" to an internal explosion, than to leave a reversal of the conditions open to public suspicion, or even to concede that both ships were self destroyed. A popular notion that a fleet is inefficient in so vital a

matter as the care and handling of its explosives, or that, despite all precautions, the latter are so unstable as to be a source of constant peril, is much more disquieting than any discovery of unexpected capabilities in hostile submarine attacks.

So far as the loss of the two battleships is concerned, it counts but little to a navy which can still oppose eighty of these great vessels, built and building, to the Kaiser's forty-eight. *But* if a German submarine did get to the "Bulwark," people are going to add together all the ships (1) of the British navy, (2) of the French navy, (3) of the Russian navy, (4) of the Japanese navy, and (5) of the Portuguese navy, and wonder at the tremendous and overpowering strength of the defenses of the German navy, which prevents the expenditure of some of the 250 British destroyers or the eighty-seven French destroyers or the 141 Russian destroyers, for example, or even of unimportant larger craft to detonate the mines guarding German harbors prior to the immediately succeeding entrance therein of British squadrons. Mined and fortified harbors cannot be forced without loss of life, any more than trenches can be stormed, and of the latter there is abundant daily evidence. A good many destroyers might be sacrificed before 800 men—the loss in the "Bulwark"—would be killed. Under like circumstances, Farragut remarked "Damn the torpedoes," saw the "Tecumseh" plunge to the bottom, and swept on to Mobile.

New York City

THE SOUL OF ROUGET DE LISLE

BY WILLIAM WATSON

Their arms shall conquer—to victory led
By a voice like a trumpet's peal;
For a great Ghost marches at their head—
The Soul of Rouget de Lisle.

He gave them the Song that cannot die
Till the world's heart cease to feel;
And they go into battle captain'd by
The Soul of Rouget de Lisle.

Not for the first time—not for the last—
Does an enemy waver and reel
Before the eternal clarion-blast
From the Soul of Rouget de Lisle.

For this is the Song shall break the power
That bids men grovel and kneel—
The Song that was born of a mighty hour
In the Soul of Rouget de Lisle.

And its music fires the booming gun
And edges the gleaming steel,
For the Soul of France herself is one
With the Soul of Rouget de Lisle.

TO THE SPIRIT OF BYRON

BY ROBERT UNDERWOOD JOHNSON

"THE NIOBE OF NATIONS"—*Childe Harold*

Thou more than poet, Freedom's laureate,
Byron! Altho some tyrant hand should blot
All pages that to her are consecrate
By loyal bards—thus doomed to be forgot—
Who should despair if thine were quenchéd not?
Oh, for thy voice, when the world's heart is wrung
At Honor made a barrack-jest and plot!
To what invective hadst thou given tongue!
Mourner of Rome, what dirge for Belgium hadst thou sung!

What of *her* children ravaged from her heart—
Those cities proud of lore and fair of mien:
Liège, that cradled Charlemagne; that mart
Of many seas, rich Antwerp; old Malines;
And royal Brussels seated like a queen;
Bruges the melodious, and flowery Ghent,
And wise Louvain? . . . Oh, Byron, hadst thou seen
The tears and terror, who could be content
By lesser song than thine that grief and blame be blent?

Revered is Valor—ay, but Honor more.
A score of centuries doth History save
Cæsar's "brave Belgians": for how many a score
Shall live the word these to the Teuton gave
When they must choose dishonor or the grave!
They knew, before they took Despair to wife,
Man's mind, and not his master, makes him slave.
What theme for thee, ere, Singer of Great Strife,
To Belgium thou hadst poured libation of thy life!

WINTER TRAVELS

SEVEN ALL-IN-AMERICA TOURS CONVENIENTLY OUTLINED BY BERTHA RUFFNER. THEY OFFER IN EXCHANGE FOR WINTER SNOWS OR THE CHILL GRAY DAYS OF THE CITY THE BRACING PINEY AIR OF SOUTH JERSEY OR THE CAROLINA MOUNTAINS, THE SUNNY SEASHORE, THE LAZY CHARM OF OLD CITIES OF THE SOUTH AND QUAINTER APPEAL OF SPANISH AMERICA, THE TROPICAL LUXURY OF FLORIDA, THE GOLDEN SPLENDOR OF CALIFORNIA. THE FIRST COST—RAILROAD AND STEAMSHIP FARES—IS ACCURATELY INDICATED; THE FURTHER EXPENSES ARE SUGGESTED BUT CANNOT BE SPECIFICALLY RECORDED HERE

LAKEWOOD, ATLANTIC CITY AND THE POCONOS
THRU VIRGINIA TO WASHINGTON
THE MIDDLE SOUTH

FROM PINEHURST TO NEW ORLEANS
FLORIDA AND HAVANA
JAMAICA, PANAMA AND CENTRAL AMERICA

A TRIP THRU CALIFORNIA

LAKEWOOD, ATLANTIC CITY AND THE POCONOS

Time—One Week from New York

Lakewood with its smell of pines, Atlantic City with its tang of the sea and the Pocono Mountains, so rich in natural beauty, give a diversity not often found on so short a trip. The change of climate, the variety of scenery and the difference in out-of-door life cannot fail to be stimulating, and after one short week you will return greatly refreshed in mind and with energy renewed.

Day

1 *Lv. New York* in the morning or afternoon.

Ar. Lakewood in about two hours. Hotels $2.50 and up day A. P. This is one of the nearest of the noted resorts to New York and has much to recommend it—its location in the famous "pine belt" of New Jersey nine miles from the ocean; its climate, which is dry; its walks, drives, unexcelled facilities for golf, tennis and riding, and in season, for winter sports. If you are interested in poultry, you will enjoy the drive to the model poultry plant at Laurelton Farm, four miles, or you may prefer to drive to Allaire (the Deserted Village) eight miles away. By automobile you may visit Princeton University (thirty-five miles), the Battlefield of Monmouth (sixteen miles) or the Atlantic Coast resorts from ten to twenty miles away. For golf, at the Country Club there is a fine 18-hole course well laid out and full of natural hazards. Indoors you will find bowling alleys and squash courts. On the lake there is rowing and canoeing. In midwinter the sleighing, skating and iceboating are fine. In the evening attend one of the fine concerts given at the various hotels and to which all are welcome.

3 *Lv. Lakewood* in the morning and

Ar. Atlantic City in about three hours. Hotels from $2.50 up a day A. P. The "Playground of the World" is one of the most interesting cities in America, as well as one of the greatest health and pleasure resorts in the world. It is situated on an island ten miles long and less than a mile wide. This location, combined with the nearness of the Gulf Stream and the protecting pine belt on the mainland, gives it an ideal climate, several degrees warmer than that of the nearby cities. Its most distinctive feature is the Boardwalk, extending for eight miles along the beach. The ocean piers, of which there are six, will contribute to your pleasure, with their sun parlors and their concerts. If you prefer you may spend your time in bowling alleys or skating rinks. The Country Club furnishes golf over a course of eighteen holes. Driving and automobiling may also be had as well as delightful trips by trolley, both on the island and on the mainland.

5 *Lv. Atlantic City* in the morning for Philadelphia, changing cars there and

Ar. Buck Hill Falls in about three hours. Here, at an elevation of from 1350 to 1700 feet, you will find neither a village nor a city, but you will be in the midst of mountains with forests all around you and beautiful glens and many waterfalls. You will lead a simple life in the heart of nature. The air being dry and invigorating will make walking over the many trails a delight. Snow, too, is abundant here and light and dry, and you will be able to indulge in sleighing, snowshoeing, coasting, skiing, tobogganing and skating; in fact, the time to be spent here will be all too short.

7 *Lv. Buck Hill Falls* in the afternoon and

Ar. New York in about three hours.

Fare from New York to New York, $9.90

THRU VIRGINIA TO WASHINGTON

Time—Two Weeks from New York

Who has not a desire to visit Virginia, the state famous since the very beginning of American history, the home of many Presidents, the scenes of battles on land and sea, the state of natural wonders, glorious mountains, springs, health and pleasure resorts second to none in the country, and Washington—the city of national dignity and constantly increasing beauty?

1 *Lv. New York* in the evening.

2 *Ar. Natural Bridge* in the afternoon. Hotels $3 up day A. P. This resort is located on one of the peaks of the Blue Ridge Mountains. The bridge, the glens, the springs, the lake, and the hunting make it attractive alike to the tourist, the artist or the sportsman.

3 Spend the morning going over and under the wonderful bridge, which is 215 feet high, 100 feet wide, with a span of ninety feet. It connects two of the five round-top mountains and overlooks the James River Valley. In the afternoon walk for a mile thru the glen above the bridge to Lace Waterfalls, where Cedar Creek leaps a great distance from the upper level.

4 *Lv. Natural Bridge* in the morning, changing cars at Clifton Forge,

Ar. White Sulphur Springs about noon. Hotels $4 up day A. P. The oldest spa in the United States. The names of many famous men and women of the early days are to be found on the old register. It is older than Newport or Saratoga, and still maintains its popularity. The location on a slope of the Greenbrier Mountains is ideal. It is at an altitude of about 2000 feet and, being protected by mountain peaks, has an equable climate.

5 Spend the day either walking thru the natural park about the spring or driving along the broad highways which lead up the mountains thru beautiful scenery. You may play golf or tennis if you prefer, or have a swim indoors in the large sunlighted swimming pool. The bathing establishment is fully equipped and you may have a European cure without going to Europe.

6 *Lv. White Sulphur Springs* in the morning.

Ar. Hot Springs in about three hours. Hotels $3 up A. P. No one attraction makes this delightful resort, situated among the mountains at an altitude of 2500 feet above sea level, famous, but the many sports and pastimes offered. It has a fine climate and the waters are beneficial both for bathing and drinking. It has been a well-known health resort since George Washington's time and the first hotel was built ten years before the Declaration of Independence was signed.

7 Drive to Fassifern Farm, an old Virginia farmhouse about ten miles out, and enjoy a real Virginia luncheon, or drive to Oak Grove, an old Colonial mansion that has much of interest in it. Here delicate southern dishes are served. If you prefer walking, it is only a little over a mile to the Daniel Boone log cabin. There are many bridle paths, a picturesque golf course and fine tennis courts.

8 *Lv. Hot Springs* in the morning.

Ar. Richmond in the afternoon. Hotels $1 up day E. P. Richmond is the capital of old Virginia, a city full of historical attractions. Spend the one day here driving about the city with its many interesting monuments and homes of noted people. Visit Hollywood Cemetery, where so many of these people are buried. Go to the Capitol, where from the dome you will get a fine birdseye view of the city.

10 *Lv. Richmond* about noon.

Ar. Old Point Comfort in the afternoon. Hotels $2.50 to $5 per day A. P. This historic point was christened by Captain John Smith more than 300 years ago.

11 Visit Fortress Monroe in the morning, going to Guard Mount. When that is over, take a walk around the rampart for a fine view over Hampton Roads. Later go to Newport News by trolley (about fifty minutes) and visit the great shipyard. On the return journey stop at Hampton and spend a pleasant hour at Hampton Institute. If time permits visit the Soldiers' Home, which you pass en route. The Nauheim Baths, the Aix or Vichy treatments, inaccessible in Europe, can be had here at "The Cure."

11 *Lv. Old Point Comfort* in the evening by steamer.

12 *Ar. Washington* in the morning. Hotels from $1.50 up day, E. P. Visit the Capitol and the Congressional Library just east of it. Then go via electric car to the White House, the Treasury Building, State, War and Navy Buildings (in the latter the one special point of interest is the model room and museum). The Agricultural Building is near by.

13 The day may be given to the Corcoran Art Gallery, the Smithsonian Institute, the National Museum and Art Gallery and later the Washington Monument, from

which you will get a superb view of the city and surrounding country.

14 Visit Mt. Vernon going either via trolley or steamer. To this historic spot the home of General Washington, the trip by steamer down the Potomac is especially delightful. If time permits, visit the quaint old town of Alexandria, six miles south—one of the battlefields. The chief point of interest there is Christ Church, which Washington and his family attended. Fort Myer is interesting as well as the National Cemetery at Arlington.

15 *Lv. Washington* in the afternoon.
Ar. New York in the evening.

Fare from New York to New York, $30.35

THE MIDDLE SOUTH

Time—Two to Three Weeks from New York

The attractive cities of the Middle South—South Carolina and Georgia—are interesting alike to the person in search of health, to the tourist who likes to browse amid old things, to the traveler who simply wants a good time mid pleasant surroundings, and to one who seeks all kinds of out-of-door sports.

Day

1 *Lv. New York* in the evening.

2 *Ar. Camden* in the evening. Hotels $4 up day A. P. Boarding houses $2 up day A. P. This is an ideal resort because of its wonderful climate. The air is dry, soft and balmy, yet always invigorating. Its age—it was settled in 1750—gives it historic interest, its superb old trees are a delight and it offers variety of amusements. It is noted for its old gardens, considered the finest of their kind in the United States. Many of the old homes are still in possession of the families to whom the original grants were given by the British Crown. It was an important military post during the Revolutionary War. Many relics of the Battle of Camden and the Battle of Hobkirk are to be found, as well as quaint monuments. There are splendid golf links and tennis courts, excellent polo grounds. The hunting and fishing is good. The roads, which run thru miles of pine forests, are excellent for either driving or horseback riding.

5 *Lv. Camden* in the morning.
Ar. Columbia at noon, connecting there by train, which
Ar. Augusta in the evening. Hotels $2.50 to $5 up day A. P. A beautiful city on the Savannah River in the pine belt, which gives it a dry, invigorating climate. It is famed for its shaded avenues and wide streets. Several days may be spent here by the traveler who loves golf. The Country Club on Summerville Heights has two 18-hole golf courses and one of nine holes. Horseback riding is popular and the nearby country affords excellent shooting for quail, woodcock and snipe.

Aiken. Spend one day in Aiken, only eighteen miles from Augusta, which is reached by trolley, a pleasant trip. It is a quaint and quiet southern town, with wide streets, having parks thru the center where the magnolia, Spanish bayonet and evergreens flourish. Its groves of tall pines, almost encircling the town, add to its charm, and the many beautiful modern homes attest to the healthfulness of its climate.

9 *Lv. Augusta* in the afternoon.
Ar. Summerville in the evening. Hotels $3 to $5 per day, A. P. Boarding houses, $1.50 up A. P. This attractive resort is located at the junction of the Ashley and Cooper Rivers in the heart of the longleaf pine region, twenty-two miles from Charleston. It is an old-fashioned, charming, lazy southern town, delightfully unprogressive.

10 Visit the Tea Gardens, adjacent to the large hotel, where the first tea was planted in America. The process of gathering tea-leaf is performed most satisfactorily by colored children. Interested visitors are invited as well to the talks on tea given every Wednesday morning at 11 o'clock.

11 Drive to Dorchester with its old Indian Fort and Parish Church, established in 1717. Enough of the remains stand to mark the spot where Christianity had its early foothold in the soil of Carolina. Drive along the banks of the Ashley with its fine old residences and gardens of far-famed magnolias. Beside the rare old trees and shrubs are forests of camelias of every variety. The Middleton Place is noted for its lawns and stately terraces. Here you will see the tomb of Arthur Middleton, one of the signers of the Declaration of Independence. Visit Goose Creek Church, built in 1711; Drayton Hall, a spacious brick residence built in 1740, the headquarters of Cornwallis in 1780.

12 Four miles from Summerville is the old White Church built in 1696, the oldest of its order in the state. It is now a mass of picturesque ruins. Besides driving or playing golf and tennis, one can secure horses suitable for riding, as well as hunting horses and dogs of all kinds. There is a fine hunting preserve containing 1800 acres well stocked with deer, quail and other game.

13 *Lv. Summerville* in the afternoon and in an hour
Ar. Charleston. Hotels from $1.50 day up E. P., to $3 up A. P. The most fascinating city of the South, peculiarly interesting because it is so closely associated with Colonial times.

14 Go to the world-famed East Battery Promenade, which will give you a view of the harbor and Forts Sumter and Moultrie. Visit the old churches, among them St. Philip's Church, the first Episcopal church in South Carolina, with its old cemetery in which John C. Calhoun is buried; St. Michael's Church, built in 1752, with its famous bells and clock imported from England in 1764; the Huguenot Church, founded by French Huguenots which still adheres to the exact forms of Huguenot worship. Walk down the old streets in the exclusive residential section to see the beautiful gateways.

15 Go to see the old Powder Magazine, a relic of Continental days; the Slave Market, a relic of slavery days; and the old Charleston Market, the hall of which is now used as a Confederate Museum. Many trolley trips may be taken, all covered in an hour. The Meeting street cars to the Country Club; Navy Yard cars to that point; King street cars to Hampton Park, where the Exposition was held in 1901-02; Broad street cars to ferry wharf connecting for trip thru the harbor to the Isle of Palms.

16 *Lv. Charleston* in the evening via rail.
17 *Ar. New York* in the evening.
or
16 *Lv. Charleston* 10 a. m. via steamer.
18 *Ar. New York* second day.

Fare from New York to Charleston and return trip by rail, $43.30

Fare from New York to Charleston and return trip by steamer (including meals and berth on steamer), $43.40

FROM PINEHURST TO NEW ORLEANS

Time—Three Weeks from New York or Chicago

"Land of the Sky"—this appropriate name has been given to the mountain region of western North Carolina. At all times one may drive over picturesque mountain roads or wander along trails thru beautiful woods. The climate is unsurpassed for its health-giving properties. The mountains of Carolina and Tennessee, the wealth of memories of Confederate days which cling to Chattanooga, and the indescribable charm of New Orleans, on which novelists and painters have lavished their efforts, make this a tour of continual delight.

Day

1 *Lv. New York* in the afternoon.

2 *Ar. Pinehurst* in the evening. Hotels $2.50 to $5 up per day A. P. Pinehurst is one of the leading health and recreation resorts of the Middle South, its location in the longleaf pine belt giving it a dry, invigorating atmosphere. There are four hotels and about fifty cottages, forming an interesting colony. There are about 250 miles of good, hard, smooth roads excellent for automobiles and driving. The chief attraction is golf, the links being among the finest in the country. Tennis is popular and many tournaments are held during the season. For the hunter there is quail shooting and fox hunting. Woodcock and wild turkey are often obtained in a day's outing.

5 *Lv. Pinehurst* in the morning.
Ar. Columbia in four hours and connect with train.
Ar. Asheville in the evening. Hotels from $2 to $6 per day A. P. Asheville, the largest of the resorts in this section, stands on a commanding site surrounded by mountains, at an elevation of about 2200 feet above sea level.

6 Drive to the summit of Sunset Mountain over a fine road, curving and twisting around the mountain, the view extending miles in every direction. In the afternoon go about the city via trolley.

7 Drive to Biltmore, the home of the late George W. Vanderbilt. Three days of the week, Tuesday, Thursday and Saturday, visitors are given the privilege of driving over this magnificent estate.

8 Delightful foot and horseback trails may be taken for mountain climbing.

9 *Lv. Asheville* at noon.
Ar. Chattanooga in the evening. Hotels $1.50 up per day E. P. Scenically and historically one of the most interesting cities on this continent. The United States Government has spent large sums of money in the construction of miles of perfect boulevards. There are also ninety-six miles of electric trolleys.

11 Visit Lookout Mountain. Trolley to the foot of the mountain, connecting there with the incline road, reaching the summit in a few minutes, or take the new line, which affords continuous passage over eight miles of fine scenic road. Lookout Mountain rises to a hight of 1491 feet above the city and from the summit on a clear day one can look into seven states.

12 Visit Chickamauga Park, via trolley, and see the battlefields. Congress has spent millions of dollars for the erection of monuments and the improvement of the

walks, driveways and grounds. The old roads used by the soldiers of both armies have been reopened and the battlefield is now in the same condition as at the time of the war. Fort Oglethorpe near by will also prove interesting.

13 Drive along the Crest Road on Missionary Ridge. Visit Signal Mountain, another historic point, by trolley or by automobile. The road to the summit is as fine as any in the country and the views superb.

14 *Lv. Chattanooga* in the evening.

15 *Ar. New Orleans* in the morning. Hotels $1.50 up a day E. P. One of the quaintest, most picturesque and cosmopolitan cities of the South, having attributes both of the Old and the New World. Canal street, which is very wide, separates the American from the old French Quarter. The first day see the city, taking the trip via the St. Charles Belt Line car. This starts and returns to Canal street and will give you a good idea of the best residential section in the American portion of the city. Audubon Park you may wish to visit later. On the return take the Esplanade Belt car and get the same idea of the French residential section. Another interesting trip will be by the North Peters car to the Jackson Barracks, then walking along the levees and getting a view of the broad and winding Mississippi, whose shores are above the level of the city. In the evening dine at one of the many famous restaurants.

16 Visit the French Quarter, going in the sight-seeing auto at 10 a. m., cost $1. In the afternoon take the sight-seeing steamer for a trip on the Mississippi River, cost $1. The docks, the freight and passenger boats from Central and South America, the views of the city and outlying districts, the old plantation homes—all make the trip delightful.

17 *Lv. New Orleans* in the evening by rail.

19 *Ar. New York* in the afternoon.

or

17 *Lv. New Orleans* at 10 a. m. via steamer.

21 *Ar. New York* in the morning.

Fare from New York to New Orleans, and return trip by rail direct, $74.17; returning by water, $83.52

Fare from Chicago to New Orleans, and return trip by rail direct, $71.24

FLORIDA AND HAVANA

Time—Five to Six Weeks from New York or Chicago

Florida! The very name suggests all that is delightful to the traveler, whether he is in search of health, pleasure, something old or something new. No state in the Union is quite like it. It has a charm distinctly its own. It has a florid past and a luxurious present. Here we find tropical foliage, Italian skies, Spanish architecture and a wonderful railroad bridging the most remarkable chain of islands in the world. The shores of these keys are bathed by summer seas and fringed by graceful waving palms. It is a paradise for the fisherman and hunter, there is boating and bathing and driving; in fact, one can find places to suit all wants and all tastes.

Day

1 *Lv. New York or Chicago* in the afternoon by train.

2 *Ar. Jacksonville* in the afternoon. Hotels $1.50 up per day.

3 E. P. Take a trip by auto to Atlantic Beach, the summer resort of the state. The road is good and much of it leads thru pine forests.

4 *Lv. Jacksonville* in the morning and in a couple of hours *Ar. Magnolia Springs.* Hotel $4 up per day; boarding house $2 up per day, A. P. This is one of the charming resorts of the state, located on the banks of the St. John River in the midst of a park of over 200 acres of live oaks, pines and the fragrant magnolia trees. A restful spot where fishing, boating, tennis and golf may be indulged in. The golf links are among the finest in the state.

5 Drive or walk to Green Cove Springs four miles distant and see the wonderful spring with its perfectly appointed swimming pool.

6 *Lv. Magnolia Springs* in the morning.
Ar. Florence Villa in the late afternoon. Florence Villa Hotel $5 up per day, A. P. This attractive Plantation Home is built in an orange grove on a high plateau, and overlooks a chain of beautiful lakes.

9 *Lv. Florence Villa* in the morning.
Ar. Fort Myers in the late afternoon. Hotels from $1.50 up per day A. P. This is the most tropical town in Florida. It is located on the Caloosahatchee River eighteen miles from its mouth. Trips may be taken to islands down the river. A steamer also makes the trip to the East Coast, going thru the Everglades.

12 *Lv. Fort Myers* in the morning.
Ar. Tampa in the afternoon. Hotels $2 up per day A. P. Tampa is a progressive city and a center from which delightful excursions may be made to nearby points of interest.

13 Trip by steamer to *St. Petersburg*, leaving Tampa in the morning and arriving there in a couple of hours. St. Petersburg is one of Florida's most popular resorts, especially liked by the people of the great Middle West. On reaching the city change from steamer to trolley, going across town to Gulfport, thence by launch to Pass-a-Grille, a beautiful shell island between Bay and Gulf. You will have time for a stone-crab dinner for which the place is noted, and a dip in the Gulf before time for the return journey. It is only an hour's ride by trolley and launch from St. Petersburg to Pass-a-Grille.

14 *Lv. Port Tampa* Sundays or Thursdays (twice a week).

16 *Ar. Havana.* Hotels $2 up E. P., $5 up A. P. This is without exception one of the most attractive and fascinating cities in America. Full of historic interest and charming because, being typically Spanish, it differs in every way from any of the cities in the United States. Electric cars or victorias will take you to most of the points of interest.

Visit Colon Cemetery in the morning and in the afternoon go by trolley to Marianas, Camp Columbia, where the American soldiers were quartered during the Spanish war. It has an ideal location overlooking the Gulf of Mexico.

Between the hours of five and six drive thru the Prado and out along the Malecon (sea wall) with picturesque Morro Castle opposite. It is the time when all Havana is out. Three evenings a week the famous Municipal Band of Havana gives concerts at the Malecon.

Take a day for various trolley rides, not omitting the Vedado, a suburb of Havana. Here are the residences of the wealthy people of the city, with attractive homes surrounded by beautiful tropical gardens. The Cathedral, built by the Jesuits in 1704, and other churches are interesting as well as the public buildings.

18 *Matanzas.* Spend one day in the beautiful city of Matanzas. Trains leave at 8:15 in the morning, returning at 5:30 in the evening. Fare for the entire trip is $8.50. This includes luncheon at Matanzas, coach ride to Monserrate overlooking the Yumuri Valley, drives about the city, along the promenade skirting the bay, and admission to the celebrated Caves of Bellamar. These excursions are in charge of an English-speaking guide and lecturer. Or go independently and reduce cost.

19 *Lv. Havana* via steamer (daily except Sunday) at 10 a. m. *Ar. Key West* at 6:30 p. m., connecting directly with train over the keys.

Ar. Long Key 9:58 p. m. *Long Key Fishing Camp*, $3 up per day A. P. This is one of the most attractive places on the East Coast. A typical fishing camp, comfortable, neat, but not luxurious. It has an ideal location in a grove of coconut palms facing a fine beach and overlooking the broad Atlantic. Large seagoing vessels are constantly in sight, sailing close to shore to avoid the Gulf Stream, only a short distance out.

21 *Lv. Long Key* in the evening.

22 *Ar. Miami* in the morning. Hotels from $2 up day A. P. A perfect winter climate, beautiful scenery, good hotels and a wideawake town all help to make this one of the most popular towns on this coast. Golf and tennis may be indulged in, but the chief attraction is the fishing. It is the home of the game kingfish, the Spanish mackerel and many other favorites. During the season the great tarpon is also found here. Biscayne Bay and the Miami River afford excellent yachting and boating. Drive to Coconut Grove, where many from the North have winter homes, among them the author, Kirk Monroe, and in this vicinity are laid the scenes of some of his stories. A trip up the Miami River and into the Everglades is a delight on account of the tropical foliage along the banks.

24 *Lv. Miami* in the afternoon.
Ar. Palm Beach in about three hours. Hotels $2.50 to $6 up day A. P. The great variety of tropical plants, its location with beautiful Lake Worth on one side and the ocean on the other give Palm Beach a charm found nowhere else. The many improvements made have greatly enhanced its beauty. One can enjoy surf bathing at any time. Spend a day riding in a wheel chair over charming trails and paths thru the jungle bordering on Lake Worth. A boat trip to and a meal on the houseboat located at the inlet to Lake Worth will please. Golf, tennis, boating, fishing all may be enjoyed.

27 *Lv. Palm Beach* in the morning.
Ar. Daytona in the afternoon. Hotels from $1.50 to $5 up day A. P. It is a town of cottages situated on the west bank of the Halifax River. It has wide beautiful streets shaded with moss-draped oaks and bordered with towering pines and stately palmettos. Attractions here are boating on the Halifax River, hunting, many miles of beautiful drives and a bustling attractive town. One of the most picturesque drives is the one to New Smyrna, the site of the early English settlements in Florida, with its ruins of ancient sugar mills.

Seabreeze. This attractive resort is located on the peninsula opposite Daytona between the Halifax River and the ocean. Many of its hotels are directly on the famous Daytona Beach and therefore especially pleasing to the

have all water sports. It is connected with Daytona by bridges. Here one may drive or teach or enjoy the many drives on the motor-road, play golf, indulge in ocean bathing, sailing of all kinds and duck hunting in the various rivers.

30 *Lv. Daytona* in the morning.

Ar. Ormond in about fifteen minutes. Hotels $3 to $5 up day A. P. Boarding house $2 to $3 up day A. P. Ormond Village is on the west bank of the Halifax, as is Daytona. Ormond Beach is across the bridge on the peninsula between the river and the ocean, this peninsula being one half mile in width. This gives a choice of location. Ormond is one of the most picturesque of the East Coast resorts, in fact has an atmosphere particularly its own, owing no doubt to the fact that the two men who made the resort possible were lovers of nature and did much in the way of building roads and trails. It is noted for its attractive drives, one of the favorites being along the hard, smooth beach to Daytona, eight miles. This beach is world-famous, owing to the many automobile races held there a few years ago.

32 *Tomoka.* Spend a day on the trip up the Tomoka River. The first part of the journey is along the Halifax. Later the Tomoka is reached, and from there on the journey is fascinating. The stream is narrow, almost like a canal, with very clear water, casting wonderful reflections. The great oaks with the moss hanging from the branches almost meet overhead, the stately palms, giant ferns and groves of palmettos add much to the beauty and weirdness of the scene; alligators are often seen sunning themselves on floating logs. Drive to one of the many beautiful orange groves in the vicinity, also to the Causeway, which takes you thru wild hammock to the Causeway. The golf course is one of the finest in the country, having an ideal location along the beach, and resembling with its sand dunes the courses of Ireland and Scotland.

33 *Lv. Ormond* in the morning.

Ar. St. Augustine in about 2½ hours. Hotels $1.50 to $6 up day A. P. This is America's oldest city, having been founded and settled by the Spaniards in 1565. Spend the afternoon in wandering about the city, visiting the old Slave Market, the old gates, now within city limits, going as far as Fort Marion and the old sea wall. Visit Anastasia Beach, reached by trolley or by driving thru beautiful wooded country, also by small power boats. There are two golf courses here, both well kept.

35 *Lv. St. Augustine* at noon.

36 *Ar. New York* next evening.

or

35 *Lv. St. Augustine* noon and

Ar. Jacksonville in an hour.

Lv. Jacksonville by steamer 2 p. m.

38 *Ar. New York* third day.

Fare from New York to New York all rail, $94.75
Fare from New York to New York, returning from Jacksonville by steamer, $104.40
From Chicago via Jacksonville to Chicago all rail, $100.35
(Meals and stateroom berth on board ship included in all these rates.)

JAMAICA, PANAMA AND CENTRAL AMERICA

Time—About One Month from New York

Jamaica, the island of mountains and valleys and streams, luxuriant and wonderful vegetation, tropical flowers that bloom at all seasons, mild and uniform climate, quaint and historic cities, attractive coast and inland resorts, excellent roads. Panama, precious for its memories of centuries of bold exploration and insolent exploits, and crowned with an achievement of present day science that for romance and daring surpasses even the legends of the Spanish Main. Costa Rica, with its tropical foliage, great banana and coffee plantations, mountains, valleys and streams, forming a wonderful panorama. The people are quiet, industrious and homeloving, and their little country restfully quiet.

Day

1 *Lv. New York* at noon on Wednesday via steamer.

5 *Ar. Kingston* in the morning. Hotels $2.50 to $5 up day A. P. Boarding houses $2 up day A. P. This is the capital of the Island and is an attractive city with its broad white streets and large shade trees. The natives, the East Indians, Chinese and Syrians make a scene novel to the American traveler. Visit Jamaica Institute Museum, the Victoria Market and the shops, where choice linens, lace, Jippi Jappa (Jamaica Panamas) hats and unique souvenirs may be found.

6 Visit Constant Spring, six miles from Kingston. Trolleys leave the city every twenty minutes. This resort lies at the foot of Blue Mountain, 600 feet above sea level. From all sides views of the mountains are obtained, while from the tower the harbor is to be seen.

7 Go via trolley to Hope Gardens, about 5½ miles from Kingston. All kinds of tropical plants, trees and flowers are there at their best. Among the most interesting is a large collection of orchids.

8 *Lv. Kingston* in the morning.

Ar. Spanish Town in about three-quarters of an hour. This is the ancient capital built by the Spanish, who first colonized the Island. The few hours spent here looking over its old public buildings, scarcely used, its cathedrals, its narrow streets and low wooden houses, will surely repay.

Lv. Spanish Town at 2:51 p. m. for Port Antonio. The train climbs around and over the mountains, over great bridges, thru tunnels, over precipices.

Ar. Port Antonio about 6:30 p. m. Hotels $2.50 to $5 up day, A. P. This interesting city is located on a point of land extending into the Bay and dividing it into two harbors.

9 Spend one day roaming over the picturesque and quaint town, and in the afternoon drive to Blue Hole, four miles over a magnificent road skirting the shore most of the way. The "Hole" is a small cove almost surrounded by land.

10 Drive to Moore Town, the home of the once outlawed Maroons (Spanish slaves who escaped to the hills), over roads unexcelled even in the United States, thru luxuriant tropical foliage, groves of bamboo, mango and pimento trees alternating with fields of bananas, sugar cane and coffee.

11 Take the "Rafting Trip" down the beautiful Rio Grande for ten miles on raft made of bamboo. The return is made by carriage. Golf, tennis, boating and fishing may be had if time permits.

12 *Lv. Port Antonio* in the morning.

Ar. Kingston about noon.

Lv. Kingston via steamer at 5 p. m.

14 *Ar. Colon* in the morning. (*Wednesday.*) Hotels $3 to $5 per day A. P. A typical Central American city, with its streets and houses differing greatly from those of its next-door neighbor, Cristobal, the bustling American town where the Government buildings are located, as well as the homes of the employees. The climate during the winter season, in fact during nine months of the year, is ideal. A couple of days may be spent here very pleasantly. Visit at Colon Beach the Hotel Washington, located on a commanding site overlooking the harbor, the Hospital with its fine grounds, Columbus Monument and the Avenue of Palms at Cristobal.

16 *Lv. Colon* in the afternoon.

Ar. Panama in a couple of hours. Hotels from $3 to $5 per day A. P. The trip is interesting because the railroad parallels the Canal and the entire workings can be seen.

Panama is the most important and interesting city on the Isthmus. It has a cosmopolitan population, a history going back four centuries, quaint houses, narrow streets and old ruins mingled with houses of modern construction and well-paved avenues.

The location is picturesque, on a peninsula extending into the Pacific backed by Ancon Hill. Drive up Ancon Hill, on the slopes of which are the beautiful grounds and buildings of Ancon Hospital. Visit the cathedrals, the old churches, some in ruins, among them the famous Flat Arch church built over 200 years ago. It is a monument to the architects of those days. Walk along the old sea wall and fortress. The market place, the Chinese shops, the Panama hat stores and all kinds of curio stores make shopping an attraction.

Take a carriage ride to Balboa, the Pacific terminus of the Canal. You will be interested in inspecting the docks and buildings. Go via the northern slope of Ancon Hill, where you will get a fine view of the route of the Canal in the direction of Miraflores, Pedro Miguel Locks and Culebra Cut. On the return, visit the native and Chinese cemeteries, which are unique and worth seeing.

Spend one day visiting Old Panama City, destroyed, so the story goes, by the buccaneer Morgan in 1671. The ruins are still well preserved. En route one passes thru and over the "Savannahs," an open rolling country along the sea, the summer home of many of the wealthy Panamanians. A launch ride out thru the bay and around the islands and up to Balboa will give you a good idea of the Pacific approach to the Canal and the harbor of the city. Take a trip by water to Saboga Island, famous for its wonderful pineapples and its attractive sanitarium for convalescing invalid employees of the Canal. Visit the schools and colleges. In the evening the band concerts at the Plaza in front of the Hotel Central are well worth attending.

19 *Lv. Panama* in the morning.

Ar. Colon at noon.

Lv. Colon at 5 p. m. via steamer.

21 *Ar. Port Limon* in the morning. You have time here while waiting for your train for a walk thru the Park, which is near the railroad station, going as far as the sea wall. The plants, trees and shrubs grow to a great size, the flowers are many and brilliant and the entire Park is beautiful beyond words.

21 *Lv. Port Limon* at 10 a. m. (*Wednesday*). It is a steady climb to San José, a distance of 103 miles to an elevation of 4000 feet, passing thru dense forests of hard wood, thru the heart of great banana plantations, over wonderful bridges.

21 *Ar. San José* in the afternoon. Hotels $5 per day A. P. Boarding houses (which are preferable), $2 up day A. P. This city is progressive, having electric cars, and shop windows in which to display goods, differing in that respect from both Colon and Panama. As time here is short for all there is to be seen, take a drive around the city on arrival.

22 Visit the public buildings, cathedrals and parks, which are a feature of all Central American cities, chief among them the Opera House. As you walk about the city you will be interested in the quaint one-story houses, the narrow streets and the many curious wagons and oxcarts. You have time for a short, pleasant ride on the electric cars to the suburbs, passing the Country Club, where golf and tennis are indulged in. From there, too, you will get a fine view of the mountains which surround the city. In the evening attend the band concert on the Plaza. The band-stand is brilliant with lights and the people of the city are all there.

25 (*Sunday*) *Lv. San José* in the morning. *Ar. Port Limon* in the afternoon and *Lv. Port Limon* at 4 p. m. via steamer.

26 *Ar. Colon*, staying only a few hours, and *Lv. Colon* at 2 p. m. via steamer.

29 *Ar. Havana* 2 p. m.

30 *Lv. Havana* at 2 p. m. via steamer. *Ar. New York* Monday.

Fare, round trip, by steamer and rail, $185.12. From New York to Colon the fare includes meals and berth. These are additional elsewhere.

A TRIP THRU CALIFORNIA

(Choice of Route Going)

Time—About Two Months from New York or Chicago

California, "The Land of Heart's Desire," as a writer aptly terms it, is indeed a land where there is no difficulty in finding work or pleasure to suit all needs and wants. A climate unrivaled even on Europe's Mediterranean shores. Fruitful and beautiful valleys, wonderful trees, the largest in the world, and we are told, the oldest things in the world. Mountains everywhere and fine harbors. Romance and history in the old missions, the first of which was founded by Father Junipero Serra in July, 1769. There were twenty-one of these, a day's journey apart along the great highway called El Camino Real—the Royal Road. The ancient trail, as well as many of the missions, has been restored and nowhere can a more delightful trip be found than that over its historic 700 miles.

First Route

Day

1 *Lv. New York* at noon Saturday by steamer.

5 *Ar. New Orleans* in the morning. *Lv. New Orleans* in the morning.

6 *Ar. San Antonio, Texas*, in the morning. Hotels $1.50 up E. P. A city of mild climate, very popular with the tourist. There are fine hot mineral baths near the city. A day spent here will make a pleasant break in the journey and give you an opportunity to visit the Alamo, made famous during the war with Mexico, and to drive to the ruined mission in the suburbs.

MR. H. G. WELLS'S NEW NOVEL

The Wife of Sir Isaac Harman By H. G. Wells

Author of "The Passionate Friends," "Marriage," Etc.

"Mr. Wells is supremely the modern novelist. . . . He is not merely abreast of the times. . . . He has repeatedly shown himself uncannily able to keep in advance of the crest of wave. A writer of brilliant parts, his latest novel is filled with wisdom and scintillates with wit. Sir Isaac, as a man, has in him the red blood of a vital character in fiction." *$1.50*

are very hard to select. Why waste time and energy trying to choose suitable presents for your friends. Make your list of names and addresses; send us your check and we will mail copies of THE INDEPENDENT every week during the coming year.

We will start the subscriptions with our special Christmas number. An attractive Christmas card, bearing your name as giver, will also be mailed to reach each of these friends on Christmas day.

The Independent

6 *Lv. San Antonio* in the evening.

Tucson, Arizona, within a day's run of Riverside, will repay a stop-over. The city and the mission nine miles away have a recorded history of 214 years and in all that time religious services have never ceased. Here is the University of Arizona and a Desert Laboratory. The city is a comfortable one set in view of great mountains. (This stop is not included in the schedule of days.)

8 *Ar. Riverside, California*, in the afternoon. Hotels $3 up day A. P.

Second Route

1 *Lv. New York* in the afternoon.

2 *Lv. Chicago* in the evening.

5 *Ar. Grand Canyon, Arizona*, in the morning. This tremendous chasm has a depth of 6000 feet and a width of thirteen miles. It must be seen, it cannot be described, but there is nothing else half so stupendous or magnificent in the world. Here you have a choice of hotels or camp. Rates at hotel $4 up day A. P.; at camp $1 per day E. P., meals *à la carte*. They are both on the rim of the Canyon near each other, and both have the same beautiful views. Drive over the Hermit Rim Road, a beautiful roadway nine miles long. The cost is $3 per person. The coaches leave at 9:30 in the morning. This will give you a view of the Canyon and its wonders from many different points.

If you desire an exciting and fascinating journey, go on horseback to the bottom of the Canyon via Bright Angel Trail, leaving at 8:30 a. m and returning at 5:30 p. m. The trip to the river will cost $5 each for three or more people. If there are fewer in the party, $5 extra for guide

7 *Lv. Grand Canyon* in the evening.

---

8 *Ar. Riverside* afternoon. Hotels $3 up day A. P. "The City Beautiful" with its atmosphere of bygone days. The founders brought with them the spirit of the old mission fathers. They revived the old architecture as well as planted fruit groves and gardens.

9 Drive about the city along Victoria avenue, lined by hedges of everblooming rose trees, then along cross-roads of palms and acacias to the far-famed Magnolia avenue, one of the most beautiful driveways in the world. For ten miles the road stretches thru rows of fine pepper trees, eucalyptus palms and the magnolias that give the avenue its name. Later in the afternoon go by trolley to the Sherman Indian School. If you can, be there at sunset to witness the ceremony in connection with the lowering of the flag.

10 Drive to Riverside's famous Rubidoux Mountain. It divides the city from the broad acres of the Santa Ana Valley, rising to a hight of 1300 feet above the level of the streets. They have carved out of the solid rock one of the most wonderful automobile roads in the world. Father Junipero Serra, the pioneer mission builder, who often traveled thru the valley, rested at Rubidoux Rancho. On the summit the old Franciscan Fathers raised a cross in his memory. From the summit a panorama wondrously beautiful is spread before you.

11 Spend this day in going by train to San Bernardino, connecting there with trolley for Arrowhead Hot Springs at the foot of Arrowhead Mountain, 2000 feet high. Upon its slope is the great Arrowhead, a quarter of a mile in length, 550 feet wide, covering seven and a half acres. There is an attractive hotel here where you may stay and spend a few hours.

H. P. STIMSON

Formerly with Hotel Imperial

12 Spend the day at Redlands, another beauty spot near Riverside.

13 *Lv. Riverside* in the morning.
Ar. San Diego or *Coronado Beach* in the afternoon. Hotels $1 up E. P., $4 up A. P. San Diego is old in history, for wandering ships landed on her shore soon after the death of Columbus. She is favored in her bay, her mountains, her valleys, her climate—for here summer never ends—and in her romance of the past.

Coronado Beach, should you prefer to stay there, is situated on Coronado Peninsula, across the bay. Trolley and ferry make the trip to the city an easy one. The hotel located directly on the beach is one of the most famous in America. The Country Club is here and golf and tennis as well as polo may be enjoyed.

14 In the morning visit the Old Mission, seven miles from the city, going by sight-seeing auto. This is the most historic point in California, for this is the first mission founded by Father Junipero Serra in 1769. The old bells are still in the belfry, and portions of the old adobe walls are still standing. In the afternoon go via trolley to Old Town, where civilization began in California. Juan Rodriguez Cabrillo, a Portuguese navigator, landed here in 1542. Walk thru the old Spanish home called Ramona's marriage place.

15 Visit La Jolla via train. A quaint and attractive town on the ocean, sixteen miles north of San Diego. You will enjoy seeing the caves, the bathing coves, Alligator Head, the Witches' Caldron and other unique spots.

16 Go via sight-seeing automobile to Point Loma, the great promontory which shelters the bay on the west. The drive to the old Spanish lighthouse is along the ridge, where superb views are obtained of the Peninsula of Coronado and the quaintly
17 shaped Coronado Islands. Another day drive to Tia Juana in Old Mexico.

18 A few days must be given to the Ex-
19 position. It will be opened officially January 1, 1915, and close December 31, 1915. It is to be an "Exposition of Opportunity." There will be no display of products, but it will reveal the opportunities offered the home-seeker and investor.

20 *Lv. San Diego* in the morning.

21 *Ar. Los Angeles* or *Pasadena* in the afternoon. Hotels $1.50 up E. P., $3 up day A. P. The "City of the Angels" is one of the wonder cities of the world, for its growth has been phenomenal. The chief attraction lies in the beautiful flower-covered homes and the varied loveliness of the surrounding country. The climate is mild, flowers bloom thruout the year, and plants and shrubs grow to a great hight.

Pasadena is but seven miles distant, connected by trolley lines with cars every half hour between the two cities. It has a most picturesque location in the San Gabriel Valley at the foothills of the Sierra Madre range. Like Los Angeles, it is noted for the beauty of its homes. There is a wealth of pleasure here, fine automobile roads, wonderful trails for horseback riding and mountain climbing. The Country Club has a golf course of eighteen holes, besides tennis and polo. You may make your headquarters either here or in Los Angeles while visiting the points of interest with which this section abounds.

22 Go by trolley (starting in the morning) for a trip "around the beaches." The cars are comfortable, and in charge of a lecturer. Stops are made en route at points of interest and time is given for lunch at one of the many beach hotels. Return in the late afternoon.

3000 Treasure Islands!

You planned it out so carefully. Directly you grew up you were going to live like Robinson Crusoe on an island, only the person you cared most for, would be there also. In the Tropics one could swim and fish and sail, and live in the open all day. And the beautifully lonely nights, with only a scattering of friendly stars, and the prodigal young moon spilling honey on the sea, for company!

But while the years totalled up astonishingly, they never seemed quite able to overtake your dream. Other men broke away from the grind long enough to keep insultingly well, but somehow you never had the time.

Luckily when the breakdown came, your doctor, who could heal dreams as well as people, packed you off to NASSAU-BAHAMAS. There the temperature averaged 72 Fahr. and the air had the salt tang of the sea and the wild sweet fragrance of exotic flowers.

At first it was just loafing in the sun, then gradually lengthened surf baths, then interesting drives, then golf, then—why, then *you were another man.* Dark as a walnut, perfectly fit—you had found your Treasure Islands!

Not a "Cure" but a "Climate"

For beautifully illustrated booklet on the Bahamas, sign your name and address below, and mail Bahamas Government Agent, Suite 4, 303 Fifth Ave., New York City.

or LEONARD TUFTS, Owner
Boston, Mass.

Send for Illustrated Booklet giving full information

23 Give a day to the Old Mission Trip, which takes you inland along the foothills, thru orange groves and attractive homes, to the old San Gabriel Mission. On the return journey time is given to visit the Ostrich Farm.

24 Another day must be spent in going to Mt. Lowe. This is reached by cable and trolley and is a most interesting and fascinating trip. The cars wind round the mountain, making many curves over dizzy hights, to Alpine Tavern, 5000 feet high. The view is marvelous. Pasadena and Los Angeles and, on a clear day, Catalina Island, can be seen.

25 Mt. Wilson, another of the picturesque Sierra Madre chain, is reached by a comfortable trail on foot or horseback. There is a camp near the summit if you care to stop. On the crest is a parklike tract with giant pines, from which you look across a tremendous gorge into the heart of the range. Here also is the world-renowned astronomical observatory. The same day go via trolley to Long Beach. Here you will find one of the finest stretches of beach on the coast.

26 *Lv. Los Angeles* in the morning by train, going to its seaport, San Pedro, and connecting there for Catalina Island. This is a picturesque mountainous island, about thirty miles in length, and is a great winter as well as summer resort. The steamer lands at Avalon on the east coast of the island. The water near the shore is remarkably clear and it will interest you to take a trip in one of the glass-bottom boats.

27 *Lv. Los Angeles* in the morning.
Ar. Nordhoff at noon. Hotels $3 up day A. P. The Ojai Valley in which Nordhoff is situated is one of the finest in the state. It is about eight miles long and one mile wide.

28 *Lv. Nordhoff* at noon and
Ar. Ventura in about an hour. You will find this an ideal spot in which to spend the few hours necessary for train connection. There is a charming inn here, located on a high bluff directly overlooking the Pacific and islands opposite.
Lv. Ventura in the evening and
Ar. Santa Barbara in about an hour. Hotels $2.50 up A. P. This charm-city has a unique and beautiful setting, on the shores of Santa Barbara Channel, with a crescent-shaped range of mountains around it. Across the channel are a chain of mountainous islands, protecting the city and giving it a safe harbor. The climate is mild and equable.

29
30 Spend the days walking, driving or riding. Over a hundred miles of foot and horseback trails lead to beautiful waterfalls and glens up in the mountains. Drive to Miramar, a flower-girded cottage settlement located on the ocean three miles from the city. It can also be reached by train. Visit the Mission, 1½ miles from the center of the city. It can be reached by trolley. It was founded in 1786 and is the best preserved and best known of all the California missions. The garden is especially fine and the view from the belfry unsurpassed. Golf, tennis, boating and bathing are all possible here.

31 *Lv. Santa Barbara* in the morning.
Ar. Paso Robles Hot Springs in the afternoon. Hotel $4 up day A. P. These celebrated springs were known and used by the Indians before California history began. They are on El Camino Real, the royal road of Spanish days at the foothills of the Santa Lucia Mountains, in a great natural park of live oaks.

32
33 Drive along the royal road to Mission San Miguel, eight miles from the springs. It is one of the oldest and most attractive of California's missions. There are many other

drives, for the roads here, as all over the state, are fine. Horseback riding over the hills and thru the valleys is one of the chief delights. If you prefer, you may bowl, play golf or tennis or swim in an immense plunge.

34 *Lv. Paso Robles Hot Springs* in the morning.
Ar. Del Monte about noon. Hotel $4 up day A. P. "The Riviera of America" is the name given to the peninsula on which Del Monte is located, an ideal region having the broad Pacific on one side, the blue Bay of Monterey on the other, and the rolling hills with their forests of fragrant pine back of it. This delightful resort is situated in a park of 125 acres, which for beauty is worth the trip across the continent.

35 Take the famous 17-mile drive. You will be interested in the grove of ancient cypress.

36 Visit Monterey, from 1770 to 1849 the capital of California. It has many landmarks—old adobe buildings and early missions. Then drive three miles to the Carmel Mission, where lies the body of Father Junipero Serra. There are many other drives here if time permits. A fine golf course of eighteen holes, tennis courts in perfect condition, a Bowling Green and archery provide for sport.

37 *Lv. Del Monte* in the morning.
Ar. San José in the early afternoon. Hotels $3 up A. P. The "Orchard City" of California, set in the midst of millions of fruit trees. Beautiful Santa Clara Valley, at the head of which the city is located, was first settled by Franciscan Friars under Father Junipero Serra in 1777. Two of the old missions are within its limits.

38 In the morning a magnificent drive thru the Santa Clara Valley and along the foothills. In the afternoon take the delightful scenic trip by electric line along the foothills to Palo Alto and visit the Leland Stanford University.

39 A trip by auto to Lick Observatory on Mount Hamilton. The road goes over the foothills and winds around the mountains, giving many views of this wonderful valley. If you are fortunate enough to be in San José on Saturday, take the trip by the stage, leaving at 12 noon. A stop is made for supper and the summit is reached at 7 p. m. It is the one evening in the week that the building is open to the public and you will have the opportunity of seeing the heavens thru the wonderful telescope. You leave the summit for the return trip at 9 p. m. and are at your destination by midnight. It will prove a novel and interesting experience. (Cost $5.)

40 *Lv. San José* in the morning and
Ar. San Francisco in about two hours. Hotels $1 up a day E. P. You will
41 get a good idea of the city by taking the sight-seeing car, leaving Ferry Loop at 10 a. m. (Cost 75 cents.) This trip covers about thirty-eight miles, taking about three hours. The conductor describes the route, which includes the city, Golden Gate, Cliff House, near which are the celebrated Seal Rocks, Golden Gate Park, Mission Dolores, and other equally interesting points.

42 Take one day for the trip to *Mt. Tamalpais* (Cost $2.90), which includes the Muir Woods. Leave the city at 9 a. m. from Ferry Wharf. At the end of the boat trip change to the electric railway for Mill Valley, a pretty town nestled in one of the many canyons. Transfer here for the trip to the summit (2592 feet), which is made over the "crookedest railroad in the world." On a clear day the view is impressive. The ocean, the bay, the city and surrounding towns, and range upon

ATWOOD GRAPEFRUIT

No Other Grapefruit Equals It In Flavor

THE superiority of Atwood Grapefruit is not an accident. From the first planting the Atwood Grapefruit Co. has sacrificed everything for QUALITY. An initial expense of hundreds of thousands of dollars was incurred, while everything that scientific culture and experience could suggest was done to produce QUALITY. Even then some trees at maturity bore simply *good* grapefruit, but *not good enough for the Atwood Brand*. These trees were cut down and replaced by superior varieties.

So through the various processes of selection, cultivation and elimination has evolved the ATWOOD FLAVOR, as hard to describe as it is difficult to produce.

People who have eaten Atwood Grapefruit say:

"It is absolutely the best grapefruit I ever tasted."

"Fruit is fine and full flavored, 'The Best Ever'."

"They are the nicest fruit we have ever tried."

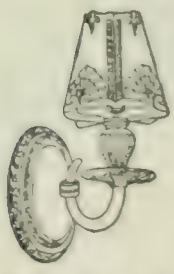
"The best that we have been able to secure."

"As usual, your grapefruit is 'way ahead."

"Fully ripe and delicious."

A well-known physician writes: "I prescribe grapefruit for all my patients, and tell them to be sure and get Atwood Grapefruit."

THE ATWOOD GRAPE FRUIT COMPANY. MANAVISTA. FLA. TRADE MARK.



Atwood Grapefruit is always sold in the trade-mark wrapper of the Atwood Grapefruit Co.

range of mountains including Shasta, with its snowy peak 300 miles away, are clearly seen. Stop here is long enough to have luncheon at the Tavern. About 2 p. m. the train leaves for Muir Woods. This canyon is in an absolutely primeval condition, entirely covered with a dense forest growth, the redwood predominating. A couple of hours stop-over are given here to see the Big Trees and San Francisco is reached about 5 p. m.

43 Go to Ferry Building and take trip to *Oakland* and *Berkeley*. This is over the Key Trolley Route and the boat leaves at 10 a. m. It covers sixty-eight miles and the cost is $1. At the end of the ferry ride you transfer to special trolleys, passing thru the residential section of Berkeley to the University of California, where a stop is made to tour the grounds and buildings, and visit the famous Greek Theater. From Berkeley the route is thru Oakland, where stop is made for luncheon and then on to Piedmont Park and various other suburbs around the bay. Return about 5 p. m.

One week or more should be given to the Panama-Pacific Exposition to open February 20, close December 4. While not officially open now, thousands of visitors are daily enjoying it. There will be no postponement of the Exposition on account of the war and even belligerent nations will be represented. The war will have the effect of diverting to San Francisco the tide of tourists ordinarily flowing into Europe, and besides having an opportunity to make the acquaintance of their own country, they will find at the Panama-Pacific Exposition an unequalled opportunity for the study of the achievements of modern civilization in industry, education and art. No other exposition has made such efforts to delight the eye and gratify the taste.

THE CONTROL OF PUBLIC UTILITIES

Municipalities and utility corporations voiced their solutions of the problems of public service freely and fearlessly at the Conference of American Mayors on Public Policies as to Municipal Utilities, held November 12, 13 and 14, in Philadelphia. The conference was called by Mayors Blankenburg of Philadelphia, Mitchel of New York, Harrison of Chicago, Baker of Cleveland and Shroyer of Dayton, and held in coöperation with the American Academy of Political and Social Science. Some hundred and fifty cities sent their mayors or their delegates and regulating commissions and corporations were also represented. The dominant spirit of the conference was cooperation—or as Louis D. Brandeis exprest it—interlocking the powers of the cities. The delegates unanimously felt the need of combination in order that the cities may receive adequate service when pitted against combinations of utility corporations with large capital. The addresses of the confer-

Constipation

How to Fight It

Constipation is the deadliest enemy of humankind. It kills more people every year than war, pestilence and famine combined. It begins subtly; soon forms poisons which cause Colitis, Appendicitis, Bright's Disease, Cancer and other dread diseases. Yet — Constipation can be remedied without drugs. Steady attention to daily habits permanently relieves the trouble. This is fully explained in a recent book by Dr. John Harvey Kellogg who thus gives you results of his treatment of thousands of cases during the nearly forty years he has been Superintendent of the great Battle Creek Sanitarium.

Dr. Kellogg is the world leader in "Preventive Medicine." He teaches you how to avoid sickness—how to stay well continuously. Dr. Kellogg's books are not dry and technical, because—he has the happy faculty of making his writings intensely interesting and so clear and concise they can be understood by anyone. In the book on Constipation, Dr. Kellogg tells you how to rid yourself of this affliction and stay rid of it. The book is not large—only a little over 125 pages—but its contents are worth many times the price. In board covers, the price is $1.50 but, to give the work widespread distribution, Dr. Kellogg has permitted a limited edition bound in library paper covers and, while these last, we shall sell them for **only $1.00**

Order today. You take no risk sending money because, if you are not entirely satisfied, you may return the book for prompt refund. Order now. Get relief from Constipation. Address—

ence analyzed the problem in all its phases, with the result that there was a free expression of all viewpoints which should indeed help to clarify the relations between city and corporation. Of course, no agreement between the views of the government and of the companies was to be expected, altho all the speakers insisted that fair play should rule. The majority of the representatives of the cities came out squarely for municipal ownership, Mayor Harrison's radical address sounding the keynote.

The resolutions unanimously adopted by the conference, however, would not commit the delegates on "the abstract question of municipal ownership," but exprest the view that "municipalities should be given the requisite power to municipalize public utilities, the expediency being a matter for local determination." No general determination was made "as between state board and local or home-rule regulation of public service corporations," but it was declared that "municipally-owned utilities should be subject to local control only." The majority of the municipal delegates urged local control as the solution. The representatives of the corporations, however, preferred state regulation. This is significant as indicating the widespread feeling that public service corporations have already settled down to an existence of regulation by state commissions, and that they are making the best of it.

The great concrete result of the conference is the formation of the Utilities Bureau—which will permanently undertake to coöperate with cities in furnishing the information and legal counsel necessary to the successful control of public utilities. The cities have already exprest their intention of contributing the information which cost them many years and thousands of dollars to obtain. With the personnel of the Bureau including Louis D. Brandeis, Frederick A. Cleveland, Felix Frankfurter, Leo S. Rowe, Frederick W. Taylor and Charles R. Van Hise, this conference, in its establishment, should definitely mark a new era in the relations between the people and their public services.

Carranza's and Villa's opinions of each other are ours, too.—*Omaha Bee.*

THE NEW BOOKS

EXPLORATION OF THE WEST

JOHN C. FREMONT, at the hight of of his picturesque career, became the romantic hero of his time and country, and it is astonishing that nearly twenty-five years should elapse after his death before the appearance of the first complete and critical biography. Perhaps it is as well, however, for in Mr. Dellenbaugh's *Fremont and '49* we have such a monument of painstaking research and scrupulous care as no hurried biographer could have given. Perhaps, moreover, no one in the country was so well fitted for the task as Dellenbaugh, not only by reason of literary training, and of sympathy with his theme, but because he himself has shared in experiences similar to those he recounts, and in the very region in the far West where "the Pathfinder" blazed the trails that civilization and industry have followed. Frémont was not always the first to tramp the desert-paths and thread the passes of the mountains, but he first of all linked them into practicable routes, and mapped them that others might follow. Nevertheless it has needed long and patient research to trace his footsteps; and the incidents of discovery, Indian warfare, hardship, and toil during the years spent in his adventurous quest form a thrilling tale, and bring into view fine human qualities.

To the extremely delicate and complicated political situation which developed in California following the Mexican war, and was forced upon our self-constituted authorities there in a most bewildering way by the sudden gold-rush of 1848-9, Mr. Dellenbaugh gives much space, for Frémont was deeply involved in it, and got himself into much trouble. Yet his biographer concludes that Frémont's motives were pure and his acts commendable—more than that, indeed, for it seems probable that had it not been for what Frémont did, in apparent insubordination to his superior officer—he was a man who all his life worked ill in harness—a threatened foreign seizure of California would have occurred. Frémont clinched firmly the hold of the United States upon the Pacific coast.

Very intimately connected with Mr. Dellenbaugh's name and fame is the subject of Ellsworth L. Kolb's *Through the Grand Canyon, from Wyoming to Mexico*. After Dellenbaugh's two books on the Rio Colorado and its turbulent navigation, one would think no more need be said. However, it remains a very notable feat—whether worth the doing is a matter of opinion—to navigate the gorges, and one who has done it and then added to the achievement the continuing of the descent to the Gulf of California, has a good right to make a book about it, more especially a very modest, straightforward and entertaining one, such as this is: it is an admirable piece of writing in its unassuming simplicity, lit up by good nature and enthusiasm.

The Kolb brothers, it must be said, had a higher object than simply to show that by wisdom in boat-building, courage and luck, they could go down the Colorado canyons—namely to photograph the river with a cinematographic camera, and so be able to exhibit to the world how these terrible rapids, plunging along a path a mile or so deep, really looked; and how a boat behaved when it was hurled down among the rocks and rollers. This they accomplished, with surprizing success; and the films they made in such thrilling circumstances as the book describes may now be seen by audiences a thousand miles from the wonderful river. It is a capital book for boys to read.

In the East the native American—the Amerind, Dellenbaugh likes to term him—is utterly gone and forgotten save to a few students. In the farther West, however, the red man is still accessible, and ethnologists, especially under the guidance of the Smithsonian Institution, have long been busy recording the customs, legends and fables that illustrate the psychology of the primitive Americans. Katherine B. Judson has performed the secondary labor of sorting out and putting into plain English form Indian legends so collected; and has thus given companion volumes to those issued in Europe recounting the folk-lore of savages in the Old World. Her latest contribution to the series is *Myths and Legends of the Mississippi and the Great Lakes*, and is made up of tales derived from tribes from the Gulf Coast to the shores of Lake Superior. Among them are many, "in the original form," of the legends used by Longfellow in his *Hiawatha* and others especially curious.

The West, as the East thinks of it, must now be looked for mainly in the far North; and it is only after Mr. Powell has reached nearly to the terminus of the wanderings recounted in his *End of the Trail* that the well-informed reader finds himself really interested. The eastern chapters deal the experiences and the observations—very worthy observation, too—of a party of gentlemen touring in an automobile from Texas to northern British Columbia, via the Yosemite and other fine, but not unheard of, places. In British Columbia, however, new ground is struck and every page of the book shows how far ahead of our casual information that province now is. It is a good book to put into your collection if you are going to the Pacific Coast next summer; and indispensable if you propose to extend your journey north of the international boundary.

An unknown country is opened to our view in *Lands Forlorn*, for Dr. Douglas with two companions made their way in canoes from the northern boundary of the United States to the Arctic Ocean by way of the Athabasca River, Great Slave Lake, Mackenzie River and Great Bear Lake, an eighteen-month voyage thru territory almost uncharted. The object of the expedition, the discovery of copper deposits like those of the Lake Superior region, does not seem to have been successful, but the adventurous explorers brought back a rich booty of information about the country and climate. The most interesting feature of the volume is the 180 photographs of strange scenes, excellently printed.

Frémont and '49, by Frederick S. Dellenbaugh. New York: G. P. Putnams Sons. $4.50.
Through the Grand Canyon, from Wyoming to Mexico, by Ellsworth L. Kolb. New York: Macmillan & Co. $2.
Myths and Legends of the Mississippi and the Great Lakes, by Katherine B. Judson. Chicago: G. C. McClurg & Co. $1.50.
End of the Trail, by E. Alexander Powell. New York: Charles Scribner's Sons. $3.
Lands Forlorn, by George M. Douglas. New York: G. P. Putnam & Sons. $3.

REDISCOVERING AMERICA

Since Dickens first set the fashion and discovered the humorous possibilities—or impossibilities—of America, every visiting foreign humorist has considered himself bound to write at least one book of American impressions. Now our native-born litterateurs have been forced to resort to the same brand of humor. Truly intrepid spirits have Julian Street and Wallace Morgan to set out to find—the one in prose, the other in picture—pleasure in what to the average American is little more than a blurred vision of arid plains, prosperous prairies, or cities of smoke and unending din as his business carries him from one to another of our famous hotels over the country.

To the unintelligent observer, or to the preoccupied business man, who is the railroad's biggest patron, American cities are likely to be dull with an almost irritating sameness and uniformity. They have none of the picturesqueness, color or historical association of the great cities abroad. Instead of a Piccadilly Circus, a Place de la Concord, an Unter den Linden, our thorofares bear such unimaginative, but intensely practical titles as "Fifth Avenue," "Chestnut Street" or—how many cities there are that boast it—a Main Street! Messrs. Street and Morgan traveled some five thousand miles and visited some twenty cities, yet in each with characteristic humor they were able to discover something distinctive; endow each with adjectives and adverbs all its own. Thus Detroit is a "young man's town," St. Louis is a "fashionable city without style," while Chicago is "a young demigod, the product of a union between Rodin's 'Thinker' and the winged victory of Samothrace." But they also saw other things, did these itinerant artists, the spirit of the great

plains, the majesty of the Rockies, the silences of the way places, but above all they caught the spirit of a contented and industrious people, filled with a great joy of living.

To all who remember the quaint and farcical humor of *The Need of Change* and *Welcome to Our City, Abroad at Home,* while it may not quite reach their high level, will be most welcome. But its greatest usefulness will be to those, prevented by present exigencies from going elsewhere, for whom it will serve as a most entertaining Baedecker to "See America First."

Abroad at Home, by Julian Street, illustrated by Wallace Morgan. New York: The Century Co. $2.50.

A FEMININE VAN CLEVE

Shrewd self-control is the stripe of character which Mrs. Watts constantly emphasizes in her novels. In *The Rise of Jennie Cushing* she has taken the soul of Van Cleve and translated it into the feminine gender, enriching it in the process, chiefly with the woman's intuitive love for beauty, but producing on the whole a rather less convincing figure, tho one of compelling interest. Jennie Cushing was trained in the slum; her account with that institution is a little overdrawn.

But despite the romantic strain in which this character is conceived Mrs. Watts cannot conceal the fact that she is more interested in the milieu than in the heroine of her book. She never creates a minor character. She excels in the sketching—sometimes with harsh strokes—of American middle-class types, and her anxiety to work these out with a maximum of realism sometimes makes her story lose pace.

Conceding that Jennie Cushing was possible—and to be sure she is beautifully consistent—her history serves the author well as a vehicle for her very considerable powers of social portraiture.

The Rise of Jennie Cushing, by Mary S. Watts. The Macmillan Co. $1.35.

JOHN BULL'S COUSINS

Frederick C. de Sumichrast apologizes for his *Americans and the Britons* on the ground that a new book on the American people can never be superfluous since "what strikes one observer as the most significant characteristic, appears to another of slight importance." Certainly an apology is needed for the present volume, which adds little or nothing novel to the subject. The author accuses the Americans of the same faults as are commonly ascribed to them: lawlessness, mannerlessness, plutocracy, and the low tone of their political life; and praises Americans for the virtues usually conceded: their love of peace and of education, the high position they accord to women and the strength of their democratic sentiment. A dull book, of fair intent, but distinguished by no insight.

D. Appleton. $1.75.

SERVICEABLE ORGAN MUSIC

The offertory, says James H. Rogers, "is the organist's best opportunity for making the organ a vital and integral

Still she did not speak.

HAROLD BELL WRIGHT'S

New Novel is

A Real Love Story

Delightfully Wholesome, Stirring in Action and Sweet with Sentiment for Christmas Giving.

The Genuine Charm

of the story is its style, color, conception and fancies. Its heart histories and soul tragedies are gripping with interest from start to finish. Its setting in Southern California is refreshing and romantic.

The Christmas Book of the Year

"Well, what do you want? What are you doing here?"

Beautiful and Appropriate for any Man or Woman or Boy or Girl

THE EYES OF THE WORLD

Illustrations in Colors by F. Graham Cootes

Cloth 12mo $1.35 Net

Nearly 1,000,000 Copies Already Sold

A Real Love Story with bigger plot and more action, deeper mystery and greater love, sweeter sentiment and stronger passions than any novel the author has yet written.

Philadelphia North American—In the novelist's "Their Yesterdays," the immediate predecessor of the present work, the mere duty and joy of living and loving was the underlying motive and theme. But in "The Eyes of the World," in addition to an intricate and finely wrought love story, the narrative conveys not only heart history, but sturdy censure of baser ideals in literature and art.

Harold Bell Wright has told this delightful romance so convincingly and has so clearly defined the underlying purpose of the story that it is stamped with the truthfulness of a chapter out of real life.

Kansas City Star—"The Eyes of the World" is powerfully written. It deserves a high place, whether you take it for its literary value or its moral lesson. Beyond a doubt the author has written a book that will rank with "The Shepherd of the Hills" and "The Winning of Barbara Worth."

Other Books by Harold Bell Wright

ESTABLISHED 1895 E. W. REYNOLDS, President 231-233 W. Monroe St., CHICAGO

Neurasthenia—Symptom, NOT Disease

Neurasthenia is due largely to habits which may be corrected by giving attention to causes of the ailment.

This is fully explained by Dr. John Harvey Kellogg, who gives you in his new book—"Neurasthenia"—results of his experience with thousands of cases treated during the nearly forty years he has been Superintendent of the great Battle Creek Sanitarium. Dr. Kellogg's book is not a dry book—not crowded in technical terms. On the contrary, Dr. Kellogg has the happy faculty of making his writings easily understood and intensely interesting. If you suffer from nervousness—constipation—sleeplessness—or any other form of Neurasthenia, get this book and study it. It shows the way out—teaches you how to obtain relief from the dread fangs of nervousness.

The book contains 416 reading pages, printed on fine book paper. There are several full page illustrations, diet tables and valuable instructions as to exercise, relaxation, rest and sleep. The regular price of the book is $2.00 but, to give the work widespread distribution, Dr. Kellogg permits an edition in library paper covers and, while these last, we shall sell them at only $1 a copy. You take no risk sending money because, if you are not entirely pleased and satisfied with the book, it may be returned for prompt refund. Order at once and get relief from nerve suffering. Address—

Now Ready

Report of Proceedings

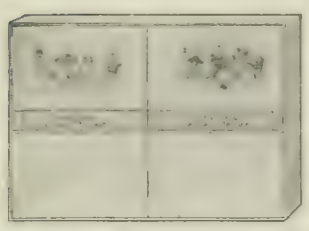
of the

Race Betterment Conference

Is there interest in the various agencies and organizations working for improvement of the race, this will prove the most intensely interesting book ever published. It brings to gether in one volume a complete report of proceedings of the most notable gathering of its kind in history—the First National Conference on Race Betterment.

This report makes a book of over *six hundred pages*. Included are some of the most convincing facts and statistics ever stated. Here you find the best efforts of Frederick Hoffman, Dr. Cressy Wilbur, Prof. Wilcox and others. In the section devoted to Individual Hygiene you find papers by Dr. Victor C. Vaughan—President of the American Medical Association—Dr. Sargent, of Harvard University, Mrs. Melvil Dewey, Dr. Knopf, Dr. Bishop, Professor Metcalf, of Oberlin, and Elmer Rittenhouse. Upon Narcotics, there are papers by Dr. Henry Smith Williams, Dr. Daniel Lichty, and Prof. Arthur Hunter. Dealing with the subject of Child Life are addresses by the late Jacob Riis (one of his most powerful utterances) Judge Lindsey and Robbins Gilman. On the Social Question are utterances by Doctors Winfield Scott Hall, Luther Halsey Gulick, Caroline Geisel, F. O. Clements and Prof. Graham Taylor. Upon the intensely interesting subject of Eugenics, are included papers by Dr. John Harvey Kellogg, Prof. Irving Fisher, of Yale University, Dr. C. B. Davenport, Supt. of the Carnegie Record of Eugenics Bureau, and other eminent authorities. School, city, state, national and institutional hygiene are treated by such authorities as Dr. Caroline Bartlett Crane, Dr. Lillian South, Sir Horace Plunkett, Rev. Newell Dwight Hillis, Dean Sumner, Dr. Austin, Dr. Hoag, Dr. Favill, and Prof. von KleinSmid—the world's greatest authorities on these subjects.

This book should be added to the library of every doctor, scientist, scholar and social worker because of the definitely helpful and practical suggestions contained. Its papers record years of work and results which are full of encouragement to those looking forward to development of a stronger, better and more enduring race. Interspersed in the volume are valuable diagrams and tables, illustrating the scientific side of the work, while many other illustrations emphasize the popular appeal.



This book has been prepared at great cost and, in consequence, the edition is limited to but a few thousand copies. While they last, we shall sell them, bound in half leather, for $5.00 a copy. A very few, bound in library paper will be sold at $2.00 a copy. This is a great opportunity to secure, on especially favorable terms, one of the most remarkable publications of the last hundred years. Order today, if you wish one of these books. You take no risk in sending money because, if you are not entirely satisfied, the book may be returned for prompt refund. Address—

THE INDEPENDENT **119 West Fortieth Street, New York**

part of the service as a solo instrument," and for the help of church organists who agree with that very sound opinion he has edited a collection of short pieces, all of a quiet and contemplative character, and published them in a book which he calls *Thirty Offertories for the Organ*. A few of his selections were written for the organ. More of them are transcriptions from pianoforte compositions by such masters as Gluck, Beethoven, Wagner, Brahms, Tschaikovsky, Saint-Saëns, Strauss, Debussy, and others.

Ditson. $2.

THE SOFT ANSWER

A contribution to the rapidly growing literature of feminism is Samuel McChord Crother's pleasantly written book *Meditations on Votes for Women*, genial and leisurely in style and careful of the sensibilities of the "American Gentlewomen" to whom it is dedicated, and whose "gracious manners and sweet reasonableness of soul" make them attractive to all men of sense. Yet the author reminds them that a "vote" means a "prayer," and begs for women the privilege of being as modest and unobtrusive as men in expressing their opinions. There is much wit as well as sound sense in the volume; the gentle answer to many objections that ought to turn away wrath.

Houghton Mifflin. $1.

FROM CAVE MAN TO GRAND MONARQUE

Professor James Harvey Robinson, the author of a well-known *History of Western Europe*, has worked much of the material of the earlier text-book into the first volume of *Outlines of European History*, just published. The bibliography has been brought up to date, the text revised, and a number of excellent illustrations in color and in black and white added. The chapters of the book dealing with ancient history have been entrusted to the able pen of Professor James Henry Breasted, the Egyptologist. In the course of some seven hundred pages the *Outlines* carry the story of human civilization from eolithic times to the age of Louis XIV.

Ginn & Co. $1.50.

TRAGEDY TEMPERED

Shifting Sands undoubtedly possesses the marks of melodrama—the initial tragedy-mystery dogging the footsteps of the hero—renunciation of love and a public confession. But Mrs. Romilly Fedden resolves it all into dramatic intensity as a background for the two unique and magnetic characters whom she has tangled in this web of circumstance, tho an attempt to relieve the strain results in a padding of local anecdote and color, occasionally too digressive.

Houghton Mifflin $1.35.

MUSIC'S HISTORY IN OUTLINE

Thomas Tapper and Percy Goetschius in their *Essentials in Music History* have compiled a text-book that should prove attractive and useful to many a "general reader" as well as to students preparing for school examinations in this subject. In clear and

concise manner it covers the antiquities of music, outlining what is known of the music of ancient nations and primitive peoples, and provides a simple and naturally consecutive recital of the modern growth of the art as one distinct manifestation of the development of human thought. The estimates of modern composers are distinct and discriminating. The book has many helpful illustrations, and a good bibliography of music history and its collaterals (esthetics, biography, and criticism) is contributed by Frank H. Marling.

Scribners. $2.

BUT SHE MEANT WELL

The author of *The Irresistible Intruder*, William Caine, is a past master in the art of depicting mischievous children. His latest heroine is five and alarmingly well-intentioned. "Hanna loved to be helpful" and her eager helpfulness makes trouble for a whole community, including a pair of lovers.

John Lane. $1.30.

WAGNER IN ENGLISH VERSE

Working backwards from *Parsifal*, which he published eleven years ago, Oliver Huckel now completes his admirable project of retelling in English verse the whole series of Wagner music-dramas with metrical versions of *Rienzi* and *The Flying Dutchman*. His versions make no attempt at literal translation, but do catch something of the spirit of the originals. Each is provided with a brief and concise historical introduction, and each has been put into a beautifully printed little book.

T. Y. Crowell. 75 cents each.

OUR PARTNERS IN LIFE

A companion book to *How the Other Half Lives* is Jacob A. Riis's *Neighbors*, published since his death. The indomitable courage and optimism of a great man are reflected in these life stories of people among whom he worked, and his depth of understanding reveals the heroism and fineness that even poverty cannot kill. To a rare degree he possest the capacity to make others share that faith in the ultimate worth of men and women that was the keynote of his life.

Macmillan $1.25.

MEMORIES OF OLD BOSTON

A handsome volume, descriptive of all that remains of the colonial city is Edwin M. Bacon's *Rambles Around Old Boston*. The ancient town and its stories are dealt with fully, but the modern city is touched only incidentally, as when some new building has encroached upon a spot sacred to old memories. The rambles were taken by three friends, the Antiquarian, the Englishman, and, happily, the Artist, Mr. Hornby, who has added to the pages many pleasant drawings of the elder town's picturesque corners.

Little, Brown. $3.50.

AN UNNECESSARY ARGUMENT

Mr. Harold Begbie's ever active pen has just produced in Socratic form *The Proof of God*, which is simple and attractive in style and full of common sense in its subject matter.

Revell. 75 cents.

BOOKS THAT STIMULATE THOUGHT

A WORKING FAITH

By HARRIS FRANKLIN RALL

"Dr. Rall's work will be found extremely stimulating and exceptionally valuable to those who are dwelling seriously upon the fundamentals of thought."—ZION'S HERALD.

Binding, cloth. Price, net, $1.00, postpaid.

CHRISTIANITY AND THE NEW AGE

By GEORGE P. MAINS

"This is a remarkable book. It is distinguished by mastery of its subject, wide scholarship, broad tolerance, clear vision, an earnest and fearless reverence for truth. Logical in its arrangement of argument and facts, and philosophical in its reasoning."—THE NATION.

Binding, cloth, gold top. Price, net, $1.50, postpaid

SOCIAL HEREDITY AND SOCIAL EVOLUTION

THE OTHER SIDE OF EUGENICS

By H. W. CONN, Professor of Biology, Wesleyan University

The purpose of this book, as stated by the author, is "to show that the laws of the evolution of animals and plants apply to human volution up to a certain point beyond which man has been under the influence of distinct laws of his own." **Binding, cloth. Price, net, $1.50, postpaid**

THE STARS NOT INHABITED

By LUTHER T. TOWNSEND

A strong, lucid discussion of a very important theme. Professor Townsend is well equipped for his task. While discussing scientific and philosophic theories, he is never abstruse or confused in thought or expression.

Binding, cloth. Price, net, $1.00, postpaid.

NEELY'S PARLIAMENTARY PRACTICE

By BISHOP THOMAS B. NEELY

Neely's Parliamentary Practice will exactly meet the needs of those officers and members of various organizations who desire to know the rules and methods of orderly and legal procedure. It will be found useful for all parliamentarians from the Congressman down to the member of the most modest literary society.

Binding, cloth. Price, net, 50 cents, postpaid.

THE NEW REVELATION THROUGH THE SPECTROSCOPE AND THE TELESCOPE

By JOHN F. DOWNEY

"A small but informing volume. It discusses the marvelous unfoldings brought to us in recent years by the spectroscope and the telescope. * * * Professor Downey gives evidence of competent scholarship."—CENTRAL CHRISTIAN ADVOCATE. **Binding, cloth. Price, net, 75 cents, postpaid.**

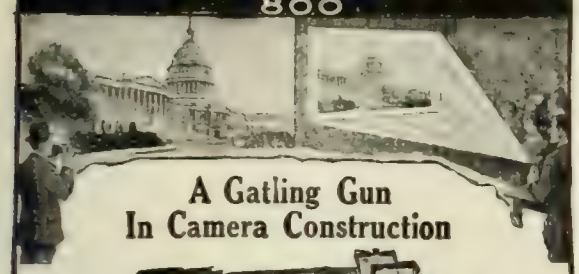
THE MARKET PLACE

THE EXCHANGE OPENS

After almost exactly four months the floor of the New York Stock Exchange is once more the scene of buying and selling. It is true that it is a restricted market that prevails there, hardly a colorable imitation of the free market of the piping times of peace. It is restricted in two ways. Only bonds may be dealt in and only at prices not lower than a minimum established by authority. But, within these limitations it is a free and open market. Even so much is a step forward.

The trading, which began on Saturday, November 28, went on under the watchful eye and the strict regulation of the Committee of Five, which has supervised all the trading between Stock Exchange members since the Exchange closed.

Fifty issues were traded in during the two hours of business on the first day, in varying quantities from a single bond in the case of such issues as Erie general 4s, New York City 4½s, Atchison general 4s, to such quantities as 77 Northern Pacific 4s and 98 United States Steel 5s. The total transactions of the day amounted to $639,500. Below appears a table showing all the transactions of the day.



It is a good record when one considers the inevitable factors in the situation. It is difficult to see how bonds can help going down. Interest rates must go up as the demand for money resulting from the war goes on mounting. As interest rates go up the price of bonds naturally go down.

It is not remarkable that so few bonds were sold on the opening day. It is remarkable that so many bonds were bought. The minimum price bar-

Write for free booklet on five acres at 6 per cent interest. Come at once and make your selection. We have land for sale from the Lake to the Mississippi River. Land and Cedar Company, Oconto, Wis.

rier prevented reckless selling; but it did not force any one to buy. When more than half a million dollars worth of bonds were bought, it was presumably because there was money to be invested, and confidence that those particular investments were good.

The Exchange's first day was only one more indication of returning confidence. The thing is in the air. With renewed confidence will come returning prosperity, slowly undoubtedly, but in the long run surely.

The following dividends are announced:

Brooklyn Rapid Transit Company, quarterly, 1½ per cent, payable January 1, 1915.

City & Suburban Homes Company, 2 per cent, payable December 4.

NEW RED CROSS MEMBERS

Each Contribution of Two Dollars or more constitutes the giver a Member of the American Red Cross for the current year, with a free copy of the October issue of the *Red Cross Magazine*. The Independent will send—by authority—to each contributor a Certificate of Membership and a Red Cross Button.

The total amount contributed to the Red Cross Relief Fund thus far thru The Independent is $4,765.69.

The following list covers the contributions of the past week:

Capt. W. H. Allen, Manila, P. I., $10; Miss H. Benediktson, Spanaway, Wash., $2; Miss N. Benediktson, Spanaway, Wash., $2; Mr. A. J. Blake, Marshall, Texas, $2; T. Buckler, Jr., Alma, Wis., $2; Donald A. Charnock, Sacramento, Cal., $2; Christian Endeavor Society of Congregational Church, Chester, N. J., $4; Miss Emily B. Colburn, Hume, N. Y., $2; Miss Helen F. Cooke, N. Brookfield, Mass., $4; Charles A. Denison, Argenta, Ill., $2; Miss N. Einarson, Duluth, Minn., $2; W. S. Fulton, Brookville, Pa., $5; Jos. Galloway, Fort Atkinson, Wis., $5; Lucy Milton Giles, Westminster, Mass., $2; W. C. Goodale, Lockport, Ill., $2; Mrs. Mary C. Gordon, Brookville, Pa., $25; G. M. Gordon, Amsterdam, N. Y., $5; Miss Esther K. Groskoff, Pella, Wis., $2; J. L. Hadsel, Oxford, Ohio, $2; Miss Ann Elizabeth Halpin, Odessa, N. Y., $2; Edward Halpin, Odessa, N. Y., $5; John L. Halpin, Odessa, N. Y., $12; E. M. Hastings, Lacona, N. Y., $2; Philip B. Hayward, Johnson City, Tenn., $3; A. L. Hemingway, Auburn, N. Y., $2; Miss Fanny Joergens, Laramie, Wyo., $2; Miss Alice S. Johnson, Champaign, Ill., $2; W. E. Jones, Waitsfield, Vt., $4; G. D. Kline, San Diego, Cal., $2; Miss Josephine Kobl, Mason City, Neb., $2; Dr. Ward H. Leonard and Charles S. Leonard, Kansas City, Mo., $5; Mr. S. Magnusson, Duluth, Minn., $2; Miss T. Magnusson, Duluth, Minn., $2; Miss Amy Magnusson, Duluth, Minn., $2; Leifur Magnusson, Washington, D. Atlantic Mutual Insurance Co.

Atlantic Building, 51 Wall St., New York

Insures Against Marine and Inland Transportation Risks and Will Issue Policies Making Loss Payable in Europe and Oriental Countries

Chartered by the State of New York in 1842, was converted to a stock company in 1849, the latter company was liquidated and paid all its capital to the extent of $100 per share, with interest at the stockholders, by the organized Mutual Insurance Company and repaid with a bonus and interest at the expiration of that term.

During its existence the company has issued policies to the value of $27,219,045,826.00

Received premiums thereon to the extent of 282,298,429.80

Paid losses during that period 141,567,550.50

Issued certificates of profits to date 89,740,400.00

Of which there have been redeemed 82,497,340.00

Leaving outstanding at present time 7,243,060.00

Interest paid on certificates remains to 22,585,640.25

On December 31, 1913, the assets of the company amounted to 13,259,024.16

The profits of the company revert to the assured and are divided annually upon the premiums terminated during the year, thereby reducing the cost of insurance.

For such dividends certificates are issued subject to dividends of interest until ordered to be redeemed, in accordance with the charter.

Good men, whether experienced in life insurance or not, may make direct contracts with this Company, for a limited territory if desired, and secure for themselves, in addition to first year's commission, a renewal interest insuring an income for the future. Address the Company at its Home Office, No. 277 Broadway, New York City.

GET THE SAVING HABIT

The habit of saving has been the salvation of many a man. It increases his self-respect and makes him a more useful member of society. If a man has no one but himself to provide for he may be concerned simply in accumulating a sufficient sum to support him in his old age. This can best be effected by purchasing an annuity as issued by the Home Life Insurance Company of New York. This will yield a much larger income than can be obtained from any other absolutely secure investment. For a sample policy write to

HOME LIFE INSURANCE COMPANY

256 BROADWAY NEW YORK

CITY & SUBURBAN HOMES CO.

15 WEST THIRTY-EIGHTH STREET.

New York November 24, 1914.

At a meeting held this day a dividend of TWO PER CENT. payable out of the net earnings for the SIX MONTHS ENDING October 31, 1914, was declared on the capital stock issued of this company, and ordered paid on December 4 next to stockholders of record on December 1, 1914.

ISAAC N. SELIGMAN, Treasurer.

BROOKLYN RAPID TRANSIT COMPANY.

New York, November 23, 1914.

The Board of Directors has this day declared a quarterly dividend of one and one-half per centum (1½%) on the outstanding capital stock of this company, payable on January 1, 1915, to stockholders of record at the close of business, on Wednesday, December 9, 1914.

J. H. BENNINGTON, Secretary.

WANTED $100,000

I wish to get in touch with some person having capital to invest on farm mortgages in a section where this method of investment is unknown. Farmers borrow from banks on short time and high rate of interest. I know that more than $100,000 can be placed with security as good as government bonds, with more than double their return in interest, which in most cases will be payable in advance. I can satisfy anyone interested as to my honesty and business ability. Address

J. M., care of The Independent

INSURANCE

CONDUCTED BY W. E. UNDERWOOD

This department of The Independent will undertake to furnish on the request of readers any information respecting the business of insurance and the companies transacting it which we have or can procure. We cannot, however, pass upon the debatable comparative differences between companies that conform to the requisite legal standards set up for all, except in so far as the claims made by any of them seem to be inconsistent with the principles of sound underwriting. Address all communications on insurance subjects to the editor of the Insurance Department.

WORKMEN'S COMPENSATION INSURANCE

There are many unsatisfactory elements in that scheme of industrial insurance which has come to be known under the name of workmen's compensation. Altho quite old on the continent of Europe, the system is but in its swaddling clothes here; but, as is to be expected of every enterprise taken hold of by a vigorous and virile people, it is growing lustily. Perhaps a few of the defects intimated are inherent and may successfully defy the finest actuarial and underwriting ingenuity enlisted in the efforts made to eliminate them. That the plan can be brought to comparative perfection—to a practicable working basis—is certain. That it may be reduced to conform with the scientific principles governing life insurance, is not hoped.

No system of insurance can be entirely perfect which in any degree leaves to the insured any power to hasten or delay the occurrence of the event the consequences of which are insured against. Then it follows that even life insurance is and will always remain slightly defective because the insured can destroy his own life. But that is largely provided against by nature itself. Comparatively few human beings will go to that extremity, and I think we are safe in concluding that those who do have lost all sense of proportion—that the mind, that is to say, the brain, has become diseased. In no other respect is the scheme of life insurance defective.

It is almost discouraging to contemplate the many unfavorable factors which must be faced by those who are struggling with the problem of workmen's compensation in this country, a region of diverse interests, conglomerate working population, varying wage-scales and differing codes of laws. There are forty-eight sovereign governments, each one of which purposes enforcing its own peculiar system of workmen's compensation insurance, no two of which are alike. Then there is the big, the threatening, moral hazard known as malingering, a mischievous power in the control of the insured, and of which he cannot be deprived. This element alone is capable of bringing to the verge of ruin the most scientifically constructed plan that may be devised.

Again, workmen's compensation insurance is defective in that it is not a continuous, a constant protection. It covers only against the hazards of employment and during the hours of that employment, some eight or ten out of twenty-four, leaving uncovered all other hazards during fourteen or sixteen hours of each day. To be complete, it should except no hazards and no term of time. Will it ever reach this stage of completion? My guess is that it will.

PONDER IT

Nineteen hundred and fourteen moves steadily to its close. We now count its tenure by weeks instead of months. Each day, each hour, is an opportunity and all teem with service—discharged or neglected. The years come and go, welcomed and lamented, and Time with rare impartiality adds them to our lives and takes them away. They are to be spent or invested. Most of us are prodigals; and this is strange, for we may retrieve everything we lose but time. One of the finest lines in the literature of the drama occurs in a rather commonplace, sensational play, and runs: "Oh God, turn back the universe and give me yesterday." A vain petition, but it is a fragment of human soul laid bare.

How many hundreds of yesterdays we would have returned to us; how many thousands of tomorrows we would willingly give in exchange for them?

The day comes when the strong man puts down his tools at night for the last time, full of plans for the morrow, and goes home—never to return to the field of his triumphs and defeats—goes home to die; to be chained to a chair or a bed as a galley slave to his bench; to gaze thru a window on the loveliness of a world that is fast fading under his mortal eyes. He lives his short lease with the ghosts of departed days, which smile approvingly or sadly as he has used them.

There is just one fraction of time we own in fee: Now. If there is anything we have left undone, or performed incompletely, we may now make whole or partial reparation. Even now it may be too late, but we can at least examine into it—that opportunity remains.

Among the objects of human neglect life insurance too often stands conspicuous. It holds out its welcome to all the children of men and only begs acceptance.

Waiving all discussion as to which party, company or assured, should pay the new internal revenue stamp taxes, the Employers' Liability Assurance Corporation announces that it will bear the expense.

PEBBLES

Motto for Congressmen—When in doubt, make a speech.—*Life.*

Ed—He seems to be wandering in his mind.
Fred—Well, he can't stray far.—*Princeton Tiger.*

"See here, milkman, I don't think the milk you are giving me is pure."
"Madam, to the pure all things are pure."—*Life.*

Distrest Damsel—Oh, sir, catch that man! He wanted to kiss me.
Pensive Pedestrian—That's all right. There'll be another one along in a minute. —*Williams Purple Cow.*

Wild-Eyed Customer—I want a quarter's worth of carbolic acid.
Clerk—This is a hardware store. But we have—er—a fine line of ropes, revolvers and razors.—*Yale Record.*

Again we see the movie man
Slap another with a pie,
Smile, poor student, if you can—
Isn't he a funny guy?
—*Penn State Froth.*

WAR

"Now, Ethel, Harold says he's sorry he broke your doll, so I want you to forgive him."
"I'd feel more like forgivin' him, mother, if I could swat him one first."—*Life.*

The sailor had been showing the lady visitor over the ship. In thanking him she said:
"I see that by the rules of your ship tips are forbidden."
"Lor' bless yer 'eart, ma'am," replied Jack, "so were the apples in the Garden of Eden."—*Tit-Bits.*

The latest Boston story is about a small child who fell out of a window. A kind-hearted lady came hurrying up with the anxious question, "Dear, dear! How did you fall?"
The child looked up at the questioner and replied, in a voice choked with sobs, "Vertically, ma'am."—*Tit-Bits.*

DANCING LESSONS—THE ONE-STEP

(An extremely difficult dance, requiring many weeks of practise.) Turn your partner's back to the wall—so she can't see where she's going—and push her gently the length of the hall. When all the way there turn her half-way around and push her the other way. If she doesn't like it, push her thru a window.—*Yale Record.*

CROWS

Stumps, stumps, stumps, stumps of trees—uncountable, *ad libitum*, one might almost say *ad infinitum*.
Stumps shrinking into the opalescent bush perspective.
Stumps for—roughly speaking, for nothing is so sincerely deceptive as distance—a trio of miles ahead.
Stumps in a silent landscape.
Crows, crows, crows! Immobile silhouettes; coal black, carven out of the veritable combustible itself!
A crow to each stump; not a stump without its crow.
Stump. Crow. crow, stump. Stump, stump, stump. Crow, crow, crow—*ad libitum*, *ad infinitum*, for, at least, three miles.
Caw, caw, caw, caw caw!
Sudden movement! The shock of sound!
See, the crows have awakened. The landscape palpitates.
Whirr! Whoosh! Flap! Flip! Caw, caw, caw, caw!
The crows fly, aviate, mount upwards, blobbing the empyrean and singing their heart-piercing song of freedom: "Caw, caw, caw, caw!"
Meantime the stumps are left desolate.
Oh, stumps, stumps, stumps. Oh, stumps of trees!

JUST A WORD

A series of Four Articles of great significance on important phases of the relations between the United States and the Republics of South America will be published in The Independent during the four succeeding months. The titles of the articles, with the names of their distinguished authors, are as follows:

"Past and Present Relations of the United States to the American Republics," by John Bassett Moore, recently of the State Department.

"Industrial and Commercial Effects of the Panama Canal and Their Influence on World Relations," by Hon. Theodore E. Burton, of the Committee on Foreign Relations, United States Senate.

"Possibilities of Friendly Coöperation Between the United States and Latin-America," by Hon. William Jennings Bryan, Secretary of State.

"The Western Hemisphere and the World of Tomorrow," by Professor Franklin H. Giddings, of Columbia University.

The best illustration of the scope and value of the proposed Independent Efficiency Service comes in the congratulations, queries and offers of coöperation which have been received from all parts of the country. For instance, a great New York financier, head of a world-famous banking house, stopped his work in the midst of a rush morning, studied the announcement closely—then declared this a brand new method of educating employees, with more attractive features than any other method in his knowledge. The founder of a health system said to have forty thousand students and practitioners in the United States, offered to enclose announcements in his official correspondence reaching all parts of the world. The president of an international corporation was so deeply interested that he wrote personal letters to fifty special friends—bankers, merchants, manufacturers and railroad presidents—urging them in a friendly way to profit by the Service, for the benefit of their employees. A domestic science expert invites the readers of The Independent to visit her laboratory, and volunteers her aid in improving household arrangement. The West Side Young Men's Christian Association of New York is distributing a large number of copies of the Efficiency Number to its members on the ground that a good worker is usually a good man and hence efficiency aids morality. A lady in Virginia writes: "Mr. Purinton's article in The Independent was like an open door thru which a great light shone. The writer desires for herself, husband and three sons the most practical method of studying Efficiency."

Announcement concerning further Efficiency articles by Mr. Purinton, and further development of the Efficiency Service, will appear next week. Mr. Purinton will answer, either thru the pages of The Independent or by personal letter, questions in relation to personal efficiency, health, work, and business. These questions should be confined to a single sheet of paper and addrest to The Independent Efficiency Service, 119 West Fortieth Street, New York.

Our second annual Automobile Number will bear date of January 4th. The progress of the automobile industry in this country during the past twenty-three years has been phenomenal, and in an illustrated article under the title "America's Second Industry," Bronson Batchelor, a staff writer of The Independent, will trace this progress in interesting and graphic fashion.

A sixty-day campaign for again doubling the circulation of The Independent has just begun. It closes February first. With the same hearty coöperation on the part of our readers that was given to the Sixty-fifth Birthday campaign a year ago, this War-Time Coupon will make possible the most popular Christmas gift of the season.

VOLUME 80 MONDAY, DECEMBER 14, 1914 NUMBER 3445

THE PRESIDENT'S ADDRESS TO CONGRESS AND TO THE NATION

THE address of the President at the opening of the last session of the Sixty-third Congress is characteristic. It is short, pointed, graceful in expression, lofty in tone. It is not only an address to Congress. It is an address to the American people.

Mr. Wilson makes few recommendations. In so doing he undoubtedly has regard for the salient fact that it is the short session which is beginning, and that Congress has less than three months in which to accomplish the task, heavy in itself, of passing the great appropriation bills. The legislation which he urges is none of it new; it has all been before Congress at the session just closed, and most of it was past by one house.

WITH his customary literary skill, the President relates the legislation which he recommends, to the conditions created by the Great War. As the war progresses, he declares, the countries of Europe "will need our help and our manifold services as they have never needed them before; and we should be ready, more fit and ready than we have ever been." The rest of the world, especially the states of Central and South America, will also need our help. "The nations," he says, "whom Europe has usually supplied with innumerable articles of manufacture and commerce of which they are in constant need and without which their economic development halts and stands still can now get only a small part of what they formerly imported and eagerly look to us to supply their all but empty markets."

In order to fulfil this mission of usefulness thrust upon us by war, we must do, in Mr. Wilson's view, two things. We must make it possible, as it has not been possible in the past, to develop the rich resources of our national domain; and we must create a merchant marine to distribute our products to the markets that await them."We have," says Mr. Wilson, "the wish to serve and to serve greatly, generously; but we are not prepared as we should be. We are not ready to mobilize our resources at once. We are not prepared to use them immediately and at their best, without delay and without waste."

To accomplish these purposes, there are three measures pending in Congress which the President would have pushed to final enactment. Two relate to conservation; they have both already past the House and are ready for immediate action by the Senate. The one aims "to unlock, with proper safeguards, the resources of the national domain." This we owe "not only to the people of that great western country for whose free and systematic development . . . our legislation has done so little, but also to the people of the nation as a whole." The other is intended "to encourage the use of the navigable waters . . . for the generation of power." This we owe "in fulfilment of our repeated promises that the water power of the country should in fact as well as in name be put at the disposal of great industries which can make economical and profitable use of it, the rights of the public being adequately guarded the while, and monopoly in the use prevented."

The third measure provides for a government owned merchant marine. The plea for this piece of legislation Mr. Wilson bases upon these assertions:

1. We cannot carry our goods to the empty markets that await them if we have no ships.

2. We cannot get the ships if we wait for the trade to develop without them.

3. "To retrace the steps by which we have, it seems almost deliberately, withdrawn our flag from the seas . . . would take a long time" and much detailed legislation, "and the trade which we ought immediately to handle would disappear or find other channels while we debated the items."

4. We must cut the Gordian knot by enabling the Government to open wide these gates of trade before it is altogether profitable to open them or altogether reasonable to ask private capital to open them at a venture.

5. The Government should provide shipping facilities where to provide them would not be at first profitable, and should withdraw when the project has become sufficiently profitable to attract private capital.

THERE is one other piece of legislation which the President urges as especially appropriate at this time. It is the bill giving a larger measure of self-government to the Philippines. "How better," he asks, "in this time of anxious questioning and perplexed policy, could we show our confidence in the principles of liberty as the source as well as the expression of life, how better could we demonstrate our own self-possession and stedfastness in the courses of justice and disinterestedness than by thus going calmly forward to fulfill our promises to a dependent people who will now look more anxiously than ever to see whether we have indeed the liberality, the unselfishness, the courage, the faith we have boasted and professed?"

From these concrete recommendations of legislation the President proceeds to consideration of two general topics. In considering one of these, he speaks to Congress, in considering the other to the nation.

The first is economy. "The duty of economy," he says, "is not debatable. It is manifest and imperative. . . . We are spending the money of the great people whose

servants we are—not our own. We are trustees and responsible stewards in the spending."

The people, he declares, are not jealous of the amount the business of government costs, but only desirous that "they get what they need and desire for the outlay, that the money is being spent for objects of which they approve, and that it is being applied with good business sense and management."

"It is not expenditure but extravagance that we should fear being criticized for," he continues. "The nation is not niggardly; it is very generous. It will chide us only if we forget for whom we pay money out and whose money it is we pay."

These are admirable and sound propositions. It is strongly to be hoped that they will be kept in mind and applied if such traditional dippings into the public purse as river and harbor and public building bills are proposed in Congress.

THE final subject with which Mr. Wilson deals is national defense. In speaking to the nation on this point the President is obviously moved by a desire to curb the unquiet and unhealthy agitation which is being stirred up with the object lesson of the European war as a text.

We have no reason, he declares, to fear threats against our independence or our territorial integrity. We fear the power of no other nation. We mean to live our own lives as we will; but we mean also to let live. We threaten none, we covet the possessions of none, we desire the overthrow of none. We are the champions of peace and concord.

We have always had a clear and settled policy as to military establishments. We need and desire no large standing army. We are ready to defend ourselves to the utmost, but to do it we shall not turn America into a military camp.

"We must depend in every time of national peril," continues Mr. Wilson, ". . . not upon a standing army, nor yet upon a reserve army, but upon a citizenry trained and accustomed to arms. It will be right enough, right American policy, based upon our accustomed principles and practises, to provide a system by which every citizen who will volunteer for the training may be made familiar with the use of modern arms, the rudiments of drill and maneuver, and the maintenance and sanitation of camps. We should encourage such training and make it a means of discipline which our young men will learn to value. It is right that we should provide it not only, but that we should make it as attractive as possible, and so induce our young men to undergo it at such times as they can command a little freedom and can seek the physical development they need, for mere health's sake, if for nothing more. Every means by which such things can be stimulated is legitimate, and such a method smacks of true American ideas."

Passing from the land to the sea, the President declares: "A powerful navy we have always regarded as our proper and natural means of defense. . . . We shall take leave to be strong upon the seas, in the future as in the past; and there will be no thought of offense or of provocation in that. Our ships are our natural bulwarks."

Then Mr. Wilson asks the pregnant question: "But who shall tell us now what sort of navy to build? . . . When will the experts tell us just what kind we should construct—and when will they be right for ten years together, if the relative efficiency of craft of different kinds and uses continues to change as we have seen it change under our very eyes in these last few months?"

Mr. Wilson's observations on this vext question of national defense blow like a cooling wind over the fevered excitement of the vociferous jingoes. They are as far removed from the one extreme as the other—the visionary impracticability of the non-resistant and the brutal pugnacity of the militarist. We are convinced that here President Wilson interprets the spirit of the American people aright. In the hands of a man who views both our national responsibility to protect our own and our national obligation to do justice to others in such a light, our national honor and well-being are safe.

Without attempting to appraise his proposals of specific legislation, to which we shall return from time to time as occasion demands, we have no hesitation in saying that the President's address is a splendid document, resonant in tone, admirable in expression, lofty in spirit.

THE ARMAMENT FLURRY

AT the very moment when four continents and the seven seas are witnessing the greatest war known to history and ten million men in arms are drenching the world with human blood, when the pretension that militarism is a preserver of peace has utterly collapsed and Europe is on the verge of moral and material bankruptcy, we are told that the United States must imitate the folly of Europe and proceed forthwith to build up a great and ever greater army and navy.

It is time to use such sense as God has given us. When our population was three million, or five million, or ten million, or fifty million, we feared no nation on earth. We were never attacked. It is a historical fact that we forced every war we had. Now, however, with one hundred million people and one hundred and fifty billion dollars of wealth, with Europe locked in a death struggle and the only military power in Asia doing everything in her power to hold our friendship, it is suddenly declared that our security is endangered and we are asked to accept the great illusion that armaments are our only protection against this peril.

There are many reasons why there is less need of increasing our armaments now than for a number of years. We shall mention but three:

1. All the powers that could do the United States any harm, except Italy, always our friend, are engaged in war. Those nations, with the exception of Japan, will have to recuperate a long time before they can become dangerous to us. Japan has shown itself eager to be our friend; the only danger in that direction will come from our own actions. As the great nations of the world are sedulously cultivating our friendship, it is inconceivable that they will change their attitude over night and make war on us within a time sufficiently near to demand preparation for it at this minute.

2. If we increase our armaments now how shall we go about it? Shall we build battleships? There is not a little reason to think the battleship is a thing of the past. Japan has just announced that she will build none

this year. Shall we build forts? Forts no longer protect men. Men have to protect forts, as witness Verdun. Shall we build submarines and aircraft? Possibly, but no wise man would advise plunging in this respect until the lessons of the war have become more evident.

3. The United States now seems destined to play the most important rôle at the end of the war in the great reconstruction of civilization that must follow. The powers that seem most likely to win declare their intention of demanding some sort of disarmament. Will the United States then jeopardize her great influence at that supreme hour by losing her head now? If we refuse to be stampeded our example will encourage Europe to go much farther toward disarmament than it otherwise would. Moreover, the sincerity of any peace proposals we then make will not be impugned.

The United States should go to the Peace Conference prepared to announce to the world that we are ready:

First, to join in an international agreement for the limitation of armaments, or if the nations are not ready for that,

Second, to join a League of Peace provided at least two other of the Great Powers will join with us, the League agreeing to reduce its armaments to the point where its combined forces are slightly larger than those of the greatest outside nation or alliance likely to attack it and to use its armaments to maintain international treaties and the decisions of international courts and parliaments.

If either of these alternatives is adopted the United States will then be in a position to decrease her armaments. If, however, the world is not yet ready to limit armaments and the proposals of the United States are spurned, then and then only will it be in order for the United States to determine whether her security demands the further expenditure of hundreds of millions for armaments and the withdrawal of hundreds of thousands of young men from fields and factories to the barracks.

There can be no objection to an investigation being made now or later by Congress, by Security Leagues or by Peace Societies to see if our army and navy are inefficient or insufficiently manned and equipped. If there are not enough shifts to handle the coast defense guns, if fifteen thousand enlisted men are needed to complete the crews of our warships, if there are only fifty large torpedoes on hand, there is every reason why the deficits and deficiencies should be made up at once. We want the best army and navy in the world for their size.

But to go beyond this and propose that we adopt an entirely new military policy of increased armaments at this moment is pure mob hysteria. The American people should set their faces like flint against it.

WELCOME RUMORS

IT is rumored that the President has it in mind to attend the executive sessions of the Senate. This he has an undoubted right to do under the Senate's standing rules. It is also rumored that he would like to have Cabinet officers entitled to seats in the House without votes. This would need either an amendment to the House rules or new legislation.

It would be well if he could accomplish both things. Americans were once proud that the fathers had put the executive, the legislative and the judiciary into more or less water-tight compartments. But the fathers, out of the fullness of their experience, were afraid of kings.

We do not like kings a bit better than they did. But we do not fear their interference. Our democracy is of too stout a growth. There is no danger of any American President turning into a tyrant. He is the most democratic thing in the United States. For he is the one officer elected by all the people.

The British, from whose bitter experience we thought we were taking a lesson when we built a wall between executive and legislature, know better. The British executive leads the legislature, the British legislature selects, keeps in office and dismisses the executive.

Every President of recent years that was worth his salt has felt a keen responsibility for legislation. Anything which will bring the executive and the legislature into closer touch and more complete coöperation will be a step forward.

We trust that the rumors are accurate, and that the President will accomplish his purposes.

A BIENNIAL ABSURDITY

LAST month a new Congress was elected. Last week a new session of Congress opened. Is it the new Congress that is holding this new session? Certainly not.

It will not be until December, 1915, that the men selected by the people in November, 1914, begin to carry out the mission with which they have been entrusted. At the election many members of the House were relegated by their constitutents to private life. But for three months they will continue to represent the voters who have refused to keep them longer in office.

This is one of the most curious anomalies of our system of government. Possibly in the days of stage coaches and post horses and constitution making there may have been some reason for it. There is not the shadow of a reason now. Democracy demands that the will of the people be made promptly effective. A public opinion which must wait thirteen months after it has exprest itself before it can be put into effect suffers a heavy handicap. This is neither democracy, efficiency nor good sense.

Here is a good place for a constitutional amendment.

THE SUBJECTION OF SERVIA

ON June 28 a Servian youth in the capital of Bosnia fired a shot that was heard round the world. A month later the Austrians began their revenge by the bombardment of the Servian capital, which has now fallen into their hands. Within this brief interval events so momentous have occurred that the public has paid little attention to the rights and wrongs of the acts which precipitated the universal catastrophe. The German Government, assuming that Great Britain would be reluctant to take up arms in defense of a contemptible assassin of a nation notorious for its atrocities, took advantage of the occasion to bring on the war which it believed was sooner or later inevitable. But it was rightly felt by the world at large that the war was wrong however justifiable its pretext and so while no one sympathizes with the criminal and but few with

Servia there has been general condemnation of the high-handed retaliation of Austria.

Prinzip, the nineteen-year-old student who shot the Archduke and his consort, has with his conspirators been tried at Sarajevo and found guilty. We have, indeed, heard only the Austrian side of the story and we might be skeptical of the absolute impartiality of a trial on which the justification of the Austrian ultimatum depended and which was carried on while the sound of the Servian cannon could be heard in the courtroom. It must be remembered, too, that five years ago the Austro-Hungarian Government appealed to the world against the machinations of Servia and brought forward in support of the allegation documents which, when the alleged conspirators came to trial, were proved to have been forged in behalf of the Government like the evidence in the Dreyfus case. It may be questioned, too, whether the Servian Government would be so unwise, even if they were so wicked, as to encourage the assassination of an Heir Apparent of pro-Slav sympathies, knowing that it would bring down upon them what they most dreaded, the vengeance of Austria.

But we have no disposition to question the verdict of the Sarajevo court. Prinzip and his accomplices freely confest, in fact openly gloried in their crimes, justifying them on the ground that their object was the freeing of the Serbs from Austrian tyranny. It does not matter whether the bomb and the revolver used at Sarajevo came from Belgrade or elsewhere since we know that the motive for their use came from there. The Serbs have made no secret of their intention to overthrow Austrian rule in Bosnia and Herzegovina and to incorporate these provinces in a Greater Servia. Nor can we believe that they would be scrupulous as to the means used to accomplish their ends when we recall the fact that King Peter of Servia owes his throne to the assassination of King Alexander and Queen Draga by their own officers. Since we have read the report of the Carnegie investigating committee on the conduct of the Balkan wars, the very name of "Servia" gives us a sickening sensation, so it is too soon for the Serbs to expect American sympathy in their nationalistic aspirations.

Neither can we see that Bosnia and Herzegovina would gain by annexation to Servia. Austrian rule has much of the arrogance of the Prussian without much of its efficiency, but still it is undeniable that Bosnia has made much more progress toward civilization since 1878 than Servia. Even if the Orthodox Serbs of Bosnia should gain by the change it would be hard on the Moslems and on the Croats, who are Catholic Serbs. The Emperor of Austria even supports a Mohammedan theological seminary, but Servia is the most intolerant of the Balkan states toward other faiths than her own and has little liking for schools of any kind. Eighty per cent of the inhabitants of Servia cannot read, while Bulgaria, under similar handicaps, is rapidly reducing illiteracy to a minimum.

The action of Austria in annexing Bosnia and Herzegovina in 1908 is still denounced by the English as an outrage upon a helpless people and a violation of the Treaty of Berlin—which is highly amusing when we think that it was at the suggestion of Lord Salisbury that the provinces were given to Austria and that Austria might have annexed them then with the approval of England, France and Russia. It was Hungarian jealously that caused the Austrian Government to prefer to have the milder and more ambiguous word "occupation" inserted in the treaty.

The question of the disposition of the Serbs should of course be determined, not by legal terminology, still less by force of arms, but by the best interests of the people involved. The case is somewhat very similar to that of Germany's annexed provinces. The Germans contend that Alsace and Lorraine have prospered under their administration. The French contend that the people do not like their administration but want to join France. The Austrians contend that Bosnia and Herzegovina have prospered under their administration. The Serbs contend that the people do not like their administration but want to join Servia. Both sides may prove their point without settling the question, for the arguments do not meet.

•

THE LOS ANGELES RESURRECTION

THE papers are giving us a wonderful story—and it is wonderful—that of the woman in a hospital in Los Angeles who was undergoing under an anesthetic a major operation on the viscera. She quite collapsed. She ceased to breathe; her heart ceased to beat; she was dead. No question of it in the mind of the attending physicians. They tried to induce breathing, but in vain. Then the surgeon reached his hand up thru the opened cavity until he had found the heart, and held it between his finger and thumb, pressing it rhythmically to imitate its regular beating. After a little while it began to beat feebly of itself, and the lungs began to breathe, and they gave oxygen, and the woman is now likely to recover.

It was a wonderful case, proving the possibility of what had been previously conjectured; but that is not the full point of the story as sent to the press. She was quite dead, we are told, but how about her soul? Where was it meanwhile? And the implication is, was there any soul apart from the body?

"Where was the soul?" We can know little of the relation of the soul to place and space. If it has location we do not know where it is, in the body or out of the body, nor how long it may linger out of the body after death. Nor do we know how long the body may have life after the heart has ceased to beat. Let us tell another true story which we happen to know, but is not told in the medical journals; we could give the name if required.

A very intelligent woman had given birth to a child and her life seemed to ebb and fail. It seemed to her that she had died and she felt, or seemed to feel, her soul peacefully escaping from her body, ready to pass out of the room. Then she thought of the child and the burden it would be to the father to rear it; and unwillingly, and with effort and pain, she forced her soul to return to the body. We do not assert that this was more than a sick fancy, but the experience was real to her and it suggests what may be real.

And read the Parsee Scriptures. They will tell you just how many days the soul lingers about the body, and how to facilitate its easy escape. So all peoples have believed that the soul is something different from the body, not an issue of the imagination nor a tissue of the brain.

THE STORY OF THE WEEK

The Death Struggle in Flanders

In this little corner of Europe, neglected by the tourist, among the sand dunes and canals, where sleepy villages bear names famous in song and story of the days when Flanders was among the foremost in wealth, industries and art, there have been gathered warriors from a wider range than made up Xerxes' army. Here are Sikhs and Gurkhas from India and beyond, under their tribal chiefs and maintaining in this strange land their dietary and religious customs; here are negroes from the Belgian Kongo and the French Gold Coast, and Turcos of Mohammed's faith from Algeria. The antipodes have sent the sons of colonists and exiles to fight under the Union Jack, and in the French Foreign Legion are adventurers and outcasts from every country. These millions of men, as diverse in their ideals and antagonistic in their personal interests as human beings can be, are enduring incredible hardships and daily risking their lives at the will of their commanders in a quarrel whose real purpose nobody is able exactly to define.

The pettiness of the tangible results obtained from day to day by these unprecedented exertions is best shown by the official bulletins. On December 5 the French Government made the following announcement:

> To the north of the Lys we have realized appreciable progress. Our infantry attacking at dawn took with a single charge two lines of trenches. The gain was 500 meters.
>
> A portion of the hamlet of Weidendreft, one kilometer northwest of Langemarck, remains in our hands. Before Poesele, halfway between Dixmude and Ypres, we have taken on the right bank of the canal a roadhouse over which there has been sharp fighting for a month. The enemy has tried without success by a violent attack of heavy artillery to force us to evacuate the ground we have won.

These are the victories of one day in this field; the gain of 400 yards, the holding of part of a hamlet, the capture of a ferryman's house. And the Germans had still less to boast.

From the rest of the line of battle in the West there is not much more to report for the week. The effort of the Germans to push forward north of Arras resulted in nothing more than the capture of the village and chateau of Vermelles, which they have had since to abandon. In Alsace the French claim to have made considerable advances.

THE GREAT WAR

November 30—Germans break thru Russian ring at Lodz. Deadlock in Flanders continues.

December 1—Russians come within eight miles of Cracow. Hard fighting in Argonne forest.

December 2—Austrians take Belgrade. German troops advancing from Sieradz toward Lodz.

December 3—King George visits seat of war and meets King Albert in Flanders. Boer General De Wet captured and taken to Johannesburg.

December 4—French invading Lorraine near Metz and Alsace near Altkirch. Germans lose Vermelles.

December 5—Italian Parliament approves Government's policy of armed neutrality. Russians claim gains in Armenia and Persia.

December 6—Germans take Lodz. Turks claim gains in Transcaucasia.

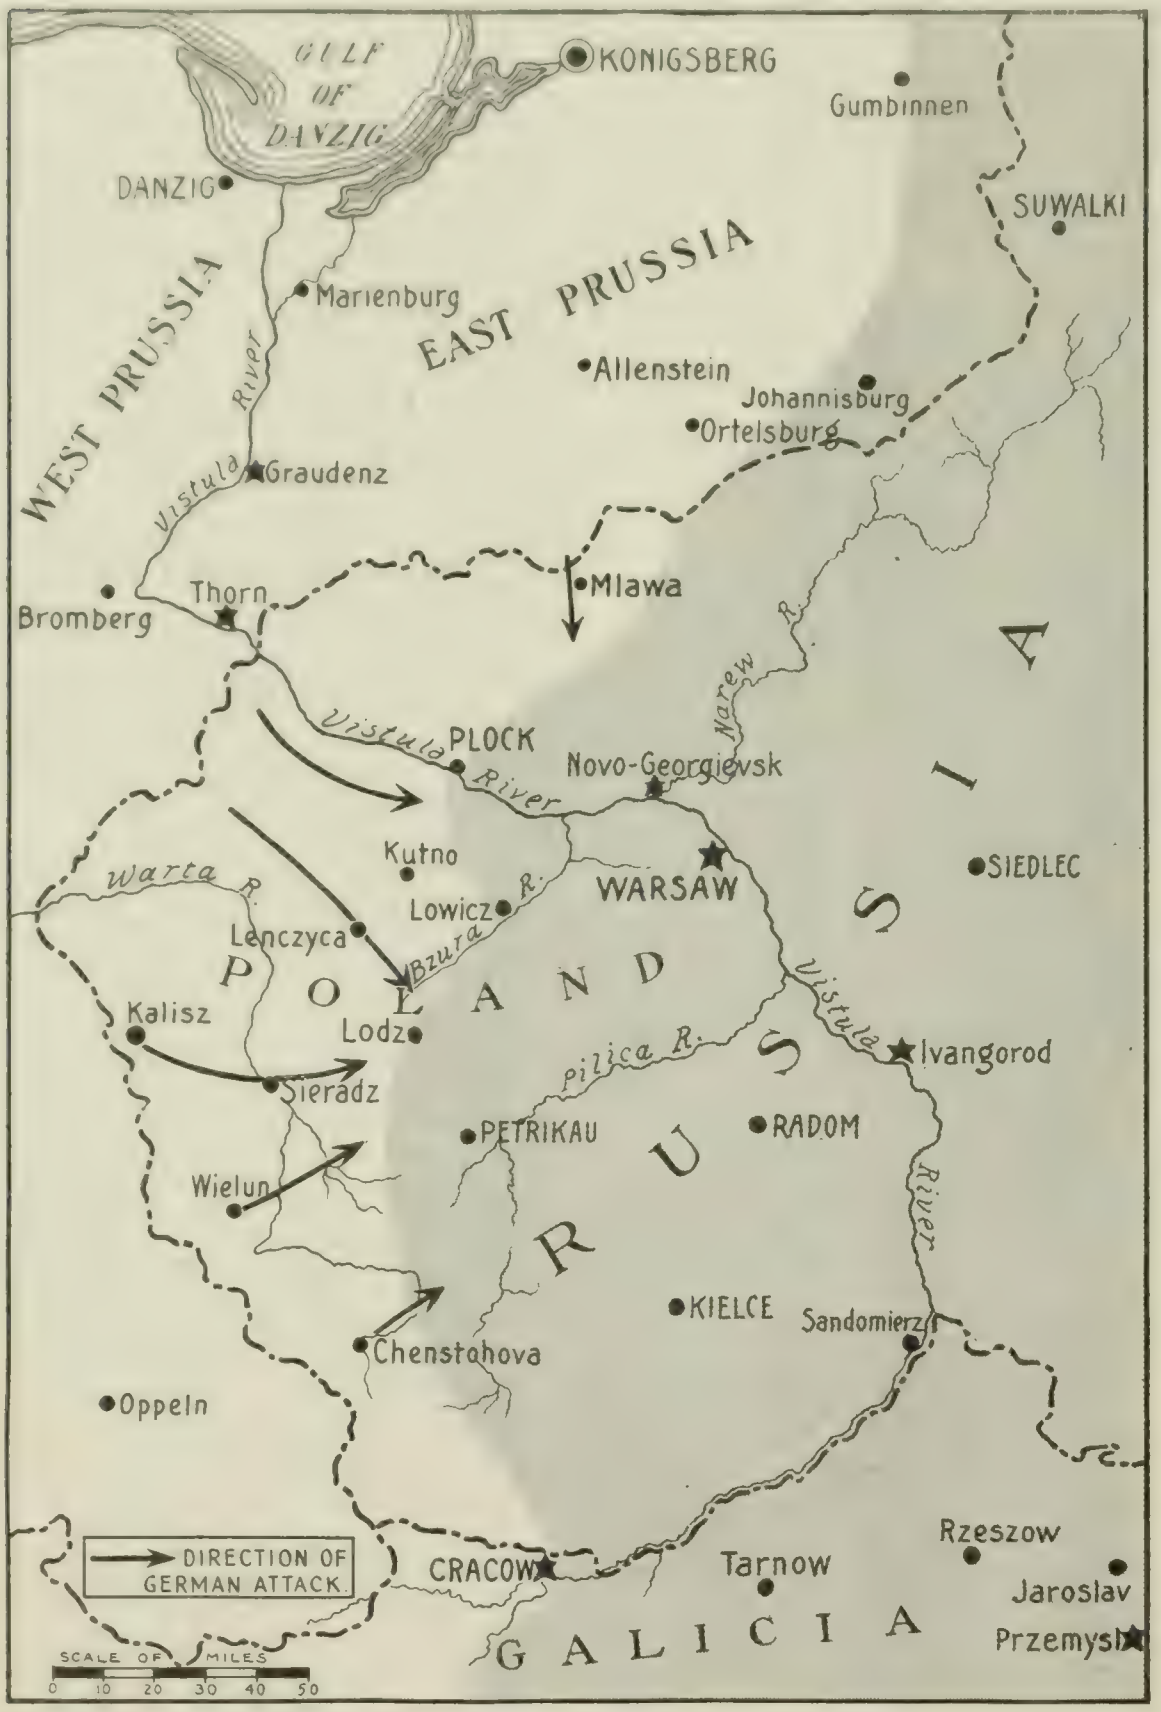
The Struggle in Poland

After three weeks of confused and conflicting reports, in which both Petrograd and Berlin claimed the victory and agreed on nothing except that the fighting was of the most terrific character, we can at last get some idea of the situation in Poland, altho it is impossible yet to say which has the advantage or exactly what has occurred. Unlike Belgium and France, where the lines are parallel and almost stationary, the movements in Poland have been rapid, and the troops so entangled that each side might well assert that it had outflanked the other and attacked it in the rear. The armies were in fact hooked together about Lodz and there is doubtless some truth in the claim of both the Russians and the Germans that they had cut off and captured large bodies of the enemy. The aeroplane and information service evidently does not work so well in Poland as in the west, where surprizes and ambuscades on a large scale are impossible. Consequently both sides blundered and got into untenable positions, but the other party was not able to take full advantage of the situation.

The statement issued a week ago from Petrograd that the army of General von Hindenburg had been caught in a trap proved to be premature and fallacious, but it might have been true if General Rennenkampf had not been two days late in bringing up his force at Plock to complete the Russian ring of steel which was being drawn around the German army. Because of this failure General Rennenkampf has been superseded. General Rennenkampf, who is now sixty-four years old, distinguished himself in command of the Fifth Siberian Corps in the Russo-Japanese war and was given a golden saber by the Czar. But his disastrous defeat in East Prussia by General von Hindenburg on August 23, when 70,000 Russians were taken prisoner, was a heavy blow to his military reputation, and now that he has twice allowed the Germans to escape his clutches his career is over.

The Battle of Lodz

Probably the hardest fighting of the war has taken place within the last month in the vicinity of Lodz and Lowicz, where the Germans are for the second time trying to force their way to Warsaw. The reports from Berlin have been brief and noncommittal. Those from Petrograd have been long and told of a continuous series of Russian successes, but since the scenes of these victories are continually nearer to the Polish capital, we may assume that on the whole the Germans have gained ground.



The second invasion of Poland began about November 6 by a simultaneous advance from north, west and southwest on lines centering on Warsaw. The army of General von Hindenburg, with its left on the Vistula, and General von Mackensen, with its right on the Warta River, made the greatest advance toward the common goal. By the 18th the Germans had pierced the center of the Russian line between Lodz and Lowicz, even got some fifteen miles beyond Lodz to the southeast. This latter detachment, being then inside the Russian front, was completely surrounded and the Russians thought they had it fast, but the Germans fought their way thru the Russian lines to the north and joined their comrades on the other side of Lodz. According to Petrograd accounts this was the bloodiest action of the war. In the thirty-six-hour fight the Germans lost nine-tenths of their officers, and many regiments had less than a hundred men left.

At the same time General von Hindenburg's army was attacked in the rear and left flank by a Russian force on both sides of the Vistula, near Plock. By gaining command of the river at this point the Russians were able to capture the steamboats which were carrying supplies up the Vistula to the German armies.

While the Russians from Lodz were trying to outflank the German right they were threatened on the other side by a German force which crost the Warta at Sieradz on November 29. This force had been brought by rail from Kalisz to Sieradz, where there are two bridges over the river, one for trains and one for wagons. The Russians occupying the hills and woods between Sieradz and Lodz endeavored to stop the advance of the Germans from this direction, but apparently without success. On the night of December 4 a German column about ten miles southwest of Lodz was attacked and dispersed by Russian armored automobiles carrying machine guns.

About twenty miles south of Sieradz another German army has crost the Warta from Wielun, and still further south an army under General Hötzendorf is advancing from Czenstochowa along the railroad to Petrikau.

Lodz was captured by the Germans on December 6, after a bombardment of several days. This is a thriving manufacturing city of about 500,000 inhabitants, half of them Poles and the rest Germans and Jews in nearly equal numbers. It is fifty miles from Warsaw.

THE ADVANCE ON LODZ

The second German invasion of Poland was made from six points. One army moved south from Mlawa. A second marched down the left bank of the Vistula from Thorn to Lowicz. A third went from Posen to Lodz. A fourth from Kalicz crossed the Warta at Sieradz. A fifth advanced from Wielun toward Petrikau and the sixth from Czenstochowa with the same objective. The arrows show the movements of the German troops. The shaded area represents the territory held by the Russians at the end of the first week in December

The Galician Campaign The Russians continue their steady progress westward between the Vistula River and the Carpathian Mountains. Petrograd boasts that the Russian army making this advance has had forty-five fights in forty-five days and taken 50,000 prisoners. Most of the towns mentioned in their march on Cracow have no meaning to us, but when it was announced that the Russians had reached Weliczka we remembered the pictures in the old geography of the chapels and statues and underground life of the deep salt mines here. This means that the Russians are only eight miles from Cracow and within gunshot of its outer fortifications, and the attack upon them may have already begun.

The Russian invasion of Hungary thru the Carpathian Mountains can hardly be regarded as a dangerous movement in the winter time, for the passes are high and difficult at best, but the political effect is considerable, for the Hungarians complain that their troops have been sacrificed ruthlessly in Poland and Galicia, and now their own land is left undefended. The Hungarian Premier, Count Tisza, is said to have gone to the Kaiser at Berlin and informed him frankly that he could not be responsible for the continued loyalty of the Hungarians under the circumstances, and that his Cabinet would resign unless something adequate was done for the protection of his country.

The Fall of Belgrade On December 2 the city of Belgrade, which was the first point of attack in the Great War, fell into the hands of the Austrians. There are two curious things about this; the first is why the city held out so long, and the second is why it should be taken now.

In the beginning it was not to be expected that the Servians, previously weakened by ten months of exceptionally bloody warfare, could hope to defend themselves against a fresh foe of more than ten times their number. Nor was it anticipated that Belgrade, tho famous as a fortress for a thousand years, would stand a siege more than ten times as long as Antwerp. The Servians themselves evidently despaired of holding their capital, so the government was removed promptly to Nish, a town of 25,000 population, a hundred and thirty miles into the interior and only thirty miles from the Bulgarian border.

The capital of Servia occupies a promontory jutting into Austro-

Hungarian territory at the junction of the Danube and the Save rivers. The Austrians therefore did not even have to shift their guns from their own forts to shell the city, and it was exposed on three sides to the fire of their river monitors. A large part of the 90,000 inhabitants fled from the city, but the garrison maintained a stout resistance to the last against both bombardment and assault.

More than this, the Serbs inflicted a disastrous defeat on the Austrian army which crost the Drina River from the west and then turned tables by invading Bosnia to within a few miles of Serajevo, the capital of the province. This was the time when the Austrians were straining every nerve in the vain attempt to check the onward movement of the Russians in Galicia. When the Germans relieved the pressure in this direction by their counter invasion of Poland, the Austrians were free to turn their attention to their southern foe and in a short time the Serbs and Montenegrins were driven out of Bosnia. Then the Austrians again crost the Drina, this time with greater success. A victory at Valievo, on the Kalubara River, forty miles south of Belgrade, enabled them to approach that city from the rear, and its western fortifications were carried by a bayonet charge. Most of the Servian troops had been previously withdrawn. General von Frank was enabled to telegraph the news of the capture of Belgrade to Emperor Francis Joseph on the sixty-sixth anniversary of his reign, and the victorious commander was rewarded by the Grand Cross of the Leopold Order.

According to Vienna reports, 19,000 Servian prisoners have been taken since the Austrians began the present offensive movement, and the Servian army, which numbered about 300,000 at the commencement of the war, has been reduced by fully a third. On the other hand, Nish claims that the Servian army has been reinforced by 40,000 new young recruits of eighteen and nineteen years of age.

WHAT IT MEANS TO YPRES

Balkan Situation Critical

It may well be wondered why the Austrians should be pushing forward the invasion of Servia with such energy just now, when they are being harder prest than ever by the Russians in Galicia. The country from which the Austrians were ignominiously driven in August they are now attempting to regain when the snow lies six feet deep in the valleys. The Serbs are capable of maintaining a guerrilla warfare in their mountain home for years; in fact, those of Montenegro were never really conquered by the Turks. There is no glory to be gained by the conquest of Servia. Why then should the Austrians undertake it at a time when their own capital is threatened?

The reason must be political rather than military, and exactly what it is must be left to the disclosure of events. For one thing, there is evidence that the Allies were preparing for an attack on Austria-Hungary from the Servian side. It is rumored that troops have been landed under the protection of French and British warships at Antivari, the sole seaport of Montenegro. These could be used for an invasion of Herzegovina or an attack on the Austrian port of Cattaro, just below the Montenegrin capital of Cettinje. On the other side of Servia, just west of the Bulgarian border, Russian troops have been landed, fifteen regiments of them, it is said, with seventy barge loads of ammunition and supplies. If so, they must have either been brought up the Danube five hundred miles from the Russian territory at its mouth, or have been shipped by rail across Rumania. In either case it means that Rumania has relinquished her neutrality and practically taken sides with the Allies. Take Jonesco, ex-Premier of Rumania, has telegraphed to the Constitutional Club of London that Rumania would certainly join the Allies, the only question being the precise date of intervention. The Rumanian parliament meets next week and is expected to vote for war. Rumania is anxious to share in the dismemberment of the Austro-Hungarian empire by the annexation of the adjoining territory inhabited by Rumanians, but this would hardly be possible if she remained inactive.

Bulgaria still bears a grudge against Servia for robbing her of a large part of her conquests in Macedonia and Thrace, and she would like nothing better than to take advantage of the Servian extremity to regain it. But this would subject her again to an attack from Rumania on the north and Greece on the south, from which she would be likely to suffer as severely as before. After her defeat in the second Balkan war, Bulgaria turned toward her former enemy and concluded a treaty of friendship if not of alliance with Turkey. The terms are not known, but if it provides, as has been suspected, for the transportation of Turkish troops across Bulgarian territory, it would account for the eagerness of Austria to get control of Servia. Once in possession of the railroad, which was built by Austrians, between Belgrade and Nish, it would be possible to send ammunition to Constantinople or bring an Ottoman army to Vienna, an ally this time, not, as in the days of John Sobieski, a foe. The Allies are exerting all their influence to reconstruct the Balkan League against Turkey, and Russia has sent Prince Troubetzkoy as Minister to Sofia in the hope of inducing Bulgaria to remain neutral or join the Allies.

Buying for the Armies

Exports are still increasing, on account of orders from the belligerent nations in Europe. The growth is so great that Mr. Pratt, chief of the Bureau of Foreign and Domestic Commerce, at Washington, permits publication of his estimate that $500,000,000 will be added to our shipments if the war continues for one year. This addition is to be caused wholly by war orders. One of the Government's special commercial agents reports to him that the manufacturers of machine tools alone have orders amounting to $10,000,000 or even $15,000,000, one large plant having work enough in sight for two years, night and day. Governor Walsh will ask the Massachusetts Legislature for a temporary suspension of parts of the labor laws of the state, in order that work on army contracts may not be delayed by restrictions relating to overtime and hours.

Mr. Schwab, of the Bethlehem Steel Company, who is making submarines for Great Britain (eight at the Union Iron Works, near San Francisco, and twelve at Fore River), was questioned by the State Department, which had the neutrality laws in mind. He then made a hurried journey to Ottawa, and after an interview with the Canadian Premier and Cabinet, sailed for London. It is reported that the remainder of the work may be done in Canada, or that the parts may be assembled in Montreal. Among the new orders are one for 50,000 steel gasoline tanks, to be used in making pontoon bridges, and another for 7,000,000 electric pocket lamps. There have been large purchases of zinc, exports for the last three months having risen to $4,143,381 from only $80,756 in the corresponding months of last year. Certain contractors, in association with the Lackawanna Steel Company, have undertaken to rebuild the bridges destroyed by the Germans in France. American steel will be used in this work.

Russia has ordered thirty locomotives at the Baldwin works. One old arms company, which has a large contract for rifles, is erecting an addition which will cost $1,000,000. Another will put up four new buildings. An order for 20,000,000 cartridges was placed in Lowell, where men are working on it day and night. Another, for rifles and revolvers, makes night work in Utica. One order for 600,000 swords is reported. A well known New York firm has just made a contract to supply 25,000 horses. It is difficult to find ship room for these animals. In addition to orders mentioned here last week may be noted new ones for 4,000,000 pairs of woolen socks; 1,000,000 blankets at $1 each; 2,000,000 pairs of woolen gloves; 9,500,000 yards of khaki; 250,000 suits of woolen underwear; 240,000 suits of fleece-lined cotton underwear; $4,000,000 worth of auto trucks; woolen cloth enough to keep several mills in Connecticut busy, and millions of horseshoes. A New Haven company has finished a large aeroplane which is said to be the first in filling an order for 200. Wheat is going out at the rate of nearly 10,000,000 bushels a week.

Paul Thompson

SIMPLE PATRIOT OR ARCH-MILITARIST?

The Crown Prince of Germany at the front (with the King of Saxony, to the left). He is generally regarded as the head of the war party in Prussia. In an interview recently given an American correspondent, he calls the war the most "stupid, senseless and unnecessary" of modern times, and denies the existence of a militaristic party

National Defenses

Representative Gardner, of Massachusetts, by public addresses and otherwise, has obtained the support of a considerable number of prominent persons for his pending resolution, which calls for a congressional inquiry as to the condition of our national defenses. Senator Lodge gives notice that he will introduce a similar resolution in the Senate. While congressional leaders who are in sympathy with the Administration are inclined to oppose any sensational investigation and to leave the matter to the regular committees, they realize that a debate on the question of armaments cannot be avoided.

The statements of Mr. Gardner and others as to the alleged inade-

Japanese in their campaign against Tsing-tau. A picture just received showing a spirited attack shortly before the fall of the fortress

quacy of the defenses and the unpreparedness of the military and naval forces have been the subject of several addresses and public meetings, and have drawn from Secretary Daniels a statement which is a defense of the navy and a reply to some of Mr. Gardner's assertions. At a meeting of prominent men in New York a committee of fifty was appointed and an organization, to be known as the National Security League, was formed, which will support the Gardner resolution and seek to promote an understanding of the condition to which it relates.

Employment of Aliens

At the recent election in Arizona there was a popular majority for a law proposed by the labor unions, providing that eighty per cent of the employees of any firm or corporation in the state must be natives or naturalized citizens. Many foreigners are employed in the mines and on the ranches and railroads. The law is not yet in force, but it is expected that the Legislature, following the popular majority, will enact it in January. Protests against it have been made at Washington by the British, Austro-Hungarian and Italian ambassadors, who assert that it is at variance with commercial treaties and our own national Constitution.

Protest may also be made by Japan. There are Japanese laborers in Arizona, and they are not regarded as eligible for naturalization. If Japan should complain, the controversy would closely resemble the one, still pending, between our Government and Japan concerning the alien land laws of California. Many Mexicans are affected, but a protest from Mexico is not expected. It is said that, because of the law, or of the popular approval of the bill, several hundred mine employees have been dismissed. The old question of the power and authority of the national Government with respect to the legislative acts of states is thus raised again. The protests have been brought to the attention of the Governor of Arizona by the State Department.

There is a similar controversy in the city of New York, where officers of a labor union have objected to the employment of aliens by contractors who are making excavations for the new subways. They point to a statute seventeen years old which says that only American citizens shall be employed upon public works. Because of this protest several hundred aliens have been discharged, and the number of those who may be affected is 18,000. Here, as in the Arizona case, it is asserted that the exclusion is at variance with treaties and the Constitution. By agreement between the Public Service Commission and the contractors, a civil suit to test the constitutionality of the statute has been begun by injunction proceedings, and there is also to be a test by a criminal suit, in which the secretary of the Contractors' Association has been held for trial. Meanwhile the construction of the subways of which the city is in great need is severely checked.

The Situation in Mexico

After Zapata took possession of the Mexican capital, some thought that he was not in agreement with Villa, who was not far from the city. But they were working in harmony, and in due time Villa entered the city, escorting Gutierrez, the convention's Provisional President, who went to the palace. Neither Zapata nor Villa remained in the capital, altho they were represented there by parts of their armies. It appears that while Carranza was there, his men were guilty of much looting. Zapata restored order. The Brazilian Minister, in a report to our Government, very warmly commends this bandit general.

Zapata put thieves to death, protected foreigners and their property, made no political arrests, sup-

A DIRECTORY OF EXPATRIATES

On the house walls here Belgian refugees who have fled to Holland have left word of their destinations, so that relatives and friends may follow them. The desperate shortage of food in Belgium continues, and trouble between the Germans and civilians is to be feared

ported the banks in their efforts to do business, treated the diplomats with due consideration, and made no forced loans. He collected one month's taxes, and with a part of the money repaid a loan voluntarily made to him by a bank. His soldiers, poorly clad and barefooted, gave no ground for complaint, except when, unfortunately, they killed eleven of the city's firemen. Alarmed by the clatter of a passing engine and by the shouts of those who accompanied it on their way to a fire, they attacked the fire company, believing that they were menaced by artillery and a revolutionist uprising. Villa narrowly escaped death on the train which carried him to the city. There was a railway collision and thirty-two passengers were killed.

Published reports said that Villa and Zapata quarreled, after the arrival of the former, but the dispatches of the Brazilian Minister and of the two special representatives of our State Department said nothing about any dispute. The two men were in conference about a new government. The twenty days' term of Gutierrez had expired. Zapata proposed that his successor, for a short term, should be Emilio Vasquez Gomez, who had for a long time been his favorite candidate, mainly because Gomez heartily supported his plan for a distribution of the great landed estates. Villa preferred Dr. Miguel Silva or General Angeles. He was unwilling, it was said, to be Minister of War, because he desired to remain in the field. He was to attack Carranza's forces in the vicinity of Vera Cruz. But the first attack there was made by a part of Zapata's army, and it was a failure.

Carranza visited several places not far from Vera Cruz, and asserted that his forces would easily overcome both Villa and Zapata, who, he predicted, could not work together. General Obregon, his leading military representative, sent to Washington and caused to be published a statement in which he accused Villa of attempting to assassinate Madero, of assassinating William S. Benton, and of killing Colonel Manzanero because the latter would not assist him in the recent convention. Villa, he added, had tried to bribe him (Obregon) and then had attempted to kill him, had stolen $2,000,000 from the national treasury, and was guilty of a long list of crimes.

New Movements in the North

When Villa led his main army southward, to drive Carranza from the capital, he left only a few small garrisons in the north. The beginning of a new revolutionary movement is now seen there. A few weeks ago General Ynez Salazar escaped from a jail in New Mexico, where he was awaiting trial for perjury. At first a follower of Madero, Salazar turned against him and became a guerrilla. Huerta made him a general. At the capture of Ojinaga he escaped and crost the border. He was arrested, on account of his connection with filibustering expeditions and the smuggling of arms. Now, with Emilio Campa, another Huerta general, he has set out to conquer the state of Chihuahua. Thousands who served in the Federal army have joined him, it is said. In a proclamtion he denounces Villa, Carranza and the Aguascalientes convention. It is reported that Pascual Orozco is buying arms for him in cities north of the boundary, and that he has ample financial support.

Bain

THE NEW WARDEN AT SING SING

Thomas Mott Osborne, whose appointment to take charge of New York's notorious prison marks a new advance in penology

At the same time General Herrera is recruiting an army to be used against Villa, and 2500 Carranza soldiers, under General Iturbe, have invaded Sonora. After two days' fighting they captured Guaymas, with its customs receipts, and then set out to take Hermosillo. There are indications that Villa and Gutierrez may lose the north. The Carranza garrison at Tampico has been reinforced and now exceeds 10,000 men. There are conflicting reports about the attitude of General Caballero, Governor of the state. Felix Diaz has been buying arms in New Orleans. He says he can have the support of 30,000 men. Great Britain has asked our Government to protect the interests of British citizens in the oil industry at Tampico and in mines elsewhere, and has complained that Carranza, at Vera Cruz, seizes cotton consigned to British mills.

General Maytorena has continued his attack upon the Carranza garrison at Naco, altho his Indians have left him on account of the cold weather. A shell burst near the custom house on the American side, last week, a teamster was killed in front of the American post office, and an American cavalryman was shot in the thigh. Thus far, five persons have been killed and forty-two wounded in the American city. The people of Arizona have sent protests to their Governor and to Washington. The repeated warnings of our military commanders at Naco to the belligerents have been ignored.

Hayti and Santo Domingo

The appointment, by the new Government in Hayti of a commission to seek recognition at Washington and assistance in procuring a loan, has been delayed, but it is expected that a proposition made by our Minister, Mr. Bailly-Blanchard, will eventually be accepted. Hayti is sorely in need of money. In the past she has been accustomed to look to Germany and France for financial aid, but at present they can do nothing for her. She has no credit elsewhere in Europe. It is understood that our Government's proposition involves such a fiscal protectorate as has existed for several years in Santo Domingo. President Wilson desires to end the revolutions which have paralyzed Hayti's industries and emptied the country's treasury. An agreement providing for supervision of Hayti's customs revenue by United States officers would insure recognition of the Government controlled by President Theodore, the successful revolutionist, and gain for that Government the loan which it needs.

A fiscal protectorate has not ended revolutions in Santo Domingo, but it promoted a kind of peaceful intervention which caused suspension of hostilities and led to an honest election. General Juan Isidro Jiminez, who had a popular majority, also gained, unexpectedly, a majority in the electoral college, and has been proclaimed President. The necessary action of Congress was delayed because the Opposition, having a majority, would not permit sessions to be held.

HOW PRUSSIANISM WARPS MEN AND WOMEN

BY THE AMERICAN WIFE OF A TITLED GERMAN

This article follows one by the same author in The Independent of November 16, 1914, on "Militarism in German Social Life," and is a second section of the indictment she brings against the military régime with which she became thoroly acquainted in her thirty years' life in Germany.—THE EDITOR.

CONSCRIPTION has been glibly advocated at times in England and even in the United States; let us see what it means in private life and trace some of its influence upon the everyday habits of a people.

In Germany, compulsory army service means a period of time spent in abject subordination to a new series of commands, on top of fourteen years of life past in subordination to parents, the pastor and the schoolmaster. Thus army service catches a man and puts him in a yoke again just in the years when a reaction might lead him away from restraint and toward liberty. Universal service means, furthermore, the subjection of the vast multitude of men to the few; to commands which it is not permissible even to question; to the instinct of obedience to inexorable authority, together with the concomitant idea that strict punishment does and should follow disobedience.

Obedience is made to appear respectable; disobedience, reprehensible.

Taken together with the old influences that still flow from the Prussian spirit of absolutism, this training explains how it has come to pass that Germans are so habituated to what may be described as alertness to infractions of every kind of prescribed regulation. Enter an empty doorway marked "Exit" or stroll over a bridge on the left hand pathway, and all the natives will stare at you or take pains to jostle you, so alive and resentful is every one to the fact that you are overlooking a rule. Leave a door open inside a railway coach, and the chance is that an indignant witness will tell you the regulations prohibit doors being left ajar, or he will report you to the conductor. Their zeal for obeying, and for seeing that everybody else obeys, would be phenomenal, I think, were it not to be accounted for by the fact of the military discipline the whole population undergoes or is infected by, after having been subjected to a previous course of discipline in the home, the school, the church and by the all pervading police. It is notable that this especial kind of zeal does not manifest itself in other countries subject to conscription.

Social Democrats alone, in Germany, ever seem to think of criticizing or questioning the necessity, the sense or nonsense of the restrictions that encircle the people, or who ever resist them.

The habit of unquestioning obedience, drilled into Germans during years of active service, renewed at intervals upon the maneuver fields, and witnessed all about them, causes the abstract constitution — formulated in forgotten, liberty-aspiring days—to be left quite out of mind. The sense of individual free action, indeed, would become atrophied among Germans under the present reign of Prussian militarism were it not for the existence of these Social Democrats, whom the Kaiser, as we know, is wont to call "the subversive element in the state." And as the event of war has proved, the doctrines of the Democrats are still intellectual principles that go under before the onset of temperamental forces. In other words, militarism has prepared its abode in the subconsciousness, the intimate habits of the race, by means of teaching and drill, from helpless childhood up, so that all opinions adopted in maturer years are as light as chaff when subjected to the impetus of emotional storms.

TALE-BEARING being compulsory in school and barracks, the reporting of infractions of regulations appears quite as characteristic of Germans as their phenomenal tolerance of prohibitions and their meek obedience to rules. The two, indeed, are complementary traits. It is the certainty of being reported that helps so much to stiffen the honesty of officials. Civil authorities, infected by the all-prevailing military system, of which they themselves have once been members, punish inexorably every infraction of a rule and every breach of trust by a subordinate. A policeman of a provincial town where I was visiting accepted an apology and two marks from a country gentleman for not reporting an involuntary infraction of a petty ordinance, and three days later was expelled from the service. A group of peasants, whose land the baron had hunted over, witnessed the scene and had reported both the officer and their noble neighbor.

Ninety-nine times out of one hundred, however, it is the police who act against individuals. Countless prohibitions arm them with the powers of corporals over recruits. "Soft gloves" are enjoined in respect of foreigners; yet by mistake, or from excess of zeal, it happens that foreigners, too, become acquainted occasionally with German minor militarism, as manifested in the martinet spirit of the *Polizei*.

An American lady washed a lace handkerchief, and had no sooner laid it upon the balustrade of the balcony of her room, in the third story of Pension Goeremann, in Dresden, when a loud knock at her door preceded the advent of a policeman. Pointing to the bit of lace, he demanded three marks as a fine, exposing washing on the street front being prohibited under penalty of a fine. I was fined a like sum for placing a flower pot on the outside ledge of a window, in order that the maid might clean the inside sill better. An American boy let off a toy pistol in the Hotel Europäische Hof, was heard, reported and fined. The arrest of an Englishman for throwing a cigaret paper upon the pavement, in Prager street, became almost an international scandal, for the doughty son of Britain appealed to his consul, wrote to the *London Times*, and held out stoutly against both arrest and fine. My coachman swerved to the left of the vacant Pirna road to avoid a puddle of water; was seen by a mounted policeman and held up. Volumes, I think, would not contain the record of similar incidents which fell under my attention during the thirty years of my residence in the Fatherland. Perhaps no one single thing marked the difference between my German friends and myself so much as the fact that while they accepted the trammels of such martinetism with docility of spirit, I never ceased regarding them as acts of petty tyranny.

THE Allies in the present war are amazed by the incredible number of proofs they come across disclosing knowledge on the part of the Germans, not only of their terrain and military forces, but of the personal affairs of residents in every city taken by the German troops. They are apt to attribute the knowledge to the work of paid spies. A student of the zeal I have been describing as a phenomenon of the daily life of Germans themselves will come, I think, to a more correct conclusion. While not doubting the thoroness and activity of the agents of the Intelligence Department of the great General Staff, he will attribute a goodly proportion of the Germans' knowledge to the reports of voluntary in-

formants. Reporting to the authorities has been encouraged in times of peace. It is then a German duty; in times of war it is an act of patriotism.

Individuals of every country feel the impulse to help their own; who can doubt the fact? But the Germans, in this particular, as in so many others, carry the impulse out more energetically, more efficiently, because better drilled and trained. Forty years' strenuous exercize of the Prussian policy of supplementing compulsory universal military drill by minute municipal and police dictation has made espionage and reporting German traits. The traits are of Prussian grafting, without doubt, for the old German nature was free of them.

ONE night, at a dinner party, upon our rising from table, my escort disappeared. I tarried at my seat in wonderment. The company past in a long file out into the drawing rooms. Of a sudden I became aware that I was isolated and alone in the great empty hall. Presently the men all returned in a body, approached and surrounded me, my escort in their midst. Their demeanor, while profoundly respectful, was both hostile and determined.

"Baroness, you did Judge R—— the honor of receiving him at supper last night," said old Count F——, their spokesman.

"Why, yes; he took supper with us," I replied.

"You are not aware, then, that the judge forsook the chairmanship of our Conservative club and announced his adherence to the National Liberal party?"

Ah! now I knew.

"The judge told us himself," was my reply. "Count, I understand by your addressing me here apart that you and these gentlemen no longer approve of him. But I pray you will not request me to cut his acquaintance so long as my husband does not command me to."

The reader must learn, in order to comprehend the contention I was putting forward, that a husband's will in Prussia represents the first law to a wife; which law society, having itself set it up, professes always to respect. Now my husband was absent that night on a hunt. The company had not thought of him and could not summon him to their aid. It was a dilemma for which they had not prepared themselves. After a moment they broke apart in silence. Count F—— made his bow; my escort offered his tardy arm; and another bit of Prussian experience was past.

Who had reported to Count F—— the visit twenty miles away of Judge R——? And how quickly had action followed upon the reporting—too quickly, as it turned out. As for the judge, he was reported to Berlin. There his name was put on the black list of the Government. Thenceforth his juniors on the bench enjoyed promotion over his head. Seven years he endured ostracism from society and government neglect. Then he surrendered, by returning to the advocacy of Conservative principles; whereupon ensued the long delayed promotion to a bench in a higher court, and the increase of salary which was needful to him in order to send his sons to college.

His was the story of the drill which many officials are put thru in the German Empire. And was not I, too, near being forced into line?

HOW the case may be in other countries that have been obliged by the example of Prussia to take recourse to conscription I do not know; in Germany it is a cause of anxiety, and sometimes of tragedy in just as many refined homes as there are boys of unintellectual tendency or feeble health. Military service, you see, calls for much manual, menial service, under inexorable taskmasters: scrubbing, scouring, and the like, in the infantry; cleaning of stables, fodder handling and the like, in the cavalry; and thruout, for every recruit of the line, a coarse companionship and a coarse grade of living. Hence a horror besets the soul of families lest such lads, by failing to pass the college-like examinations established for "volunteers," shall be grafted as common soldiers into this repulsive life.

How many times, when listening to laments of parents and seeing the hang-dog look of backward boys, did I say in my heart: "Never could I be so foolish and so cruel!" Yet within a few years I was seeing the same look in the eyes of my own feeble son, seeing him returned home ill from school, only to have his father stand at his bedside drilling Latin verbs into his fevered brain; the father himself a sufferer from haunting anxiety. For to be rejected by the military, on account of disability, remains a taint upon youth; and parents dread rejection as much as that other disgrace—relegation to the line.

If the fault of backwardness is due to mere mental torpor, the prodigious efforts and expense for coaching to which the family resorts generally enables the boy to pass somehow the prescribed examinations within the prescribed limit of age. He becomes a "one year volunteer," or subaltern. Life to him is then no longer an awful grind and bore. His robust constitution has saved him.

The long martyrdom of the sickly lad, who is sensitive in disposition, has, however, no such happy ending. The family prod and urge and encourage; and too often their attitude of unremitting solicitude adds the last straw of nervous strain. His best endeavors continuing to fall short of the prescribed tests, where the weak health and brain have a fatal accompaniment of pride and spiritual courage, the long struggle is abandoned; he spares himself and family disgrace by killing himself. The secret of the unusual number of suicides among proud lads in Germany is found in militarism.

Now, if army service were on the same footing as other services in the state, the shadow that hangs over so many homes would disappear. No family worries if a boy is not likely to be adaptable to the diplomatic service, or to the bench or the church. These services are not compulsory, and no suspicion attends upon a man known to have missed them. As things are, one and the same family may lift its head at the mention of a bad strong son, and sink it at the mention of a saintly one. As a consequence of the efforts made by the upper classes to spare their sons the shame of rejection from the service or of manual labor in it, an emphasized disapproval of what is weak has quite naturally spread thru all classes of society; the forms which this appreciation of the strong assume being sometimes pathetic, sometimes disgusting, and sometimes comical. Men hardly needed an institution, suffragists would think, to develop their self-complacency. Yet here—in universal army service—exists a great official aid to masculine self-assertiveness.

"BARONESS," General Loring once said to me, "I have always understood that German officers are gentlemen. Yet this happened to my nieces: two officers, encountering them in a narrow pathway thru a deep drift of snow, paused in the path, and pointing to the untrodden snow, exclaimed, 'Well, now!' and actually shouldered them out of the way into it! Can you explain such conduct?"

Indeed, it was easily explained. The officers had not recognized the American women as ladies. I was regularly pushed off the narrow sidewalks by the common soldiers of a garrison town I used to shop in, until I complained indignantly one day.

Angry at my having endured humiliation, my husband exclaimed: "It has been your own fault. When you meet the fellows, stop short and point to the gutter and command *'Herunter'* (down with you)! Which in future I did, the military-like formula acting like a miracle. One frightened glance and the warriors would be in the dirty runlets instead of me. Out of their uniforms they would not have dreamed of presuming. But "the king's coat" they wear encourages imitation of kingly ways, the first of which is vainglorious-ness.

In East Prussia I once overheard a Chief Staff physician who was doing service in a regiment of dragoons, venting his ire: "That's the third man this fall who has drowned himself in that meadow pool," he complained. "Captain D—— opened the letter he had written just prior to his going out on leave, and it said he was too unhappy to live. 'Unhappy!' *Donnerwetter!* What do the fellows want? The beer is good. And only a month ago we got them a new batch of fresh country girls for their use in town." But this subject of white slavery can only be touched upon. I cannot and will not leave it out entirely; because my object in writing these papers on the evils and the silliness fostered by militarism is to set our people thinking. I want them to know what conscription entails; what is covered by the "shining armor" of great standing armies; and why it is that men of experience and righteousness, accustomed to liberty, prefer death to conquest by Germany, where militarism most prevails.

As I was sailing down the Elbe one day, the clock in the tower church of a village which the boat was passing struck twelve. A young peasant couple laboring in a field looked up. As the last stroke ceased, the man threw down his hoe and sauntered to a dog cart waiting in a field road close by. Seating himself in the cart, he drew a pipe from his pocket and began smoking. The woman picked up his hoe, placed it beside him in the cart; then advancing to the front of the vehicle, she harnessed herself in alongside of the dog, and bending under their joint load, she plodded homeward. To me such sights were common. But one of a group of American passengers exclaimed aloud, saying: "Why, that big man is actually going to let himself be drawn by the little woman!"

"Madam," said a lady-in-waiting of Princess Matilda, who had boarded the boat at Pillnitz, "I think you must be American, to make such public, offensive remarks. In America you may neglect your men, having plenty of them. But here in Germany it behooves women to take care of their men. Our men are precious. *They are soldiers.*"

NEW NAMES IN FICTION

BY JEANNETTE L. GILDER

Miss Gilder is known to Independent readers as an experienced journalist and critic, the sister of Richard Watson Gilder. As editor and correspondent she has been connected with leading newspapers and magazines of the East, and she now writes for the Chicago Tribune. Her last article in The Independent, December 7, 1911, was called "Breaking into Literature."—THE EDITOR.

WE have had an unusually big crop of new writers since the last time I had the pleasure of writing for The Independent on that subject. A great many of these new writers were mere flashes in the pan, but a great many more have come to stay. I am speaking now particularly of writers of fiction.

The very latest of the new fiction writers is Edward C. Venable, whose first novel, "Pierre Vinton,[1] The Adventures of a Superfluous Husband," has attracted the attention of the discriminating. It is a remarkable first effort. The story deals with divorce, and it is as clever as anything that the late John Oliver Hobbes ever wrote. It is like some of her earlier work in its brilliancy and epigrammatic qualities. It is better than some of her later work because it is not as long drawn out as her full-fledged novels; it is more like her novelettes. Mr. Venable is not, I am told, new to the writing game. He is a journalist and practiced his profession in the columns of the New York *Sun*, which has always been a wonderful training school for writers. There he learned condensation, for no words are wasted in the *Sun's* columns. "Piere Vinton," while it has many a chuckle in its pages, has also that touch of pathos that sometimes goes hand in hand with humor.

Another new author, and one with a decided touch of humor, is H. M. Edginton, whose only novel that I have ever seen is the one published this fall called "Oh! James!"[2] It is the story of a man who believed in the goodness of the world and carried his belief to the verge of Quixotism. He has oodles of money which he wants to spend, but his wife, like Mrs. Gilpin of old, had a frugal mind and did not care about spending, so James set up four or five establishments in four or five different towns and got himself into four or five pretty bad scrapes, tho his attentions were honorable if his purpose was not marriage. The ladies in these cases did not know quite how to take him, but it turned out all right in the end and Mrs. James became a good spender. James not only believed in the good of the world, but in his own goodness, and expected every one to understand that his relations with the four or five ladies were purely platonic, as they were. The author of "Oh! James!" is an Englishwoman and is fairly well known as a writer of short stories. "Oh! James!" is, I believe, her first novel, but it will not be her last. It is one of the most amusing books I have read in many and many a long day.

MARJORIE BENTON COOKE
Her publishers aver that this is the only portrait of the author of "Bambi"

Quite a remarkable story by a new writer is "Peter Piper,"[3] by Doris Edgerton Jones. This author also is

[1] Charles Scribner's Sons, New York. $1

[2] Little Brown & Co., Boston. $1.30.

[3] G. W. Jacobs & Co., Philadelphia. $1.25

His Elian humor is a by-product of economics.

ANNE DOUGLAS SEDGWICK
The Encounter is written with beautiful art.

an Englishwoman, living in Australia, where the scene of the story is laid. It is more of a novel than "Oh! James!" and has many dramatic scenes and a plot that holds the reader from first to last. I understand that the story has been dramatized and will be seen on the stage before very long. It has the makings of a powerful drama.

Miss Caroline Lockhart has only published three novels, but she has made a flattering reputation with them. Her first book, "Me, Smith," was the most striking. Her latest, "The Full of the Moon,"[4] the most conventional, perhaps, but a pleasanter story than either "Me, Smith" or "The Lady Doc." "The Lady Doc" was not a pleasant story because the lady doc was not a pleasant person. She is at work on a new novel, which, like all that she has written, has its scene laid in the Far West. Miss Lockhart lives in Wyoming, when she is at home, which is very seldom, as she travels all over the western continent in search of adventure.

Cynthia Stockley, the author of "Poppy,"[5] does not write very cheerful tales, but they are unusually powerful. Mrs. Stockley is an Englishwoman who has lived much in South Africa and there the scenes of her stories are chiefly laid. She has a decidedly dramatic touch, but none of her books have ever seen the footlights. There was some talk of "Poppy" being turned into a play, but nothing ever came of it.

A young writer who writes exceptionally cheerful books is Marjorie Benton Cook, whose latest story, "Bambi,"[6] has had a sensational success. It has been dramatized by Hartley Manners, author of "Peg o' My Heart," and it stands a pretty good chance of making almost as much of a success as that "continuous performance," for "Peg" has been played steadily for the last two or three years.

A first book that brought its author fame and riches was "The Garden Without Walls,"[7] by Coningsby Dawson, who has recently followed up that success with another novel called "The Raft." "The Garden Without Walls" struck a new note and it pleased because of its charming sentiment and the very attractive qualities of its heroine. Mr. Dawson is an Englishman, the son of an English clergyman who happens to be living in this country. He was the literary adviser of a publishing house until "The Garden Without Walls" was published, and then, having discovered himself, he ceased discovering other writers. At present Mr. Dawson is on his ranch in Canada, writing a series of short stories for a popular magazine and working on a new book.

The foolish person who said that there were no humorous writers among the women novelists reckoned without Mary Roberts Rinehart, Josephine Daskam Bacon, Mary Wilkins Freeman, Edna Ferber, Carolyn Wells, the aforesaid H. M. Edginton and Julia M. Lippman. Miss Lippman has given a new character to fictionin "Martha By-the-Day," which has been followed in "Martha and Cupid."[8] Martha should be placed in the portrait gallery of American fiction very near "Mrs. Wiggs of the Cabbage Patch." Martha, like Mrs. Wiggs, was an optimist. She was also something of a philosopher and did a lot of thinking when she was on her knees—not praying—scrubbing.

Earl Derr Biggers is the striking name of a young man who jumped into fame with his first story, "Seven Keys to Baldpate," which was published perhaps two years ago and has in the meantime been turned into a successful play. Since then Mr. Biggers has published another novel called "Love's Insurance,"[9] which, while not as fantastic as Baldpate, runs along the same lines.

While Anne Douglas Sedgwick is not a new writer, she is new as a popular writer, for until "Tante" was published she had been caviare to the general. Editors and publishers and critics loved her work, but not the general public until "Tante" came, and then she jumped into the ranks of the "best sellers." Her latest book, "The Encounter,"[10] is a good story, written with beautiful art, and it will probably be lifted into popularity on the shoulders of "Tante," but it has not the striking characteristics of the latter. In her heroine's fluffy little mother Miss Sedgwick has created another living, breathing character. There are those who will like this story better than "Tante," but they will not be the mob. Miss Sedgwick is an American woman who has made her home in England, where she has recently married a Frenchman, Basil de Selincourt, who is also a writer.

A writer who has earned a reputation with one book, "Carnival," is Compton Mackenzie. He has now written a second one entitled "Sinister Street";[11] the name suggests the tone of the story. The hero

[10]The Century Co., New York. $1.30.
[11]D. Appleton & Co., New York. $1.35.

is Michael Fane, who was a student at Oxford University and who had many romantic adventures in London and later in Paris. Everyone who has read "Carnival" will know what to expect in "Sinister Street." Girls will read it as they read "Carnival," but it might be better if they would let it alone. I dare say that Mr. Mackenzie writes of life as he finds it, but it is not life as a great many other people find it, and this is most fortunate for the other people. He is a good story teller and knows how to make his readers sit up and take notice, but the world would be just as happy without "Sinister Street" as with it.

The late Pierre de Coulevain, altho she had written a great many books and good books, too, was not popular in this country until "On the Branch" was published Then she became a "best seller." Now she is dead and gone, and perhaps the most remarkable of her stories has just appeared. It is called "The Wonderful Romance."[12] It is an optimistic story, it was written from her heart, and she seemed to feel when she wrote it that it was her swan song. It was written with a purpose and with seriousness and yet there are smiles as well as tears in its pages. I will venture to say that the writing of this book meant more to the author than anything she had written before. "On the Branch" was more or less autobiographical and it was on the branch that she died.

An author with a lot of staying power in her is Mary S. Watts, whose latest book, "The Rise of Jennie Cushing,"[13] has perhaps in it greater elements of popularity than her previous stories. Mrs. Watts has been compared to Thackeray, but this is a foolish, or as Mrs. Malaprop said, "odorous" comparison. Mrs. Watts has a realistic touch. She develops her characters carefully, as did Thackeray. Hers are not novelettes, but full-fledged novels, and the reader gets his money's worth, for they are big books such as de Morgan writes and such as Thackeray, Dickens and Balzac wrote. If she writes of a family, she makes us thoroly acquainted with all its members. We get their point of view, she spares no detail. In this respect she is not unlike Mrs. Humphry Ward, that is, Mrs. Ward in her earlier novels, for in them she gave us the life history of her characters and she made it thoroly understood why they had such and such characteristics. Mrs. Watts is an American woman who was born and brought up in Ohio. She published her first book in 1908, which was not very long ago, and each succeeding book has placed her more and more firmly in public and critical estimation.

"Hallworthy Hall" is a new name in fiction. It is not a real name by the way; Harold E. Porter is the simple cognomen of the author, who being a Harvard man, took a Harvard name as his pen name. He wrote his first book, "Henry of Navarre—Ohio,"[14] only a very short time ago and it proved so popular that he was at once approached by editors of magazines to write serials. He is something of an editor himself on a home magazine controlled by his father. His stories are written with all the *verve* of youth; they are about college men, their games and their pranks. Mr. Porter has a keen sense of humor and tells a story well.

There has recently been developed a number of humorous writers along Lamb-like paths, for theirs is a gentle humor, among them Stephen Leacock and Simeon Strunsky. Leacock is the head of the department of political economy at McGill University, Montreal, and I imagine that he writes his stories and sketches for brain relaxation, for political economy and humor do not go hand in hand. Besides his "Literary Lapses,"[15] "Nonsense Novels" and other amusing sketches, he has published a book on "Political Science," but that was some time ago. His writings in a lighter vein have proved so popular that I doubt if he gives more time to political or any other scientific writing.

Simeon Strunsky is a Russian and a graduate of Columbia College. He has been a writer ever since his graduation, but not along his present line. He was chiefly a contributor to the International Encyclopedia and has also been an editorial writer on the New York *Evening Post*. His fun is not as uproarious as that of Stephen Leacock. In "Belshazzar Court"[16] Mr. Strunsky sees things as we see them ourselves —but we have not his gift of literary expression.

Julian Street has a humor of his own and in his latest book, "Abroad at Home,"[17] he gets a new angle on familiar scenes. There is a lot of information in the book, but it is dressed in such a light and airy manner that we do not realize that we are learning anything. We think that we are only being amused and there is where we are wrong.

THE EXPANSION OF OUR LATIN-AMERICAN TRADE

BY JOHN HAYS HAMMOND

In a question of trade and investment John Hays Hammond speaks with authority. His experience as a consulting engineer in all parts of the world—in Mexico, for instance, where his investments are very large, and in South Africa, where he was intimately associated with Cecil Rhodes—and in cooperation with large investors in London and the United States, has given him an unusual grasp of international finance.
—THE EDITOR.

UNTIL a few years ago our incomparable domestic market has been able to absorb the bulk of our manufactured products, but the extraordinary rapidity which has characterized the development of our industries has at last resulted in the saturation, as it were, of this market. This congested condition has been aggravated during the past few months' recent tariff legislation and the present closure of important European markets to our export trade.

It is for these reasons that strenuous efforts are now being made to expand our trade in new fields, especially in Latin America. But, lest we repent at leisure, it behooves us to exercize great caution and make haste slowly in connection with this undertaking. The opening of the Panama Canal has also given a stimulus to this movement.

While the Panama Canal will undoubtedly be very advantageous to this country in the development of commerce it will not affect our trade relations with Mexico, Central America, the West Indies and the northern and eastern states of South America, by far the most promising fields for exploitation, beyond the commerce that may be developed between our Pacific Coast states and the Latin-American countries to which I have referred.

The immensity of the area of the Latin-American states, aggregating nine million square miles (nearly three times as large as continental United States), with its population of upward of one hundred million, appeals to the imagination of our manufacturers and merchants, but there are important problems—engineering, social, economic and fiscal—to be solved before the potentialities can be realized.

Because of our geographic situation, and the advantages we have derived thru the investment of American capital and the influence of Americans in directing the development of important industries in Mexico, Central America and the West Indies, the United States has already become the most important factor in the foreign commerce of these countries.

We have made as yet no serious efforts to secure trade in South America and for that reason are at present greatly handicapped by the lack of banking facilities and in a lesser degree by the lack of speedy and direct transportation. We take from the ten South American nations only about one-fifth of their exports and supply them with less than one-sixth of their imports.

I wish to consider at this time the financial problem, which is by far the most important obstacle confronting us in our endeavors to expand our trade in Latin America.

Even before the beginning of the great European war many of the most important South American states were in desperate straits financially owing to their difficulty in meeting their obligations to the financial centers of Europe, from which they had borrowed large sums of money for governmental purposes and for industrial development. The war has, of course, added to the embarrassment of these states and has left them greatly crippled for lack of funds to prosecute the industrial and commercial developments necessary to establish for them adequate purchasing power.

It will be in all probability many years before Europe will be able to become again in any great measure the banker and broker of these countries, and it is, therefore, obvious that if we are to realize our ambition to secure a large increase in our Latin-American commerce our own capitalists must be prepared to render these countries financial assistance. But where are we to obtain the money for this purpose? Our country is itself a debtor nation, having borrowed from Europe the large sum of six billions of dollars. It is true that we shall be able to liquidate a large part of this indebtedness by the sale of our products to Europe; but where are we to get the money required for our own industrial activities if we undertake to finance Latin America?

Mexico will certainly require in the near future a further investment of large sums of American money to protect our investments in that country, which already amount to upward of three-quarters of a billion dollars.

In order to induce our capitalists to supply working capital to Latin-American countries they must be assured of the encouragement and cooperation of our national administration and of the guarantee of the protection of their investments against discriminatory laws and confiscation, especially in time of revolutionary movements. Our citizens must be assured at least of the same degree of protection that is guaranteed by other governments to their nationals. This does not by any means imply a truculent attitude on the part of our Government toward weaker nations—indeed, nothing would be more prejudicial in the long run to the interests of our citizens than such an attitude on the part of our Government. But cheap money is invaluable in the development of new industries, and cheap money can be obtained only by a guarantee of protection of invested capital against political exigencies.

To attain the confidence of investors and thus obviate the serious objections to investments in foreign countries, I believe a Pan-American Supreme Court should be created to deal specifically with disputes as to foreign investments in Latin-American countries. Such a court should be composed of the leading jurists of our own and of the Latin-American nations, and should sit in neutral territory. If inspired by self-interest only it would obviously be the aim of such a court to establish confidence in Latin-American investments generally, and for that reason foreign investors should be assured of fair treatment. Such a court might well be of one of final resort; in any event it should try cases and endeavor to adjudicate them before appeal thru diplomatic channels, which almost invariably results in friction and often in extreme tension.

Some such arrangement would, I believe, be well worth trying, as it seems to be in the interest of both the investor and of the country seeking the foreign capital indispensable to its industrial development.

Genuine, not merely professed amity, is a great asset in commercial relations, and since the larger South American nations (as they undoubtedly do) regard the Monroe Doctrine as supererogation on our part, it would seem good business, to say the least, to restrict the application of the Doctrine to such territory as is necessary for the defense of the Panama Canal and of our sphere of influence in the Carribean Sea area. As to the rest of South America, the Monroe Doctrine might well be superseded by a Pan-American defensive alliance against territorial aggrandizement on the part of European nations.

BOTH SIDES A DEBATE

MINIMUM WAGE LEGISLATION

RESOLVED: That laws for the establishment of a minimum wage should be enacted in the United States.

ALTHO minimum wage legislation has been an accomplished fact in Australia since 1896, and has been on trial several years in England, it was only during the legislative sessions of 1911-1912 that the first law was established in the United States. The Massachusetts Act was the first one to be enacted, and this provided for a wages commission which had the power only to investigate conditions and to recommend changes. Oregon was the second state to pass a minimum wage law; this law is of the mandatory type, the failure to pay a prescribed wage being punishable by fine or imprisonment or both. Nine states have now past laws for the minimum wage, including Washington, California, Colorado, Minnesota, Wisconsin, Utah and Nebraska. The Nebraska law is similar to that of Massachusetts, while the remaining states have followed the Oregon plan. Similar legislation has been attempted in other states, and the principle of the minimum wage has been endorsed by the Progressive party. Oregon's law has been upheld by the State Supreme Court, but in Minnesota the law has been declared unconstitutional and the Commission enjoined from proceeding with its work. The decision has been appealed. This brief was prepared by Edith M. Phelps.

ARGUMENT FOR THE AFFIRMATIVE

I. It is to the advantage neither of society nor of the individual that any considerable number of citizens should live below the level of normal and efficient life. Yet statistics show that nearly three-fourths of the workers of the United States receive less than a living wage.

II. Legislation for a minimum wage is the only available means of changing this condition of affairs. Effective organization of the great majority is impossible, and the automatic action of economic forces tends to degrade rather than to improve the condition of the workers.

III. Minimum wage legislation is reasonable and just.

A. It is not right that employers should take advantage of the conditions of supply and demand to pay wages that are not sufficient to maintain a decent standard of living. An industry that does not provide for the livelihood of its own employees is parasitic and its value to society is doubtful.

B. The argument that the state must not legislate in regard to wages is no more reasonable than in the case of hours of labor, child labor, and safety and sanitation in conditions of employment.

IV. Minimum wage legislation is practicable.

A. It could be applied at first to a few industries where wages are lowest and extended gradually so as to prevent any general disturbance of market conditions. If a slight increase of prices should result, it would be more than compensated for by the increased number of consumers.

B. Special provision could be made for beginners and for those unable, thru age or infirmity, to do a normal amount of work.

C. Such legislation has been successful. In the sixteen years that it has been in effect in Victoria, wages have gone up from twelve to thirty-five per cent, hours of labor have been reduced, and the actual number of persons employed greatly increased.

V. Minimum wage legislation would be to the advantage of

A. The worker. The ability to secure adequate food and shelter would increase his efficiency, and enable him to secure better wages and better conditions of employment. He would also be removed from competition with the unfit.

B. The employer. The just and fair employer would be relieved from the competition of the unjust and selfish employer. It would also increase the output of the workers, and promote better feeling between the employers and employees.

C. Society.

1. There would be a greater consumption of the necessaries of life, calling for greater production. This will increase stability and regularity of employment, and lessen poverty.

2. There would be a perpetual tendency to the selection of the best men for employment, which would tend to stimulate the workers to greater improvement.

3. It would have a tendency to eliminate the incompetent employer, and to stimulate the invention and adoption of better processes of manufacture.

4. It would remove the necessity for child labor and improve the conditions of women workers, all of which has a vital bearing on the future welfare of the race.

ARGUMENT FOR THE NEGATIVE

I. The agitation for a minimum wage law is unsound.

A. It introduces a new and unjustifiable basis of wages—that wages shall be based on what it costs the recipient to live. If this were the correct standard, there would be no reason for paying more than the minimum wage at any time.

B. The real remedy for insufficient wages is to provide means for increasing the industrial capacity of the workers.

II. Minimum wage legislation is unnecessary.

A. Natural economic causes are gradually eliminating the less favorable occupations.

B. The labor unions have already succeeded in raising the standard of wages.

III. Minimum wage legislation is unreasonable and unjust.

A. It would interfere with personal liberty in that it would prevent the worker from disposing of his labor as he wishes.

IV. It is impracticable.

A. The establishment of minimum wage legislation in any state would tend to attract workers from the surrounding states, and so make competition among unskilled laborers keener than ever before.

B. It has not been wholly satisfactory in Australia. The improvement in labor conditions may be ascribed not entirely to the minimum wage laws, but also to drastic factory legislation, and to better means of production enforced by the financial depression of 1894-5.

C. It has been exceedingly difficult to enforce where it has been tried, and would be more than ever difficult in the United States.

V. Minimum wage legislation would be greatly to the disadvantage of

A. The worker. It would have a tendency to reduce wages to a common level at the minimum rate, thus placing the burden of maintaining the unfit upon the more efficient workers, and discouraging individual effort. It would also tend to lessen the number of people employed, and would drive beginners and the aged and infirm out of employment.

B. The employer. Many of the smaller employers would be forced to go out of business or would have to combine for greater protection.

C. Society. Higher wages would tend to increase prices and increase unemployment, thereby putting a greater burden on charity than at present. It would tend to increase the immigration of unskilled workers. It would also hinder the moral and industrial development of the people, and would injure national prosperity by interfering with business.

A WOMAN'S WORDS TO WOMEN, CONCERNING CERTAIN DUTIES

BY AMANDA B. HARRIS

The writer of this article alleges that she is ninety years old—but we see no evidence of it in the article itself. She was for many years a most acceptable writer for young people, and one of the editors of the admirable children's magazine called "Wide Awake." Her charming home is under the shadow of Mount Kearsage in Warner, New Hampshire, where she and her sister Mary (the earliest teacher of the one who writes this note) were born, and where they still dispense a most gracious hospitality.—W. B. H.

A FEW years ago, Frances Power Cobbe published a small volume containing six lectures which she had delivered in London; and it was a compliment to her good sense and sagacity that it had such a ready sale, that not only women but many of the men who have a high reverence for womanhood heartily endorsed its leading opinions.

It cannot be said that the title, *The Duties of Women*, was very tempting to the sex in whose interest it was written, inasmuch as women have had their duties preached to and at them till they have cause for being weary of the sound. But after careful perusal, no sensible woman would be out of patience with Miss Cobbe; on the other hand, she would be grateful for some of her statements, and would accept them as among the eternal truths. With simple directness and absolute verity in the use of words, this author insists upon certain things as duties which no woman can honestly evade, and she compels attention as one by one they are set before us.

"But first," asks some one, "what manner of woman is Frances Power Cobbe, who takes such pains to say plain things and make us consider them?"

Since she has been an intimate friend of Theodore Parker, in sympathy with his views, and an advocate of beliefs not orthodox, many may have reached a foregone conclusion that she is an unsafe adviser; having long been a pleader for the extension of the suffrage to her own sex, she must to the conservative seem an ultra-reformer.

She states clearly her position. Early in life she was of the opinion that the happy duties of a daughter and mistress of a household, which fell to her lot, "together with village charities and literary and other pursuits, sufficiently filled up the life of woman, without adding to them wider social and political aims." Later her opinions underwent a change; and the exact process by which such a woman came around to her present stand would be a piece of intellectual autobiography worth having; but worth far more are the dignified and helpful utterances of one so sweet and refined, so wise and sound on other matters which vitally concern all women, and which are at the very foundation of character, integral forces in the moral nature. With her searching eyes she sees deeper and sees higher than suffrage, and recognizing the inestimable worth of certain moral qualities, she takes great pains to show us "how noble and brave and beautiful is the ideal of womanly virtue to which we are bound to lift ourselves up"; and this is the thread of gold running thru the book. She sets individual character as far above the mere question of suffrage as a true womanhood is higher than any "cause," as such, that women may engage in.

She must be shallow indeed who can read those "duties" without being stimulated to think soberly on subjects which she has never earnestly thought on before; she must be hopelessly dull or hopelessly frivolous who does not have her inward consciousness probed, and who does not come under the power of a purpose higher than her wont.

Courage, Truthfulness and Justice are three of the virtues on which the author places stress, as those which now women lack, "or have not enough learned to exercize." She deplores what she calls the "waste" there has been in their lives, "waste as regards the purpose either of their own moral growth or natural happiness, and waste of their faculties to make the world happier and better." Now in this sweeping clause does she not imply the finest compliment to the sex which has such power to shape human lives? Here is a woman of great intellectual breadth and resources, of wide observation, of mature judgment, with experience behind her, who says, as coördinate truths, that "love, tenderness, sympathy are immeasurably the best," and who has so exalted an ideal of fortitude, veracity and justice that she sees how the world may be moved by them, if the time ever arrives when women rise to their privileges and come into their kingdom.

"Personal duties," she says, "have supreme obligation, and must *never* be postponed to social ones," and the "truest and surest way in which we can serve our fellow men is, not so much to *do* anything for them as to *be* the very truest, purest, noblest beings we know how." It is the same lovely gospel preached by Ruskin in his *Sesame and Lilies*, it is the gospel of Paul, and of one greater than Paul. No new thing under the sun, but coming to us afresh and with significance that ought not to fail of potency with many.

With candor she discusses the possible contingency that in the new dispensation of more freedom, of a more public life (and presumably of what may result from the franchise), there is danger that some "now common womanly virtues be lost, without the attainment of any other moral gifts or graces," and she thinks that during "the great transition" women have a difficult and delicate course to follow, and that nothing their "opponents can do or say, nothing which all *men* united together could do, would really determine the character and results of the revolution."

The sum of all is, "First to set up God's kingdom in our own hearts, making them pure and true and loving, and then to make our homes little provinces of the same kingdom; and lastly to try to extend that kingdom thru the world." The greater is in the less, the less is in the greater. And home she sets in this high place —"the making of a home is really our peculiar and inalienable right—a right which no man can take from us, for a man can no more make a home than a drone can make a hive."

Warner, New Hampshire

THE WINDS OF GOD

BY CLINTON SCOLLARD

Across the azure spaces,
  Athwart the vasts of sky,
With winnowings of mighty wings
  The winds of God go by.

Above the meres and mountains,
  With unseen sandals shod,
Above the plains, with choric strains,
  Sweep by the winds of God.

"Peace!—in His name!" they murmur;
  "Peace—in His name!" they cry—
Oh, men, give ear! Do ye not hear
  The winds of God go by?

THE MOVING WORLD
A REVIEW OF NEW AND IMPORTANT MOTION PICTURES

UNNECESSARY RESTRICTIONS

THE chief obstacle in the way of the introduction of motion pictures into the church, schoolroom and home is the rigid regulation imposed by local authorities, such as the requirement of a licensed operator and the fireproof booth wherever the machines are used. These stringent rules were made in the days when celluloid films of a highly inflammable nature were the only ones in use and the halting of the strip for a moment in the glare of the electric light meant a conflagration of explosive violence, but there is no reason why they should be required where non-inflammable film is used, whether of standard size or not, or when the lantern light is of such low power as to be no more dangerous than the ordinary stereopticon. There is in fact no longer any necessity of using inflammable film at all and in fact most of the film used in Europe is of the non-inflammable kind. Doubtless in time the use of inflammable film will be prohibited by law in this country as well as in Europe.

The making and projecting of motion pictures has become so much simplified of late that it is already within the capacity of the amateur. Just as now every teacher can make his own lantern slides from negatives of his own taking and project them in his classroom at any moment that he finds convenient, so also he could utilize the motion picture for the illustration of industrial processes and animal life if it were not for the expense of apparatus and all of the restrictive regulations which are rightly imposed upon the theater. So long as it costs four or five hundred dollars to instal a motion picture apparatus and films have to be paid for at theater rates and an operator hired on union wages, it is impossible for the public to make the most of motion pictures as a means of education. There is of course much more money in the production of sensational drama in theaters than in renting films for the occasional use of teachers and preachers and it is no wonder that the theater managers are disposed to look with favor upon any means, including vexatious legislation, which will protect them from the competition of free movies in the church and school.

A PICTURE SERVICE FOR CHURCHES AND SCHOOLS

The many teachers and pastors who have written to us asking how they could obtain films for use in schools, Sunday school and week-day meetings will be interested to know that an organization has been formed for the express purpose of meeting this want, by supplying a weekly program of motion pictures of high moral and educational value. The organization is called the Church and School Social Service Bureau, Inc., and has its headquarters at 80 Fifth avenue, New York. Its president is Rev. William Carter, formerly pastor of the Madison Avenue Reformed Church of New York City, and its vice-president, Dr. Charles H. Parkhurst. Among its board of directors and advisory board are such men as Dr. Josiah Strong, Hamilton Holt, editor of The Independent, Dr. Francis E. Clark, founder of the Christian Endeavor Movement, Dr. John Grier Hibben, president of Princeton University, and Benjamin I. Wheeler, president of the University of California. If the plans of the Service Bureau are carried out they help very materially in making the movies an ally of educational and religious work.

BELGIAN WAR PICTURES

Among the most interesting pictures that thus far have come out of the war zone are those of *Belgian Battlefields*, taken by Edwin F. Weigle, staff photographer of the Chicago *Tribune*. Not only do they give an adequate representation of the devastation that has been wrought in Belgium, but in many instances Mr. Weigle has got close to the firing line itself and from a very close distance the spectator sees an actual battle in progress, shells bursting, men falling in the trenches, and the care of the wounded. The pictures were taken with the approval of the Belgian Government on condition that one-half the proceeds be devoted to the work of the Red Cross. Among the scenes presented are the destruction of Termonde and Malines, the burning of Antwerp, and the subsequent flight of the refugees into Holland. (*Popular Motion Picture Company, New York.*)

DR. WILLIAM CARTER
President of the Church and School Social Service Bureau

THE SEATS OF THE MIGHTY

Sir Gilbert Parker's great historical novel, *The Seats of the Mighty*, makes good material for the motion picture man. The plot is more sensational than the reader suspects, for in the book the skeleton is clothed in Sir Gilbert's fine descriptive passages. A film requires no scene shifters, so it is enabled to surpass even Shakespeare in doing away with the restrictions imposed by the classic requirement of "unity of place." We are literally taken "in a flash" from the court of France where Du Barry and Pompadour intrigue for the favor of Louis XV, to a Virginia plantation or the frontier stockade of Fort du Quesne. The object of the action somehow shifts from the search for the package hidden in an English castle to a struggle for a girl in Quebec and it never gets back so we fail to find out what became of love letters of the Du Barry, but we don't much care, for Alixe Duvarney is more interesting than any old papers.

The acting is good and great pains have been taken with the costuming and staging. The scenes that elicit most applause are of course the attack on Quebec by General Wolfe and the ascent thru the secret pass to the Plain of Abraham. These are admirably managed; still we must admit our American producers have much to learn from the Italians in the effective handling of battle scenes and crowds in general.

There has been great complaint from our Canadian cousins that American films exhibited there were all in glorification of the Star Spangled Banner and often at the expense of the Union Jack. But the Colonial Motion Picture Corporation has overcome this difficulty and produced a film that may properly be applauded on both sides the boundary since it shows the Virginian and the Yankee fighting under the British flag to free Canada from the French The only people in America who can be offended by this are the French people of the Quebec province. (*World Film Corporation.*)

A traveler penetrating to the heart of Asia was surprized on reaching Bokhara to be confronted with a moving-picture palace. A green poster in front of it announced that a striking comedy called the *Suffraget* would be presented there, followed by the tango. Thus the divergent extremes of the modern feminist movement meet in the ancient stronghold of Mohammedan orthodoxy.

THE HOLIDAY BOOKS

ILLUSTRATED EDITIONS

A Midsummer Night's Dream, by William Shakespeare. Illustrated by W. Heath Robinson. (*Holt. $5.*)

Good Oberon and all his fairy kingdom with Quina and Snug and Bottom, who go to make up the best of Shakespeare's fantasies lend themselves well to such a quaintly illustrated volume as this. Pen and ink drawings after the fashion of the decorative English landscape woodcuts, and water colors done in Copenhagen blue, make it of rare holiday charm.

A Poet's Cabinet. Selected quotations from the works of George L. Raymond. Edited by Marion Mills Miller. (*Putnam.*)

This bulky compilation will meet a hearty welcome in those rather selected circles where Professor Raymond's verse is known and enjoyed. Quotations, however, can do little to induce an author to new readers. Illustrated by early sketches of Howard Chandler Christy, drawn before fame had found him out.

The Poems of Edgar Allen Poe. Edited by Edmund Clarence Stedman and George Edward Woodberry. (*Scribner's. $2.*)

A substantial and well-groomed edition, with an introductory analysis—penetrating but none too succinct—of Poe's quality as a verseman, and with full variorum texts of all the poems in the notes.

Our Sentimental Garden, by Agnes and Egerton Castle. Illustrated by Charles Robinson. (*Lippincott. $1.75.*)

Sentimental truly, but full of the delights of an almost human comradeship found with the birds, and animals, the flowers and the bees which the authors have learned to know in the garden of their English home. The illustrations, however, in many places, mar rather than add to the volume's attractiveness.

Macaulay's History of England, edited by Charles Harding Firth, M.A. 900 illustrations, 44 in color, 6 vols. (*Macmillan. $3.25.*)

With the issue of the first four of the six volumes, it is possible to form an estimate of the work as a whole. The unusual opportunities offered the illustrator for supplying a pictorial accompaniment of Macaulay's narrative have been realized to the utmost. Many of the portraits have been secured from the National Portrait Gallery, while there is a wealth of engravings, caricatures, rare old prints, medals, maps, plans of places, buildings, sieges and battles.

The Works of Henry D. Thoreau, with introductions by Clifton Johnson. Five vols. cloth. (*Crowell. $1 per vol.*)

Especially quieting and refreshing during these times of world stress are these familiar papers grouped about *Walden*, *Cape Cod*, and the *Maine Woods*. They have been fittingly illustrated by Mr. Johnson with actual photographs from the haunts of the master.

The Vicar of Wakefield, by Oliver Goldsmith. Illustrated by Edmund J. Sullivan. (*Holt. $4.*)

Like Dickens's *David Copperfield*, the editions of Goldsmith's masterpiece are perennial. More than unusually handsome, however, is the present volume, and the many color plates which adorn it are of a beauty and delicacy rarely found, and do credit both to the artist and the publisher.

The Tale of Lohengrin, Knight of the Swan, retold in English verse by T. W. Rolleston, after the drama of Wagner, with decorations and illustrations by Willy Pogany. (*Crowell. $5.*)

The artist is a Hungarian possest of both imagination and skill, and the book is put forth by the publishers "as an example of the thoroly unusual in fine book making." It abundantly fulfils that description. The pictures and decorations are the main thing, the *raison d'être* of the book, and these are decidedly odd. Many of them are exquisitely beautiful. But for the most part their connection with the tale is not at all apparent; only a few recall incidents in the story.

ART

The Enchantment of Art, by Duncan Phillips. (*Lane. $2.50.*)

Beginning with those most difficult of all definitions—art and beauty—the author traces the growth and attempts to weigh the influence of Impressionism in modern painting, sculpture and literature. The cult of "Cubism" he regards rather as the extreme decadence of the Impressionist doctrine, than as the beginning of a new school. The book is full of keen estimates and genuine appreciations, but lacks in convincing power.

German Masters of Art, by Helen A. Dickinson. (*Stokes. $5.*)

The first attempt to present in English a complete and adequate history of the development of German paintings. A keen analysis of the essentials of the German and Flemish schools, with an admirable classification of periods that serves well the traveler and the student. Generously illustrated.

Luca Della Robbia, by Allan Marquand. (*Princeton University Press.*)

A complete and sumptuous Catalogue Raisonné of the works of the great and versatile Italian sculptor is this volume by Professor Marquand of Princeton University. The third of a series of monographs in art and archeology, beginning with the famous marble Choir Gallery, made for the Cathedral of Florence, the monuments are arranged in chronological order with the related documents and bibliography.

Indian Blankets and Their Makers, by George Wharton James. (*McClurg. $5.*)

Years spent among the Indians of California make Mr. James an authority on all things relating to Indian crafts. The Navaho designs are given in detail, and their meanings and the related customs and legends of the people so fully treated that the work is as valuable to one interested in the Indian himself, and to the folk-lore collector. There are over a hundred excellent illustrations.

TRAVEL

Clear Waters of My Heart, by Edward Hutton. (*Dutton. $2.25.*)

The first of a series of books on England, this being "Spring," and taking in Kent, Sussex and Hampshire, starting from the Tabard Inn, and following the steps of Chaucer's goodly company. But the England of the author's heart is far more churchly and Roman Catholic than Chaucer's pilgrims found it, or than it is now, four centuries after Henry the Eighth, a fact that constantly disturbs his happiness.

Bruges, a Record and an Impression, by Mary Stratton. Illustrated by Charles Wade. (*Scribner's.*)

The shrunken splendors of this old "Venice of the North," once the proud capital of Flanders, are here sympathetically set forth. Fortunately, altho occupied by the Germans, Bruges has not yet met the fate of Louvain or Dixmude.

Highways and Byways of Lincolnshire, by W. F. Rawnsley. (*Macmillan. $2.*)

More a glorified guidebook than a description of personal experiences or emotions in Lincolnshire. Conscientiously follows the main roads and the lesser; the architecture of the little parish churches, the old public buildings and the great cathedral, all are fully treated. The chapter on Boston is of especial interest to the New England reader. Charmingly illustrated as is the fashion of works of travel nowadays.

Westminster Abbey, by Helen Marshall Pratt. 2 vols. (*Duffield.*)

The history of Westminster Abbey is the history of England, says somebody, and in most complete and interesting fashion is it here set down. With the greatest pains the author has gone into the minutest description of the abbey and its tombs of the English great, together with all their associated histories and legends.

In Dickens's London, by F. Hopkinson Smith, illustrated in charcoal by the author. (*Scribner. $3.50.*)

Every loyal Dickensian will delight in Mr. F. Hopkinson Smith's new book of tribute, which is, in his own introduction, "in all humility not another book about Mr. Dickens with illustrations by the author, but a book of illustrations with some explanatory extracts from the Master's text, padded with some experiences of my own." The twenty-two pictures are excellent tint-block reproductions of Mr. Smith's facile charcoal drawings in which he has caught something of the velvet blacks, vapory skies, and streaming silver-washed streets of London.

The Lure of London, by Lilian Whiting. (*Little, Brown. $3.*)

A novel treatment of the city. Begins with a description of a function at Lansdowne House, then an account of the luncheon table decorations at Lambeth Palace, and some complimentary allusions to the social life in the Dean's Yard eke out the notes on Westminster Abbey. There is incidental reference to the Royal Institution, the art galleries, literature, to the theosophists; on clubs, societies, movements; and one page on sports and amusements. Hardly worth the trouble of the ocean voyage!

London Survivals: A Record of the Old Buildings and Associations of the City, by P. H. Ditchfield. With 114 illustrations by E. L. Wratten. (*Stokes. $3.50.*)

Like every other living city, London is ever changing; for change is inevitable when the pulse of life beats fast. Author and illustrator confine their wanderings mainly to "the City" itself, the demesne of the Corporation of London, wherein the changes wrought in the last half-century have been enormous. Yet within that restricted area they have found ancient and interesting remains in surprizing quantity.

The Charm of Ireland, by Burton E. Stevenson. (*Dodd, Mead. $2.50.*)

In the proper spirit did Mr. Stevenson journey to Ireland, and he took the right companion with him. Both were far more interested in risking their necks to

kiss the Blarney stone than in any number of social opportunities that the new Gaelic movement might open. No worshipers of the past were these travelers in Ireland, but very up to date, eager to learn all they could about the army in Ulster, and not finding half so much to learn about as they had expected. The book is fully illustrated with photographs by the author.

From the Log of the Velsa, by Arnold Bennett. (*Century. $3.*)

The "Velsa" is Mr. Bennett's yacht, on which he voyaged thru the canals of Holland, across the Baltic, to Copenhagen, along the Flemish coast, and finally into the gentle waters of East Anglia. The book is pleasantly illustrated, with a frontispiece in color by Mr. Bennett. The journeyings are described by the same light pen that he used for his chapters on America.

The Forest of Arden, with Some of Its Legends, written and pictured by George Wharton Edwards. (*Stokes. $4.50.*)

Makes poignant the regret that this fairy country, which Shakespeare chose as the setting for his "As You Like It," as outlined in our "Literary War Map," is now devastated in the path of war. Of the quaint villages with their heritage from a romantic past, which Mr. Edwards charmingly paints and describes, many are now only masses of blackened ruins. For this reason such volumes are sure to be closely treasured in the future.

Things Seen in Sweden, by W. Barnes Steveni. (*Dutton. 75 cents.*)

Mr. Steveni and Dr. Clark agree in the contention that Sweden is ill appreciated by the traveling public, and both write with an eager desire to make tempting to others what the authors have found so lovely. Mr. Steveni's small square volume, with its fifty full page pictures and its clear, large type, is just the book to tuck in one's handbag as one takes one of the lines he advises to Gothenberg, or the particularly easy railway trip Dr. Clark describes from Berlin to Stockholm.

The Charm of Scandinavia, by Francis E. Clark and Sidney A. Clark. (*Little, Brown. $2.50.*)

Dr. Clark, the founder of the Society of Christian Endeavor, and his son have preserved in two series of letters the impressions of several journeyings in Denmark, Norway, Sweden and Finland. These letters are absolutely impersonal, but the reader feels a little as tho there were much interesting matter hidden hopelessly between the lines that deal so exclusively with scenery, legend, history and national affairs. The accounts are full, with none of the formality of the guidebook. The illustrations are excellent and the book has what is always needed and seldom found in books of these types, that is, an excellent map.

CHILDREN'S BOOKS

Literature for Children, by Orten Lowe. (*Macmillan. 90 cents.*)

The more guidance the parent has on this important matter the better. Mr. Lowe is inclined to take an educational attitude, but his knowledge of the subject is thoro and his suggestions helpful. A large part of the book consists of an anthology of lyric poetry for memory work, and at the end the author has compiled a serviceable bibliography. Altogether a useful book.

Good Stories for Great Holidays, arranged by Frances Jenkins Olcott. (*Houghton Mifflin. $2.*)

The fact that this book has gone into its second edition before it is reviewed would indicate the demand for it. The selections are varied and well arranged, and while the editor is confident that there is material in her anthology for the young person to read, her chief intention is to furnish selections for the professional story-teller, and to encourage parents to have a "reading aloud" hour. The final pages contain a suggestive reading list.

JUVENILE CLASSICS

Andersen's Fairy Tales. Illustrated by Louis Rhead. (*Harpers. $1.50.*)

The Danish writer has never received better treatment at the hands of an illustrator. The hundred line drawings and decorations are dainty and full of imagination. W. D. Howells vouches for the excellence of Andersen in an introduction. Another satisfactory edition of the Fairy Tales is issued by Doubleday ($1.50). Dougald S. Walker's pictures being odd and quaint in execution.

Stories From Wagner, by J. Walker McSpadden. (*Crowell. $1.50.*)

The occasion for this reissue is the series of color illustrations by H. Heindrich and F. Locke. An introduction gives the sources and all necessary details regarding Wagner's life. The stories afford one a clearer notion of the operas than the commercial libretto. The general *format* of the book is attractive.

The Boy Emigrants, by Noah Brooks. Illustrated by H. T. Dunn. (*Scribner. $2.*)

One of the very best boys' books ever published. Written some fifty years ago, it is a classic, with all the freshness of a classic. Buy it by all means. Dunn's color plates are poetic and atmospheric, in the best Pyle tradition.

The Cuckoo Clock, by Mrs. Molesworth. Illustrated by Maria L. Kirk. (*Lippincott. $1.25.*)

Modern drawings always detract from the old-fashioned atmosphere of a story so long tested as this. The adventures of Griselda are as entertaining as ever. We would call our readers' attention to other volumes in the series, "Stories All Children Love." They are all excellent.

The Golden Age, by Kenneth Grahame. Illustrated by R. J. E. Moony. (*Lane. $3.*)

Nice wide margins in the midst of which flows the clear typography of a gem of recent literature. Older people will relish this book, and some old young people. The cover design far exceeds the garish illustrations in the dream quality which is so characteristic of Mr. Grahame's text.

Myths Every Child Should Know. Edited by Hamilton Wright Mabie. Illustrated by Mary Hamilton Frye. (*Doubleday. $2.*)

A large edition of a book that had wide sale when it was first issued. The stories from Kingsley, Hawthorne, Church and others never grow old. No modern theories can crush juvenile interest in mythology. The artist's silhouette sketches are better than her color work, imitative of Walter Crane.

Uncle Remus and His Friends, by Joel Chandler Harris. Visitor's Edition. (*Houghton Mifflin. $1.25.*)

An introduction gives much personal data relating to the author's life in Atlanta, and the reproduced photograph picture his home and farm, where Uncle Remus was created. Such negro folk lore as this book contains is destined always to be among the most distinctive contributions to American literature.

The Boys' Motley, by Helen Ward Banks. (*Stokes. $2.*)

This is not an editing of the original, but the author, taking Motley as the source of her knowledge, tells the story of Holland's struggle for freedom in her own language. Each chapter is a play in itself, with a cast of characters. The style, however, is narrative and not in dialog form. Pictures by A. D. McCormick add dramatic settings of vivid color.

Legends of King Arthur and His Knights, by Janet M. Clark. (*Dutton. $2.50.*)

Another version of the Arthurian cycle, and an excellent introduction to Tennyson or to Pyle's series of chivalric tales. After reading this the child might be given parts of Lanier's *Mallory*. The illustrations are adequate. There is a rich cover design.

The Story of Greece, by Mary MacGregor. (*Stokes. $2.50.*)

A rich, thick volume giving us the mythology and stirring history of ancient days. This is an excellent introduction to all we deem classic in Greece. There are included nineteen color plates done by Walter Crane.

SOLDIER STORIES

The Boys' Book of Battles. (*Houghton Mifflin. $2.*)

A splendid anthology, giving in prose and verse, descriptions of victories and defeats which constitute epochs in history. There is no mention of the present conflict, but the historical pictures reproduced help to glorify past struggles. Even lovers of peace cannot but thrill over records like these.

Boys' Book of Famous Regiments, by H. A. Ogden and H. A. Hitchcock. (*McBride. $1.50.*)

The individual soldier may never have his name preserved, but he may bring glory to the regiment in which he serves. History is filled with the fame of certain bodies of fighting men in every country. These brigades, battalions—whatever you call them in France, Germany, England, Russia, the world over—are described by Mr. Ogden, so well known as a designer of military uniforms. A chapter on "Some Regiments of Europe in the Great War of 1914" gives this little volume timely bearing.

The Last Invasion, by Donal H. Haines. (*Harpers. $1.25.*)

A prophecy that some day in the future the United States will be attacked by a Blue Army, secretly landed in the North and in the South. At first, according to this fiction, we will be worsted, but in the end we will gain a sweeping victory, partly due to the fictitious heroes who go thru exciting adventures for the benefit of omnivorous readers of the present.

The Story of Our Army for Young Americans, by Willis J. Abbot. (*Dodd Mead.*)

This is not a discussion of what our army has been composed of during our existence as a nation, but it is a graphic rewriting of our great wars and the men who conducted them in 1775, 1812 and 1861. Then there is a casual description of our Spanish conflict. Boys will relish the text.

FAIRY TALES AND FOLK LORE

Black Tales for White Children, translated by Capt. C. H. Stigand and his wife. (*Houghton Mifflin. $1.50.*)

These are what the translator calls Swahili stories, and a foreword tells of the folk who have preserved the fables by word of mouth thru the ages. The jungle atmosphere dominates both the text and the excellent thumb-nail marginal sketches by John Hargrave.

WORTH WHILE READING

By the author of "The Happy Warrior"

The Clean Heart

By A. S. M. Hutchinson

The author's finest achievement, a most appealing story with the happy ending which "The Happy Warrior" lacked. $1.35 net.

The Charm of Scandinavia

By Francis E. Clark

A delightful travel book full of the history, sports, folklore, and description of the Scandinavians. Illustrated. 8vo. $2.50 net.

Little, Brown & Company, Publishers, Boston

Imagina, by Julia Ellsworth Ford. (*Duffield. $1.50.*)

A glaring example of how *not* to write a story for children. There is no coherency in the construction of the adventures which befell a lonely boy. Mrs. Ford has called in the assistance of Percy Mackaye and Witter Bynner, who have contributed some poor verse, while Arthur Rackham's color contributions are far above the imaginative quality of the story. Lauren Ford's line drawings are creditable, and the book making is good.

The Lucky Stone, by Abbie Farwell Brown. Illustrations by Reginald Birch. (*Century. $1.25.*)

A wholesome little story narrating what happened to an imaginative girl who leaves her slum quarters for a vacation in the country and meets with a fairy princess. There is a mystery, and the little girl has a delightful experience with fever, and in the end, there is a romance! What more can one require in a good holiday present like this?

The Book of Friendly Giants, by Eunice Fuller. (*Century. $2.*)

Pamela Colman Smith's drawings are not more delightful than this collection of stories written in defense of giants. After reading the book, the nursery will have to revise opinion regarding the viciousness of giants. They are the cosiest kind of creatures, in their large way, and in the instances here given are every bit as considerate as fairies!

The Diamond Story Book, selected and edited by Penrhyn W. Coussens. (*Duffield. $1.50.*)

There is much rich matter in this thick volume, but we fear children will be frightened by the solid pages of type. The editor has given a generous range of stories from all countries, including some authors we know, and even if the children do not wear the book out with handling, the professional story-teller should thank Mr. Coussens for an admirable compilation.

Fairy Tales of Eastern Europe, by Jeremiah Curtin. (*McBride. $1.50.*)

Mr. Curtin was the translator of *Quo Vadis*. The present volume is posthumous and comprizes folk stories and fairy lore from all of the countries now at war, barring England and Germany. The author's varied foreign experience gave him an expert's knowledge of his subject. But these tales show no scholarship; they appeal strictly to the imagination.

In Fairyland. Tales Told Again by Lucy Chisholm. (*Putnam.*)

All of our old favorites from Perrault, from Old England, from Grimm and from Andersen are adapted to the needs of the young person. Every adapter has particular ideas regarding those needs—that is why we have so many versions of *Red Riding Hood*, instead of relying on the "awful" one. Katharine Cameron's pictures are adequate, however poor the drawing.

Stories We Love Series. (*Stokes. Fifty cents.*)

This series is attractively issued, with color plates and black and white drawings. Among the volumes this year are Irving's *Rip Van Winkle*, well illustrated by Robinson; an attractive issue of Grimm's *The Ogre with the Three Golden Hairs; Sindbad the Sailor;* Mark Lemon's *The Enchanted Doll* and Ouida's *Moufflou*. The cheapness of the volumes is indication of the fact that agreeable and artistic books can find their way into the homes of every one.

PICTURE BOOKS AND RIMES

Songs of Sixpence, by Abbie Farwell Brown. (*Houghton Mifflin. $1.25.*)

A varied and sweet collection of verse for different ages. There are some senti-

ments that will please grown readers, but the majority of poems show Miss Brown to be particularly in sympathy with the child world. As example of the older verse, we like the splendid "Foreword"; and as a type of juvenile appeal we recommend "The Little Corner Store."

Pleasant Surprises: A Novel Picture Book, by Sheila E. Braine. (*Dutton. $2.*)

The verses are very mild, but explain the mechanical change in scene of the color pages. By means of a little string the pictures are shifted in kaleidoscopic manner. Thus there are two picture books in one.

Stokes' Wonder Book. A Picture Annual for Boys and Girls. (*Stokes. $1.50.*)

An importation, with the usual contents assortment, printed in brown and green. Personally we would recommend in preference bound volumes of *St. Nicholas.*

The Baby Bears, and Their Wishing Ring, by Grace G. Drayton. (*Century. $1.*)

There are many pages of pictures in this oblong book, with two little bears as hero and heroine. They fall into all kinds of mischief, and in many adventures prove themselves to be very helpful and resourceful citizens.

The Dot Book, by Clifford Leon Sherman. (*Houghton Mifflin. $1.*)

A splendid book for a party or for a daily treat with a pencil. By drawing straight lines between numbers in their regular rotation, from one to a hundred, the most startling and amusing pictures may be drawn without the slightest effort. The reviewer had great fun with it.

Dutton's Holiday Annual. Edited by Alfred C. Payne. 27th year of publication. (*Dutton.*)

Nothing can take the place of the familiar "Chatterbox," but the present volume contains the usual illustrations, stories and verse. The cover is wintry. This is an English production printed in Bavaria!

The Kewpie Kutouts, by Rose O'Neill. (*Stokes. $1.25.*)

There are numberless pages which can be snipped out with scissors and then made into the most alluring dolls for tiny girls. The verses are a strange combination of inane story with difficult wording. But each adventure is saturated with moral sauce.

Old Time Nursery Rhymes. Illustrated by Gordon Robinson. (*Dutton. $1.25.*)

The line drawings are very agreeably done, and would have shown to better advantage on supercalendar paper. The rimes are just as splendid as ever. Fortunately no verse moralizer has attempted to edit Mother Goose!

HEROES AND HEROINES

Alexander the Great, by Ada Russell. (*Stokes. Seventy-five cents.*)

This is one of a biographical series called "Heroes of All Time." The design is altogether commendable, and historical facts seem to be handled with care and authority. Other volumes thus far issued are: Augustus, Alfred the Great, Jeanne d'Arc and Sir Walter Raleigh.

Washington, the Man of Action, by Frederick Trevor Hill. Illustrated by J. Onfroy de Breville. (*Appleton. $1.*)

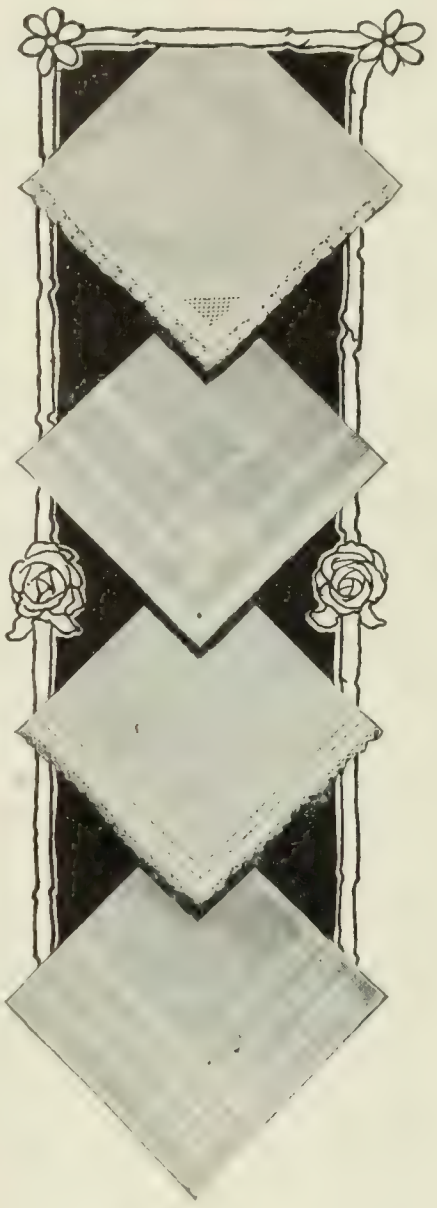
A book calculated to stir the patriotism of young Americans. Very readable and illustrated by forty-eight full page drawings done in the French fashion without margins.

Boy Kings and Girl Queens, by H. E. Marshall. (*Stokes. $1.75.*)

This is a very excellent collection of historical sketches which should have great appeal to young folks. One never tires of

Handkerchiefs for Christmas

THE war has made practically no difference in the variety and abundance of our stocks and our Christmas assortment is as ample as ever this year.



From Madeira
Exquisite Hand-embroidered Handkerchiefs of sheer linen with the characteristic and unique scalloped edge and eyelet work, at 25c to $2.50 each.

From France
Handkerchiefs daintily trimmed with real laces and fine embroideries, at 50c to $100.00 each.

From Armenia
Beautiful, delicate Handkerchiefs with self-lace edges, at 50c to $1.50 each. Some of these also show hand-embroidered initials in the corner.

From Switzerland
A collection of very attractive Hand Embroidered Handkerchiefs in a wide range of designs, at 50c to $2.50.

From Ireland
comes the great bulk of the plain, practical, everyday Handkerchiefs, with initials, lace trimmed and embroidery. Most of the Men's Handkerchiefs are Irish and it is astonishing how many variations there are at 25c, 40c and 50c each. Illustrated *Handkerchief Booklet free on request.*

ROOMS BREATHE

When equipped with Van Zile Air Deflectors. This is the sound principle on which this simple and inexpensive equipment is built and installed.

45% repeat orders from 600 installations since February is convincing proof of this fact.

THE VAN ZILE VENTILATING METHOD

Distributes fresh air evenly without causing drafts or cold zones. The first cost is the only cost; your initial expense permanently assures your comfort, health and efficiency. The necessary 2,000 cubic feet of *fresh* air per hour per person can be diffused in *your* establishment, be it Office, Factory, School, Hotel, Hospital, Theater, Church or Public Building.

We positively guarantee results.

Survey and analysis without cost or obligation.

Write—further information will interest you.

VAN ZILE VENTILATING CORPORATION

41 Cortlandt Street, New York City

hearing the romantic adventures of tiny inheritors of a crown. Events move faster than the press sometimes; strange to see an English writer speaking of "Germany our constant ally."

Little Women Letters from the House of Olcott, selected by Jessie Bonstelle and Marian de Forest. (*Little, Brown. $1.25.*)

Tho dealing with the entire family, this book is inspired by interest in Louisa. The editors have not done a thoro piece of work; their own attitude does not seem as sincere as the attitude of the family of which they write. The letters quoted, especially from Mrs. Alcott and the children, have the real "Little Women" quality about them. Not intended strictly for juveniles, this book will find many a young reader, who can skip the quotations from Mr. Alcott's journals.

More Than Conquerors, by Ariadne Gilbert. (*Century. $1.25.*)

The title of this book would lead one to think the moral tone predominates. That is not so. The author has been an excellent reader of biography, and she makes such men as Scott, Lamb, Emerson, Brooks and many others live thru accentuation of their homely characteristics. The human side of these sketches is splendid.

When They Were Children, by Amy Steedman. (*Stokes. $1.50.*)

It is a good thing to think sometimes of the childhood of great men. There is not one, from early days to the present, who did not have a beginning! The boyhood of Tennyson, the girlhood of Queen Victoria, the boyhood of Saint Augustine, the girlhood of Saint Catherine, what young reader would not enjoy such an account! This is a rich volume dedicated to youthful days.

SPORTS AND CRAFTS

The Boy's Camp Book, by Edward Cave. (*Doubleday, Page.*)

Especially fitted for the Boy Scout. In fact, the data is based on observation of the annual encampment of a Boy Scout Troop. Herein are given directions for every emergency while in camp, from an examination of the camping ground to a handy and important chapter on cooking. Concise and practical.

Children's Parties, by Gladys B. Crozier. (*Dutton. 50 cents.*)

This is one of a series of three volumes giving simple and varied suggestions on a subject of importance in the home. It is intended for the parent, teacher or librarian around holiday season. The other books are: *Children's Outdoor Games* and *Children's Indoor Games.*

The Book of Athletics, by Paul Withington. (*Lothrop, Lee. $1.50.*)

This is sure of a warm welcome. The many chapters are written by amateur experts in the field of sport, and the editor is a Harvard man of varied prowess. The book is healthy in tone and a splendid guide. There are interesting reproductions of photographs.

Indian Scout Talks, by Charles A Eastman. (*Little, Brown. 80 cents.*)

If one should follow this guide, one would soon begin to doubt that he was a white man, so complete would be his mastery of the warrior's ways. The author, an Indian himself, puts the reader into possession of many Indian characteristics of value to the Boy Scout and to the Camp Fire Girl.

The Boy Electrician, by Alfred P. Morgan. (*Lothrop, Lee. $2.*)

Such a book is a menace to the business of the neighborhood electrician, for it strives to teach the average boy all sorts of things his mother would like to have done about the house in a mechanical way. The index is measure of its good scope.

The Handy Boy, by A. Neely Hall. (*Lothrop, Lee. $1.60.*)

The publishers advertise this volume with two words, "practical" and "profitable." That is true. Such a book puts the idler to shame and makes the young carpenter resourceful.

Harper's Book for Young Gardeners, by A. Hyatt Verrill. (*Harpers.*)

All that the young person wants to know about things that grow in the ground is described in this manual. It is just such a book as the schools will welcome, and out in the country the youngster should become expert under its tutelage in a short while. The illustrations are plentiful and graphic.

The Boys' Book of Astronomy, by Ellison Hawkes. (*Stokes. $1.75.*)

A popular treatise, which will be an excellent guide to children wherever they are with a sky above them. The wonders of the sun, moon and stars are graphically described and modern astronomical discoveries are emphasized. There are copious illustrations thruout the book.

The Boys' Book of Stamp Collecting, by Douglas B. Armstrong. (*Stokes. $1.75.*)

A fascinating treatise on a fascinating subject, in which the romance of special stamps are described, and there is an interesting chapter on King George as a collector. All the information one should know about the science of collecting is given compactly and entertainingly.

FICTION FOR BOYS

The Boy With the U. S. Explorers, by Francis Rolt-Wheeler. (*Lothrop, Lee. $1.50.*)

The United States Department of Agriculture has loaned the pictures for this volume. Thru the efforts of the hero, his father's farm becomes an experiment station. Startling adventures are mixt in with scientific pursuits.

The Boy with the U. S. Indians, by Francis Bolt-Wheeler. (*Lothrop, Lee. $1.50*)

Exciting pictures lent by the United States Government add snap to the text, which describes the Indian as he was and is. The narrative carries a large supply of information with it.

The Brother of a Hero, by Ralph Henry Barbour. (*Appleton. $1.35.*)

Nothing is impossible to the boy hero who tackles athletics, even tho a brother before him makes it difficult to excel because of the high standard set. In this story a coach encourages the hero to stand on his own, and he does so with startling success.

Boy Scouts in the White Mountains, by Walter P. Eaton. (*Wilde. $1.*)

One of a series in which the adventures of a long hike in the White Mountains are described. Readers of the earlier stories will be glad to meet Peanut again; he is Mr. Eaton's one creation.

Captain Danny, by Walter Camp. (*Appleton. $1.35.*)

This describes the struggles between a professional coach and the captain of a baseball nine in a "prep" school. Tho the game is the thing in this story, we prefer Mr. Camp as an expert to Mr. Camp as a fiction writer.

Scouting With Daniel Boone, by Everett T. Tomlinson. (*Doubleday. $1.20.*)

A good historical book of adventure, wherein the hero becomes the close companion of the great scout. It is inartistically constructed evidently written in haste and shows one of Dr. Tomlinson's great

The Most Interesting Presents to Give or Receive Are Books

BIOGRAPHY

Thomas B. Reed — By SAMUEL W. McCALL

Ex-Congressman McCall, for many years an associate and intimate friend of Reed, has caught the very essence of the famous Speaker's rich, attractive personality in this remarkably readable biography. Illustrated. $3.00 net.

Samuel F. B. Morse — By EDWARD L. MORSE

The first authoritative biography, based on his letters and journals, of the inventor of the telegraph. His son has done his work with skill and intelligence, and the result is a notable addition to American biography. 2 vols. Fully illustrated. $7.50 net.

Rutherford Birchard Hayes — By CHARLES R. WILLIAMS

"The work is thorough and comprehensive, wrought with judgment and sympathy and illuminated by a style that sets this biography apart as a book unusually distinguished in its class."—*Indianapolis News.* Illustrated. 2 vols. $7.50 net.

A Far Journey — By ABRAHAM MITRIE RIHBANY

"It is a marvellous recital, this bridging of the thousands of years that separate Turkey and the United States and one that every true American can read with almost as great a pride as the teller of the story must feel."—*The Dial.* Illustrated. $1.75 net.

Emile Verhaeren — By STEFAN ZWEIG

This brilliant and sympathetic study of the great Belgian poet, the man and his work, by an Austrian writer, himself a poet, is of extraordinary interest at the present time. $2.00 net.

ESSAYS

Meditations on Votes for Women — By SAMUEL M. CROTHERS

"Whichever side we may happen to take on that most rampant of modern questions, we cannot fail to be pleased by the book as it meets the eye from every page, and entertained and enlightened by the most genial of our cultured American humorists."—*Boston Transcript.* $1.00 net.

On the Cosmic Relations — By HENRY HOLT

This study covers with extraordinary completeness, enlightenment and authority the whole ground of psychic phenomena, so-called, as a basis for the belief in the immortality of the soul. 2 vols. $5.00 net.

The Joyful Heart — By ROBERT HAVEN SCHAUFFLER

"A graceful argument for happiness and enthusiasm . . . . well worth reading and thinking over."—*San Francisco Chronicle.* $1.25 net.

What Men Live By — By RICHARD C. CABOT

"Such writing, because it sets before the reader in a fresh and entertaining way beliefs and truths hitherto but vaguely held, must be richly inspirational in its effects."—*Boston Transcript.* $1.50 net.

What Is It to Be Educated? — By C. HANFORD HENDERSON

"Every one concerned with the rising generation and every one who is not too old to seek for better adjustments in his own life, should reflect on the suggestions here made. . . . Mr. Henderson's style is, if anything, more charming than in his earlier books."—*Independent.* $1.50 net.

Fantastics and Other Fancies — By LAFCADIO HEARN

These contributions to the New Orleans papers in the early eighties are among Hearn's most important periodical work. Limited to 500 copies for sale. $5.00 net. Postpaid.

HISTORY AND THE WAR

Pan-Germanism — By ROLAND G. USHER

This remarkable book is a forecast of the present war and an explanation of the forces that made it inevitable. It is intended for popular reading and is absolutely impartial. $1.75 net.

War's Aftermath — By DAVID STARR JORDAN and H. E. JORDAN

An authoritative study of the effect of the American Civil War on the quality of manhood in the South. The startling results revealed by this investigation are prophetic of what we may expect on an even larger scale from the present conflict. 75 cents net.

The French Revolution in San Domingo — By T. LOTHROP STODDARD

The story of the French Revolution in San Domingo, which initiated that most noted attempt at negro self government, the Black Republic of Haiti. $2.00 net.

China Under the Empress Dowager — By J. O. P. BLAND and EDMUND BACKHOUSE

A new popular priced edition of the most important contribution yet made to our knowledge of China. It gives the inside history of China and the life of the great Empress Dowager with inimitable richness and vividness of detail. Illustrated. $1.75 net.

SCANDINAVIAN CLASSICS

Attractively printed and bound in red cloth, with a gold seal on the side.

Volume I. COMEDIES BY HOLBERG

Jeppe of the Hill, The Political Tinker, Erasmus Montanus

Translated from the Danish by Oscar James Campbell, Jr., Ph.D., Assistant Professor of English in the University of Wisconsin, and Frederic Schenck, B.Litt., Instructor in English at Harvard University; with an Introduction by Oscar James Campbell, Jr. 1914. *xv+178 pages.* $1.50 *net.*

These three plays are now for the first time published together in an English translation. The translators have endeavored not only to give a faithful literary version, but to interpret the comedies in a style that may be readily adapted for the English or American stage.

Volume II. POEMS BY TEGNÉR

The Children of the Lord's Supper, Frithiof's Saga

Translated from the Swedish by Henry Wadsworth Longfellow and the Rev. W. Lewery Blackley, with an Introduction by Paul Robert Lieder, A.M., of Harvard University. 1914. *xxvii+207 pages.* $1.50 *net.*

Tegnér is the one Swedish poet to whose works all his compatriots will at once accord a place among Scandinavian classics. By reprinting the faithful and spirited interpretations of Longfellow and of Blackley, the Foundation hopes to make Tegnér more easily accessible in English.

SCANDINAVIAN MONOGRAPHS

Attractively printed and bound in blue cloth, with a gold seal on the side.

Volume I. THE VOYAGE OF THE NORSEMEN TO AMERICA

By WILLIAM HOVGAARD, Professor of Naval Construction in the Massachusetts Institute of Technology. Late Commander in the Royal Danish Navy. 1914. *xxi+304 pages. 83 illustrations and 7 maps.* $4.00 *net.*

The abundant and beautiful illustrations in this book add greatly to its interest and value. Professor Hovgaard makes a fresh and thorough investigation of the whole problem of the Norse discovery of America, about the year 1000, and arrives at new and striking conclusions. The volume includes reliable translations of all parts of the sagas that concern Vinland and a special discussion of a matter upon which the author is eminently qualified to speak, namely, the nautical aspects of the voyages.

INDIVIDUAL COMMUNION SERVICE CO.
1701-1708 Chestnut Street **Philadelphia**

faults: a desire to be accurate results always in a final chapter where facts are crammed like raisins in one part of a badly mixt cake.

The Guns of Bull Run, by Joseph A. Altsheler. (*Appleton. $1.35.*)

Written from the standpoint of the South, this initial volume in a new series recounts all the exciting events in the first year of the war, and the hero associates with all the generals of note, proving himself worthy of their confidence.

Left End Edwards, by Ralph Henry Barbour. (*Dodd, Mead. $1.25.*)

In praise of football from the cover design to the last page, with an incidental sprinkling of characters who have ups and downs in their efforts to excel in the sport. Cut after the usual pattern, but Mr. Barbour maintains his spontaneous spirit.

Off Side, by William Heyliger. (*Appleton. $1.25.*)

This is what the publishers call a "vocational" story, and deals with a boy lacking in ambition, who enters business and thru the inspiration of an educator, discovers himself in time to overcome his lack of schooling. Incidentally he discovers his interest in life.

The Runaway, by Allen French. (*Century. $1.25.*)

A mystery centers around this boy who is accused of all sorts of things by the boy snob of the story, and who turns out to be the brother of a most unusual crook. In the end there is a general reforming of at least two of the characters, while the hero comes into his just rewards. It begins well, but lacks invention at the close. Relyea's drawings are particularly spirited.

The Winds of Deal, by Latta Griswold. (*Macmillan. $1.35.*)

A book that started out well and thruout maintains an excellent level of style. But the make-up of a boy hero with a weak character in a school where he is misled by another boy is not a healthy consideration for the young reader, however much he may reform in the end. The minor motive of a new teacher's attitude toward boys is excellently maintained.

FICTION FOR GIRLS

Beth's Wonder-Time, by Marion Ames Taggart. (*Wilde. $1.25.*)

A story with a gracious spirit running thruout, by the author of a good series called "The Six Girls." There is the real atmosphere of home in everything Miss Taggart does, and Beth proves herself a very winsome heroine during her wonder-trip to New York. In treatment and temperament Beth is much like the Six Girls; in fact, we fear that Miss Taggart will never escape that series.

Fairmount Quartette, by Etta Anthony Baker. (*Little Brown. $1.30.*)

The continuation of a series that is full of frolic and fun, and excellent girl characterization. We wonder how Mrs. Baker can keep up the same sort of invention year after year without losing courage. But she maintains an excellent level. The Quartette are splendid fun. But why is Mrs. Baker a victim of the "series" craze? She should do better.

Jean Cabot in Cap and Gown, by Gertrude Fisher Scott. (*Lothrop, Lee. $1.*)

The third in a series.

A Little Maid of Massachusetts Colony, by Alice T. Curtis. (*Penn Pub. Co. 80 cents.*)

A tale of the Revolution in an historical series. The Penn publishing house issues stories of like character too numerous to mention. The semi-informative style pervades many of them. The present story utilizes well-known personages as characters for the little heroine to meet.

LIBRARIES AND LIBRARIANS

The St. Louis Public Library has begun a collection of picture postcards of American localities for reference use, and already has 5000 views.

A sign attached to a silk cord drawn across the entrance to the art department in the Public Library, Newark, New Jersey, contains the announcement that "These books are shut off from the public because certain vandals are mutilating them."

A recent project of the Church Peace Union, founded with a $2,000,000 endowment by Andrew Carnegie in February, is the establishment of a peace library at 70 Fifth avenue, New York City. It is probable that branch libraries in a number of centers thruout the country will be formed.

The Cornell University Library has issued volume seven of *Islandica*, an annual relating to Iceland and the Fiske Icelandic collection in the university library, which is edited by the librarian, Dr. G. W. Harris. This latest volume contains *The Story of Griselda in Iceland.*

The Seattle Public Library recently employed a novel method of bringing the library to the attention of citizens. Sixty-five thousand copies of a four-page folder describing briefly the advantages offered by the library were enclosed with one month's bills of the city light and water departments.

The Hotel Sinton, Cincinnati, Ohio, has installed a library of 1500 volumes in the reading room on the second floor of the hotel. This is the second hotel in this country to take such a step, the first being the Touraine in Boston. Handsome catalogs bearing the crest of the hotel have been placed in each room of the hotel.

John Singer Sargent is completing, at his studio in London, the long-awaited new set of mural paintings for the Boston Public Library. The most important part of the work is a series of large paintings to decorate the long western wall of the gallery, which already contains the frieze of the Hebrew prophets.

Interest in the war in Europe is reflected in the activities of libraries. The library of the Bureau of Railway Economics, Washington, D. C., has prepared a multographed list of literature on Railways in War; and the Syracuse Public Library has published a sixteen-page pamphlet containing a list of books and magazine articles on Europe and the war.

Madame L. Haffkin-Hamburger, lecturer on library economy and secretary of the library course given at the Shaniawsky University of Moscow (the only course of the kind given in Russia), who has been spending several months visiting libraries in the United States, is marooned in this country by the war in Europe. She has given lectures on Russian libraries at several library schools.

Books for the Holidays

TWO CHARMING CHRISTMAS BOOKS

Betty's Virginia Christmas

By MOLLY ELLIOT SEAWELL. *Four illustrations in color by Henry J. Soulen. Page Decorations. 12mo. Cloth, decorated in green and gold. $1.50 net. Postage extra.*

A Southern story that carries the true spirit of Christmas to the hearts of young and old. To the tune of Dixie fiddles there is a rout of festive dances, early morning fox-hunts, and spirited feasts of turkey, egg-nog and the other delicious dishes for which Virginia cooks and Virginia farms are rightly famous.

Our Sentimental Garden

By AGNES and EGERTON CASTLE. *Illustrated in color by Charles Robinson. Head and tail pieces and decorative lining papers. Octavo. Cloth. $1.75 net. Postage extra.*

This book is a sheer delight, filled with the whims and fancies of garden-lovers. The authors have caught the note of family life in a picturesque old English dwelling, where grown-ups and children live largely out of doors. If one cannot own such a sentimental garden the next best thing is to know all about one.

HANDSOME EDITIONS

The Practical Book of Outdoor Rose Growing

By GEORGE C. THOMAS, Jr. *96 perfect reproduction in full-color of all varieties of roses. Octavo. Cloth. In a box. $4.00 net. Postage extra.*

The rose-lover and the rose-grower should be keenly interested in this beautiful and comprehensive book on roses. The exquisite illustrations and general attractiveness of the volume make it a practical gift book for any one engaged in flower-culture.

The Practical Book of Period Furniture

By HAROLD DONALDSON EBERLEIN and ABBOT McCLURE. *250 illustrations. Octavo. Cloth. In a box. $5.00 net. Postage extra.*

A practical book for those who wish to know and buy period furniture. It contains all that it is necessary to know about the subject. By means of an illustrated chronological key (something entirely new) one is enabled to identify the period to which any piece of furniture belongs.

Our Philadelphia

By ELIZABETH ROBINS PENNELL. Illustrated by JOSEPH PENNELL. *(Keepsake Edition.) 165 illustrations from photographs. Quarto. In a box. $7.50 net.*

An intimate personal record in text and in picture of the lives of the famous author and artist in the city of our present story will be to many an absolute surprise. Mr. Pennell's illustrations, made especially for this volume, are the greatest he has yet accomplished.

Colonial Mansions of Maryland and Delaware

By JOHN MARTIN HAMMOND. *Limited edition, printed from type which has been distributed. With 75 illustrations. Octavo. In a box. $5.00 net. Postage extra.*

A handsome volume which will delight all lovers of fine editions. Uniform in style and price with others in the Limited Edition Series—all of which are now out of print and at a premium.

Every American should read

The True Ulysses S. Grant

By General Charles King

General King has written an inspiring biography—the story of the great "Sam Grant," the "old man" of a thousand campaigns, the calm, self-confident, determined yet modest hero. *With 24 full-page illustrations. Buckram. $2.00 net. Postage extra.*

Give a boy this fine tale.

Buffalo Bill and The Overland Trail

By Edwin L. Sabin

This new volume in THE TRAIL BLAZERS SERIES is an inspiring, wonderful story of the adventures of a boy during the romantic days when "Buffalo Bill" began his adventurous career—the exciting days of the Overland Trail, the Pony Express and the Deadwood Coach. *Illustrated. $1.25 net. Postage extra.*

Children will laugh and dream over

The Cuckoo Clock

By Mrs. Molesworth

The new volume in THE STORIES ALL CHILDREN LOVE SERIES is one of the most delightful children's stories ever written. It has much the same charm as "Alice in Wonderland." Be sure to get the edition with Maria L. Kirk's notable colored illustrations and lining papers, and beautiful binding in red, gold and white. *$1.25 net. Postage extra.*

Good fiction for the Winter Fireside

The Ward of Tecumseh

By Crittenden Marriott

An enthralling novel of the American Wilderness after the Revolution. It has the tang and flavor of a Fenimore Cooper tale. *Illustrated. $1.25 net. Postage extra.*

MISCELLANEOUS

Heroes and Heroines of Fiction

By William S. Walsh

Mr. Walsh has compiled the famous characters and famous names in modern novels, romances, poems and dramas. These are classified, analyzed and criticised and supplemented with citations from the best authorities. A valuable, interesting reference book. *Half morocco. $3.00 net. Postage extra.*

The Romance of the Beaver

By A. Radclyffe Dugmore

This new "Dugmore" book will delight the stay-at-home as well as the out-of-doors man. It is profusely illustrated with Mr. Dugmore's remarkable photographs of the beaver in his native haunts.

The Mystery of the Oriental Rug

By Dr. G. Griffin Lewis

This charming book is compact with information and no one should buy rugs without its aid. *Frontispiece in color and 30 full-page plates. $1.50 net Postage extra.*

Christmas Books

Toaster's Handbook

For [illegible] and for all who enjoy [illegible]. All pages of the best [illegible], toasts, and [illegible]. Both a reference book and a book for entertainment. A [illegible].

An excellent [illegible] and original collection of [illegible] and [illegible]. Even those [illegible] as a volume of humor than as a book of [illegible]."

These furnish the main arguments on both sides of the question and the necessary historical data. Selected bibliographies, briefs and other features of value to all who want reliable information in condensed form are also included.

"These books have much value not only for the young debater, but for any person who is seeking well selected material for his general information on the subjects in question."—*Am. Economic Rev.*

150 to 275 pages, D., cloth, $1.00 *postpaid*

THE H. W WILSON COMPANY

59 Mamaroneck Ave.
White Plains, N. Y.

THE WORLD OF MUSIC

The Century Opera Company, having concluded its autumn season of two months in New York on November 21, has changed the scene of its activities for the winter months to Chicago, where it is meeting with great success.

Ferruccio Benvenuto Busoni is to be heard in America this season, not alone as pianist, but also for the first time as a conductor of his own compositions. He has recently been enjoying sensational successes in the larger Italian cities.

Rafael Joseffy, America's foremost pianist, just recovered from a long period of sickness, is reported to be hard at work on a monumental new edition of Chopin's complete works, which will begin to make its appearance soon. No living musician is better equipped for just this task than Joseffy.

Because of the war in Europe, New York is the greatest musical capital of the world this winter, providing the only great opera season thruout the world, the largest number of high-grade orchestral concerts, chamber music concerts, and recitals, and enjoying the ministrations of the largest number of the foremost living soloists both vocal and instrumental.

Percy Grainger, the young Australian composer who has leaped into international fame in the last year or so, is spending the winter in New York. He is an explorer in the treasure-stores of folk-song, of which he has obtained most exceptional specimens in far corners of the world by means of phonographic recording, and is a champion of the music of the Orient.

Ossip Gabrilowitch, pianist, despite his Russian name and origin, was allowed to leave Germany to tour the United States this season. He began with a recital in New York on November 25 with the assistance of his wife, Mme. Clara Clemens, the only surviving daughter of Mark Twain, whose singing has been winning high praise from leading German critics.

Musical Europe has suffered a serious loss in the death of Willem Mengelberg, the Amsterdam conductor He was in the very front rank of orchestral conductors of the day, tho he was only forty-three years of age. He visited America in 1905 as a guest conductor of the New York Philharmonic, when he gave an electrifying performance of Richard Strauss's "A Hero's Life," which was dedicated to him by the composer.

Fritz Kreisler, the Austrian violinist, reported to have been killed in the fighting near Lemberg in September, arrived in New York on November 24, from Holland, limping and leaning on a cane, which he fears he may not be able to discard for some time. A Cossack tried to kill Kreisler by riding him down. The violinist shot and killed the Cossack, but received an ugly lance wound in his right thigh. Then he lay in a trench for seven hours before he was found and taken to a hospital by his orderly. He says his wound will not interfere with his concert tour here.

Longmans' New Books

George III. and Charles Fox

The Concluding Part of

"The American Revolution"

By the Right Hon. **Sir George Otto Trevelyan,** Bart., O.M. In two volumes. With Maps and Complete Index. Crown 8vo. Green cloth, gilt top. Vol. I, $2.00 *net*, Vol. II, $2.25 *net*.

* * * The six volumes, which Sir George Trevelyan's great work comprises, may be had in uniform green cloth, in a box.

"This series of volumes stands alone as a history of the American War of Independence, at once so careful of the amenities of history, so favorable to the American cause and its leading actors, so unsparing in its criticism of the royal policy and agents, so replete with interesting pictures of English social conditions. Judicious selection of material and charm of presentation."—*Nation.*

Mentally Defective Children

By **Alfred Binet** and **Th. Simon, M. D.** Authorized Translation by **W. B. Drummond,** Author of "An Introduction to Child Study," etc. With an Appendix containing the Binet-Simon Tests of Intelligence by **Margaret Drummond, M.A.** and an Introduction by **Professor Alexander Darroch.** With 10 Diagrams. Crown 8vo. $1.00 *net.*

The Training of a Sovereign

An Abridged Selection from "The Girlhood of Queen Victoria."

Being Her Majesty's Diaries Between the Years 1832-1840. Published by Authority of His Majesty the King. Edited, with an Introduction by **Viscount Esher.** *New and cheaper edition in one volume.* With 7 Illustrations. Square 8vo. $1.50 *net.*

The Pan-Angles

A Consideration of the Federation of the Seven English-Speaking Nations.

By **Sinclair Kennedy.** With a Map. 8vo. $1.75 *net.*

"The book was printed before the European war was upon us. Its arguments are the more cogent in being unbiased by the object lesson with which they are now strengthened.

"No preconceived objections should stand in the way of a careful reading of the book. It is worthy of the respectful attention of every American citizen, and of every man of the English speech with our common heritage of civilization."—*Boston Herald.*

Presence

By the **Rev. Charles H. Brent, D.D.,** Bishop of the Philippine Islands. Author of "Leadership," etc. 12mo. $0.50 *net.*

"A book which will be received with delight. . . . The book is delicate, graceful, almost evanescent in its treatment of a theme which is not less real for being elusive."—*The Christian Advocate.*

Teacher and Teaching

By the **Rev. Richard H. Tierney, S.J.,** Editor of America. $1.00 *net.*

PHOTOGRAPHIC NEWS

The smallest reflecting camera is made in England; in quarter-plate size it is but six and one-half inches square and weighs only four pounds.

A new paper, printing by daylight and self-toning, may be used for transferring prints to china, glass or metals without stripping the film or using special compounds.

The hydrometers used by many photographers are prone to error; to test yours, drop it into distilled water. If it registers "0" it is accurate; if not, shift the scale to correspond.

Users of the Cooper-Hewitt light, particularly in confined situations, may notice a not disagreeable but penetrating odor. This is due to the liberation of ozone by the action of the light, and indicates a condition far more healthful than otherwise.

It is impossible for many photographers to use a developer containing metol because of the poisonous effect of the latter upon the skin. If potassium carbonate is substituted in the developer for the sodium carbonate commonly used, the metol will be rendered harmless.

A discovery of interest to the newspaper photographer is that while on a negative dried in still warm air the emulsion is apt to soften and slip, this trouble is obviated if the air is in motion. Thus, by means of an electric fan and a warm room, negatives may be dried in a few moments.

A new film-pack is provided with a safety cover after every third exposure. This allows it to be removed in daylight for focussing or other purposes four times before the completion of the twelve exposures, instead of its being necessary to wait until the twelve were consumed, as with the common types.

Magnesium ribbon has long been recognized as a cheap, constant and rapid printing light, but means for conveniently burning it have been lacking. In a new device the ribbon is contained in a holder which records in seconds the exposure that will be given by any length of ribbon withdrawn, and extinguishes the flame when the designated quantity has been burnt.

Simultaneous development and fixation would be an obvious boon, inasmuch as the photographer could put his exposed plates into the solution in the confidence that he could later return and find them finished, with the added certainty that they would be correctly developed. Several formulae for such developers have been suggested, and are said to work with a great measure of success.

Many remarkable results in animal photography have been achieved by causing the animal to trip a spring which simultaneously fired the flash and opened the shutter, altho to offset the delay in the shutter action it has been necessary to use excessive quantities of powder. Successful attempts have recently been made to synchronize the action of shutter and flash in order to overcome this defect.

Books all about, but—

¶ *Sometimes, you know, you go into a bookstore and are absolutely puzzled. You are book hungry, but don't know what to do. Books are all around you but you feel as lonesome as one often feels in a big city—plenty of people, but no sure friends. Maybe you go out without a book, or maybe you get the wrong book. At any rate, you feel sort of dissatisfied.*

¶ *When you get to be a Member of the United Libraries Association all this trouble is over. It is our business to save you mental strain and mistakes in the matter of book selection.*

¶ *When you write to us for particulars (which will probably be today) we will tell you exactly how to become a Member of the Association and participate in the privileges, savings, and perquisites which we afford our book-friends.*

There are no dues—no obligations. Send us your address.

VIOLIN-AND-PIANO PLAYER

Henry K. Sandall, the inventor of an automatic violin player which was shown in London in 1908 and aroused astonished interest there, has now followed that ingenious device with a still more remarkable achievement and produced a combination automatic instrument which plays a violin and piano together and performs intricate musical compositions in a surprizing manner. This unique "player" has recently been placed in the musical instrument collection of the Smithsonian Institution in the United States National Museum at Washington, where it contrasts oddly with some of the very old violins and the clavichords, harpsichords and other precursors of the pianoforte.

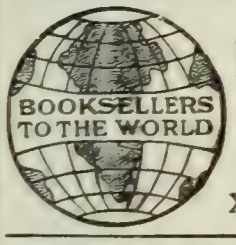
In view of the complete coördination achieved in this invention, the operation of its mechanical parts is comparatively simple. The violin is played by means of four revolving cylinders, composed of laminated disks of silk and celluloid, one over each of the four strings, which are brought into contact with the strings at the proper instant by a series of small levers. The production of the various individual notes is made possible by a sort of mechanical fingering which depresses one of the metal fingers over the particular "fret," producing the note desired. The contrivance imitates human bowing and fingering. But it is also capable of feats impossible to the human violinist, since it can sound as many as four notes at once in true quartet harmony. Tremolo effects are secured by the vibration of the bottom binding post of the strings which swings back and forth thru the operation of a cam. An adjustable device makes personal interpretation of the music possible.

The piano playing part is built on the principle of the magnetic action of an electric piano player, but it is provided with more variations and has a far greater range of expression than the ordinary electric player, while its main point of interest of course is its synchronism with the violin. The combined mechanism is operated by electricity, and this dual player is enclosed in a wooden case provided with several small doors which make it possible to increase or decrease the tone volume at will.

OUR PROGENITOR'S THIRD EYE

Situated centrally in our heads just below and between the large lobes of the brain is a small body, the pineal gland. Comparative anatomists tell us that this is all that is left in man of an organ that in previous ages served some of the lower vertebrates as a third eye. Very little is known of the use of this supposedly degenerate organ. That the pineal gland in man is somewhat active in secreting fluid up to the age of puberty and that a tumorous condition of the gland in childhood brings about precocious development, structurally, mentally and sexually, has led to the belief that this organ serves to check too rapid prepubic development.

The Restful Glow Without the Glare



A strong, rich light that never strains the eyes streams from the "Emeralite"—the light that's "kind to the eyes." The adjustable shade—emerald green outside, opal inside—is scientifically constructed to throw the light exactly where it is wanted.

Dealers everywhere can supply you.

SUPPLEMENTARY READING

"We have been using The Independent for several years as a supplementary reading matter for our freshmen at the opening of the year. Our idea has been that it is a good thing for the freshmen to have something at hand to read with a zest while in their first months, when they are away from their home ties, and material but generally best at least. Sometimes at the opening of the year it is difficult to find work to interest them. Perhaps we may use an article as an illustration of some point we are discussing in the composition work. Sometimes we have debates and extemporaneous speeches. Generally we use the 'Current Events' in connection with the purpose of getting the students thinking in real language and independent thinking is of [illegible] importance."

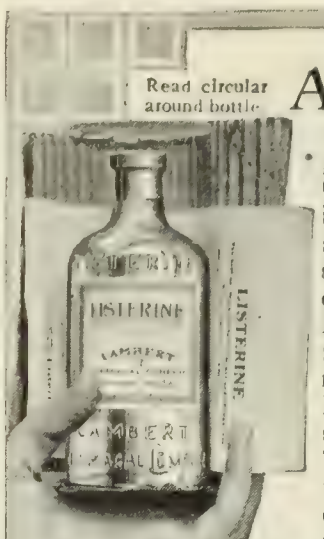
Recently Dr. C. P. McCord, of Detroit, Michigan, has been experimenting in feeding to growing animals tissue prepared from the pineal glands of cattle mixt with milk sugar in order to get a more precise knowledge of the function of this organ. In all of his work Dr. McCord carried on parallel sets of experiments. That is, for every group of dogs, chickens or guinea pigs receiving tablets of pineal tissue and milk sugar an equal number of animals of the same age received tablets containing only the milk sugar. Otherwise, the living conditions of the two sets of anmals were exactly similar.



The results in all cases were the same: those animals that were fed pineal tissue far outstripped their brethren in development. The pineal fed dogs were fully a month ahead of those receiving the blank tablets. This was especially obvious in the way they responded to call, found their way back to the cage, and lapped up milk. The guinea pigs receiving pineal substance began to bring forth young fourteen days before the normally fed pigs did. This rapid development was in no sense abnormal in that malformations or gigantism resulted. There was simply a hastening the prepubic growth so that mature development was reached earlier than under normal conditions. But not all pineal tissue has this effect upon growth. If the material is taken from cattle that have reached their maturity the pineal fed animals are no different from those receiving blank tablets, showing that the effect of the gland, so far as development is concerned, ceases at maturity.

It is possible that, if pineal tissue were not so expensive, it would be of great commercial value in forcing development of stock for market. The potential value to humanity of these experiments is undoubtedly great, especially in the treatment of arrested development of children.

Algernon—Do you think two can live as cheaply as one, Miss Simpkins?

Miss Simpkins (eagerly)—Yes, Algernon, yes! I certainly do!

Algernon—How sad! And still women think they are mentally qualified for the ballot.—*Judge*.

A BOTTLE of Listerine, a toothbrush, a glass of water (and a dentifrice, if you so desire), are the requisites of a correct dental toilet. Brush the teeth regularly and rinse them with Listerine, the safe antiseptic. The Listerine permeates the entire mouth, reaches parts of the teeth that the brush cannot touch and so makes them clean and aseptic.

DOW, Jamestown, N. Y.

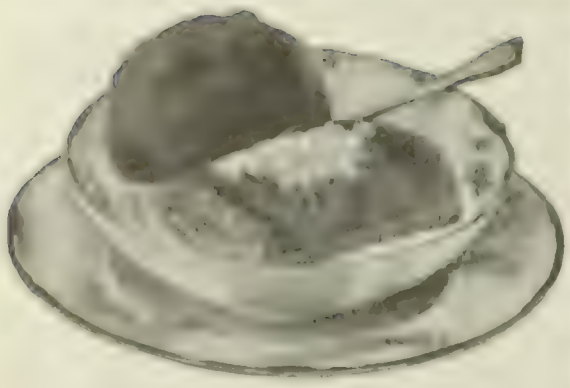
FINE WISCONSIN FARMS for sale of all sizes and prices. They are among the finest in the State of Wisconsin, the soil is very productive, and the crops are always sure, as the rainfall is always ample; they consist of corn, wheat, rye, barley, clover, timothy, alfalfa, fruit and vegetables. They are located near churches, schools and good markets; prices are very reasonable and terms are part cash and balance in five years at 6 per cent. interest. Come at once and make your selection. We have just the farm you are looking for. Hart Lumber and Cedar Company, Oconto, Wis.



A STATELY, SPACIOUS SUMMER HOME

ON LONG ISLAND SOUND

At the mouth of the Connecticut river, and half a mile from where Yale college was founded, may be bought at a bargain. It is in an exclusive colony of delightful people, with a yacht club close by, tennis and golf links almost on its own grounds, with perfect automobile roads from the door to Providence, Boston, Hartford, New Haven and New York.

The house was built for hospitality and substantial comfort. A pillared portico with a hundred and fifty feet of piazza. Twelve fireplaces—one of them with a six foot opening. Steam heat. Sixteen bedrooms. Four tiled bathrooms and two others. The owner will answer questions and show pictures if desired. Electric light plant, garage, and chauffeur's cottage. For a family with young people there never was a better opportunity to secure at a very moderate price a perfect summer home by the seaside. The house would be sold with furniture if desired. Address

The Cost of High Living

is not in dollars and cents alone, but in the breaking down of those functions of the human body that bring health and happiness and in the depletion of those vital forces that contribute to long life. Health and high efficiency come from eating a simple, natural food like

Shredded Wheat

combined with regular habits and proper outdoor exercise. In this food you have all the body-building elements of the whole wheat grain made digestible by steam-cooking, shredding and baking. "War prices" need not affect the cost of living in the home where Shredded Wheat is known. Always the same in price and quality.

Two Shredded Wheat Biscuits with hot milk and a little cream furnish natural warmth for a cold day and supply all the nutriment needed for work or play. Delicious for any meal in combination with baked apples, sliced bananas, canned peaches, pears or any fruit.

"It's All in the Shreds"

The Shredded Wheat Company
NIAGARA FALLS, N. Y.

THE MARKET PLACE

THE BOND MARKET

In the first six days of bond trading on the New York Stock Exchange, after its four months of inaction, an unexpectedly large amount of business was done. Bond sales for the six days amounted to $8,334,500. In the same days of last year the sales were $9,168,500. This is a decrease of almost exactly nine per cent—hardly a terrifying drop under all the circumstances.

With purchases of .over eight million dollars worth of bonds in six days, at prices restricted by the minimum level established by the authorities of the Exchange, there is evidently a healthy investment demand. If securities were being dumped upon the market in great masses, investors would hardly be willing to buy in anything like normal quantities. They would rather wait until the bars were let down. If there were not money waiting for investment, there would be no buying.

On the whole the prices of bonds have advanced during the week. The advances have been small, but any advance at all is encouraging.

NOW FOR STOCKS

The further opening of the Stock Exchange for trading in stocks should be not far off. The Committee of Five undoubtedly has a plan under consideration, which may be adopted in definite form at any moment. Another step forward has already been taken in the sending out over the ticker of prices of listed stocks bought and sold thru the Stock Exchange clearing house. These quotations, like the sales of bonds, show a definite buying tendency, resulting in good price advances in several issues. Among the stocks whose prices are appreciably higher than the minimum prices established by the Committee of Five (at the closing level of July 30) are the following:

	Minimum Price	Closing Price Dec. 5
American Beet Sugar	19	28
American Can	19½	26
American Can pref	78¼	89½
American Sugar Refining	98¼	103
Bethlehem Steel	30	41¾
Central Leather Co	28	34
General Motors	58⅞	77
Inter. Harvester of N. J.	80¾	91½
New York Central	78¾	81⅞
People's Gas	104	116½
Union Pacific	111½	115
Western Union	52⅜	58

So, as in the bond market, there is evidently a good demand for stocks, and the dreaded foreign liquidation is not yet materializing to any alarming extent. With the demand for investments growing, with the banks in stronger and stronger condition to furnish the necessary financial means for trading, and with our international position improving every day, as evidenced by the decline of demand sterling to 4.87¼, a full cent below the rate prevailing at the close of the third week of July, the opening of the Exchange to stock trading can hardly be far distant. There remains, of course, one unsolved element in the situation, the question of railway rates. It is interesting to observe that most of the stocks which have advanced in price in the past weeks are industrials. Investors in railway securities are biding their time, waiting to see what the Interstate Commerce Commission will do in the reopened rate case. A favorable decision by the Commission would probably do more than anything else that is likely to happen to make the further extension of trading on the Exchange a safe procedure.

But whatever the Commission's action may ultimately be, it should not be necessary to condition the resumption of stock trading only upon an affirmative decision. The general situation has so far improved that it is highly probable that cautious and restricted trading on the Floor could do little more harm than must inevitably come as the outcome of the dislocating effect of the war. The Governors of the Exchange have thus far shown themselves so wise and prudent that there is no reason to believe that any action they may take will be premature. With admirable self-control they have resisted the cumulative pressure quite naturally exerted by those whose livelihood depends upon Exchange trading. The fact that they are now seriously considering a definite plan for an early resumption of stock dealings is the best evidence that the time is ripe for such a procedure.

LOANS FOR COTTON PLANTERS

The cotton loan plan for enabling the planters of the cotton states to carry themselves over until a revived market enables them to dispose of their crops without too serious a sacrifice is being slowly completed. Chairman Harding of the cotton loan committee has completed the appointment of the state loan committees for each of the cotton states. These committees, acting thru local committees to be appointed by them, are to assemble the applications for loans in their various territories and pass them on to the cotton loan committee for final action. Mr. Harding has reported that general interest in the plan is manifested thruout the cotton country and that many applications for loans are reasonably to be expected. A conference with the chairmen of the state committees is to be held by the loan committee at Washington on December 14.

Mr. Harding is further reported as saying, "We do not care now whether loans are to be made from the cotton pool or not. The funds are available for use and planters and growers of cotton have until February to make up their minds if they wish to borrow any money. The fact remains that the efforts of Administration officials have been such as to wipe out completely any money stringency in the South."

The British Treasury Department apparently looks with disfavor upon the proposal to open the London Stock Exchange at an early date.

Six of the indicted directors of the New Haven road have entered pleas of immunity because of testimony given by them before the Interstate Commerce Commission. All the other directors who have been indicted have entered pleas of not guilty. The pleas in abatement, attacking the validity of the indictment on the ground that the grand jury had been irregularly drawn, entered by nine of the defendants, have been dismissed by the Federal judge before whom they were argued.

Still the cost of living goes down. The index number of the New York *Times Annalist*, which shows the fluctuations in the average wholesale price of twenty-five food commodities representing a theoretical family's food budget, has reached the low level for the war of 146. This is only a few points above the average level of the last months of 1913 and the first half of 1914. In the first weeks of September the index number jumped to 162. So the improvement does go on. The individual may not be acutely conscious of it, but in the long run his pocketbook should feel the difference.

Mr. David Lloyd-George, England's Chancellor of the Exchequer, has found it necessary to correct the statement which was reported here recently in which he was made to say that the United States owes Great Britain five billions of dollars. His explanation is as follows: "Judging from the comments which have appeared in the American press, the Chancellor of the Exchequer's statement on Friday last in the House of Commons with regard to exchange between this country and the United States of America appears to have been incompletely reported in America. Mr. Lloyd-George's actual words, as reported in the official report, were: 'America, I suppose, owes us nearly a thousand million pounds in fixed and floating capital, but we could not buy. It was impossible to do any business. Why? The exchanges had broken down. This paper machine had crumpled and somehow got out of order, and the result was that no business was possible.' This statement seems to have reached the United States in the form that America owed the United Kingdom a thousand million pounds, without any explanatory words that this sum was owed in fixed and floating capital. These words, of course, make it quite clear that Mr. Lloyd-George's statement referred to the total of British invested capital in America, and in no way to America's indebtedness in respect of the current balance of trade between the two countries." Any one who knew the facts knew that the statement as originally made was not true. Any one who knew the Chancellor must have known that he never made the statement that way.

The following dividends are announced:

American Car and Foundry Company, preferred, 1¾ per cent.; common, ½ per cent., both payable January 1, 1915.

Liggett & Myers Tobacco Company, preferred, 1¾ per cent. payable January 2, 1915.

Manila Electric Railroad and Lighting Corporation, quarterly, 1¾ per cent., payable December 21, 1914.

New York Central & Hudson River Railroad Company, New York & Harlem Railroad Company, 5 per cent., payable January 2, 1915.

The Cost of a Telephone Call

DID you ever think how much it costs to give you the telephone right-of-way anywhere, at all times?

Your telephone instrument, which consists of 130 different parts, is only the entrance way to your share of the vast equipment necessary in making a call.

Your line is connected with the great Bell highways, reaching every state in the union—with its poles, copper wire, cross arms and insulators in the country; its underground conduits, manholes, cable vaults and cables in the cities.

You have the use of switchboards costing upwards of $100,000,000. You enjoy the benefits of countless inventions which make possible universal telephone talk.

Your service is safeguarded by large forces of men building, testing and repairing lines. You command at all times the prompt attention of one or more operators.

How can such a costly service be provided at rates so low that all can afford it?

Only by its use upon a share-and-share-alike basis by millions of subscribers, and by the most careful economy in construction and operation. A plant so vast gives opportunity for ruinous extravagance; and judicious economy is as essential to its success as is the co-operative use of the facilities provided.

That the Bell System combines the maximum of usefulness and economy is proved by the fact that in no other land and under no other management has the telephone become such a servant of the masses.

North Dakota Farm Mortgages

Are relieved from the constant fluctuation of general class securities.

Farm Mortgages secured upon land, the prime factor of the country's prosperity, made in an old settled country, and by Bankers of established reputation and character are the Ideal Investment.

My 33 years residence, and 30 years making Farm Mortgages without the loss of a dollar in interest or principal, gives the careful investor every warrant and guarantee of absolute security.

Write for particulars.

WALTER L. WILLIAMSON
LISBON NORTH DAKOTA

Atlantic Mutual Insurance Co.

Atlantic Building, 51 Wall St., New York

Insures Against Marine and Inland Transportation Risk and Will Issue Policies Making Loss Payable in Europe and Oriental Countries

Chartered by the State of New York in 1842, was preceded by a stock company of a similar name. The latter company was liquidated and part of its capital, to the extent of $100,000, was used, with consent of the stockholders, by the Atlantic Mutual Insurance Company and repaid with a bonus and interest at the expiration of two years.

During its existence the company has insured property to the value of	$27,219,045,826.00
Received premiums thereon to the extent of	282,298,429.80
Paid losses during that period	141,567,550.30
Issued certificates of profits to dealers	89,740,400.00
Of which there have been redeemed	82,497,340.00
Leaving outstanding at present time	7,243,060.00
Interest paid on certificates amounts to	22,585,640.25
On December 31, 1913, the assets of the company amounted to	13,259,024.16

The profits of the company revert to the assured and are divided annually upon the premiums terminated during the year, thereby reducing the cost of insurance.

For such dividends, certificates are issued subject to dividends of interest until ordered to be redeemed, in accordance with the charter.

AN INCOME FOR LIFE

Of all the investment opportunities offered there are few indeed not open to criticism. Absolute safety is the first requisite and adequate and uniform return equally important, and these seem incompatible. Aside from government bonds, the return under which is small, there is nothing more sure and certain than an annuity with the METROPOLITAN LIFE INSURANCE COMPANY, by which the income guaranteed for a certain lifetime is larger by far than would be earned on an equal amount deposited in an institution for savings, or invested in securities giving reasonable safety. Thus a payment of $5,000 by a man aged 67 would provide an annual income of $618.35 absolutely beyond question or doubt. The Annuity Department, METROPOLITAN LIFE INSURANCE COMPANY, New York, will give advice as to the return at any age, male or female.

INSURANCE

CONDUCTED BY W. E. UNDERWOOD

This department of The Independent will undertake to furnish on the request of readers any information respecting the business of insurance and the companies transacting it which we have or can procure. We cannot, however, pass upon the debatable comparative differences between companies that conform to the requisite legal standards set up for all, except in so far as the claims made by any of them seem to be inconsistent with the principles of sound underwriting. Address all communications on insurance subjects to the editor of the Insurance Department.

INSURANCE STAMP TAX

On December 1, the new Federal law providing supplementary internal revenue funds, including the taxation of certain forms of insurance, became operative and has resulted in an unusual amount of confusion for the companies and agents concerned. This is especially true of the fire branch of the business. The law takes the line of least resistance and provides for the collection of the tax from the companies. That is to say, the payment of the tax, which is one-half of one per cent on premiums, must be evidenced by a stamp affixed to the policies.

The fire insurance companies take the position that they ought not be expected to bear the burden and cite their extremely slim underwriting profits in support of their contention. They hold to the opinion that the policyholders should assume it.

Then come the insurance commissioners of most of the leading states with rulings prohibiting the collection of the tax from policyholders or insurance agents. The Commissioner of Internal Revenue at Washington when appealed to replied that the stamps must be affixed at the time policies are issued and indicated that after that he was not interested in the matter. Under some of the state rulings the amount of the tax may not be added to the premiums. As nearly as we can estimate it the tax will aggregate about $1,500,000 a year on fire insurance.

THE PRUDENTIAL

The management of the Prudential Insurance Company of America, aided by the enlightened legislative and judicial policies of New Jersey, have achieved or are about to achieve one of the most stupendous and unusual tasks ever attempted in business by transferring the ownership of that gigantic organization from the stockholders to the policyholders—from a close corporation numbering a few hundreds to the 12,000,000 insured persons who furnish all the money. A few other insurance companies have been transformed from joint-stock corporations to mutual organizations, but all of them were pygmies compared with the Prudential. In this case the undertaking was no small one. There was stiff and uncompromising opposition from a powerful minority among the stockholders, who fought every inch of the way. How valuable is the property the policyholders are about to secure may be judged by the report of the appraisers, who placed the stock (par, $50 a share) at $455.

Let us see what the property is. The capital is $2,000,000 divided into 40,000 shares. It will therefore cost $18,200,000 to purchase it at the appraised price, $455 a share. The total amount of cash invested by the stockholders was but $91,000, the remainder, $1,909,000 having been built up out of profits. For years the dividends have been at the rate of ten per cent—$200,000 a year, or 220 per cent of the original cash investment. A business capable of producing such results is worth buying at a big price, and particularly so when the purchasers are the persons out of whom such profits are made.

On December 31, 1913, the admitted assets of the Prudential were $335,478,783. Its unassigned funds (surplus), $36,278,039. There is no provision in the company's charter under which the title to this surplus could be denied to the stockholders. There are more than 12,000,000 policyholders carrying a total insurance amounting to $1,462,516,000. The total income in 1913 was $95,493,052, and it will greatly exceed $100,000,000 this year.

We have told enough to indicate the value of the plant that will soon pass into the hands of the policyholders if nothing unusual occurs. After the change is made all the profits, that is to say, savings, will go to the policyholders and, that which is of more importance, their interests will never again be subject to the vicissitudes or mutations incident to stock control. This is not saying that stock control is necessarily threatening, but that, as compared with the mutual system, it embodies possibilities of injury wholly foreign to the other.

NOTES AND ANSWERS

J. T. L., French Lick, Ind.—Know of no text-book on the subject. Suggest you write Prudential Insurance Company, Newark, New Jersey, and Metropolitan Life Insurance Company, New York. Believe they would enlighten you.

C. S. R., Cleveland, Ohio.—The greatest volume of the company's business consists of small policies on industrial classes at a dollar a month premium. The management expenses in all such companies are inordinate. Get a policy in one of the strong well-established casualty companies.

S. W., Chicago, Ill.—See reply to C. S. R. The expenses of the company you name are inordinate. Its income in 1913 from policyholders was $1,377,984 and it paid in claims $455,678. Its management expenses were $877,789. The ratios are: claims 33.1 per cent; expenses 63.7 per cent.

NEW RED CROSS MEMBERS

Each Contribution of Two Dollars or more constitutes the giver a Member of the American Red Cross for the current year, with a free copy of the October issue of the *Red Cross Magazine*. The Independent will send—by authority— to each contributor a Certificate of Membership and a Red Cross Button.

The total amount contributed to the Red Cross Relief Fund thus far thru The Independent is $4,896.39.

The following list covers the contributions of the past week:

Charles F. Abbott, Middlebury, Conn., $2; Miss V. Helen Anderson, Mellette, S. Dak., $2; A. A. Avery, Oil City, Pa., $2; Burt Brown Barker, Chicago, Ill., $2.50; Brooklyn, Pa., churches, Brooklyn, Pa., $4.50; Mrs. Henrietta Brown, Anthony, Kan., $50; Miss Adelaide Brown Coburn, Seattle, Wash., $2; Miss Edna B. Conn, Shelbyville, Ill., $2; Mrs. J. E. Copeland, Hoosick Falls, N. Y., $2; Courtenay Public School, Courtenay, N. Dak., $19.47; Miss Mary E. Dickinson, Lakewood, N. J., $2; Arthur N. Fancher, Bay City, Mich., $2; T. C. Gilpin, Winterset, Iowa, $20; W. S. Gordis, De Land, Fla., $2; V. Grant Gordon, Fort Collins, Col., $2; Miss Green and Miss Elizabeth Strehlow, Sioux City, Iowa, $13; William Hadley, Ashland, Va., $2; J. W. Harsha, Chicago, Ill., $3; Miss Ida W. Heise, Omaha, Neb., $5; L. D. Henry, Hartford, S. Dak., $2; Miss Bora Herold, Anthony, Kan., $2; G. L. Jacquot and Mrs. G. L. Jacquot, Ivanhoe, Minn., $4; E. A. Jenner, Indianola, Iowa, $2; O. Kolsboe, Plummer, Minn., $2; The Library Sunbeams, Emlenton, Pa., $6; Little Friends in Oregon, Portland, Ore., $2; John McGeown, Anthony, Kan., $5; R. C. Merrill, Chester, Mont., $5; Miss Ada Miller, Fostoria, Ohio, $2; Miss Irving Moxley, Shelbyville, Ky., $2; Mrs. D. B. Abrota S. Pratt, Washington, D. C., $2; Mr. A. F. Quick, Webster Groves, Mo., $2; C. A. Robley, Cato, Wis., $2; Miss Carmen Z. Rooney, Pasadena, Cal., $2; W. F. Rustenbach, Anthony, Kan., $2; Miss Sue R. Scott, Oakdale, Pa., $2; M. E. Sheltran, Ann Arbor, Mich., $2; Miss Irma Sievers, Wessington, S. Dak., $5; C. S. Stone, Deschutes, Ore., $2; George N. Stray, San Jose, Cal., $5; Rev. C. C. Warner, Mobridge, S. Dak., $2.54; Burr Willitts, Lenox, Iowa, $2; Women's Club of Mobridge, S. Dak., $22.

THE OTHER FRANCO-PRUSSIAN WAR

From The Independent, December 15, 1870

Important military operations in France rapidly progress, and the end cannot now be far distant. Indeed, it was stated, after the late French reverses at Paris and Orleans, that Gambetta, the French minister of war, at last convinced of the hopelessness of the struggle, would ask for an armistice, to enable the National Assembly to be elected, and declined the responsibility of further prolonging the struggle.

By the courtesy of Messrs. Nicol & Davidson, of this city, we take from a "balloon" letter, just received from their house in Paris, the following as the price list of food in Paris, the quotations being in gold: Turkeys, $13 each; Geese, $7 each; Butter, $9 per lb.; Cats, from $3 to $5 each, and command a ready sale; Horse-meat, $1 per lb.; Mule meat, $1.10 per lb; Bread cheap and plenty

STEINWAY

IF you are thinking of purchasing a piano as an appropriate gift this Christmas, consider what a Steinway would mean in your home.

Necessarily the Steinway is priced slightly higher than pianos of other makes. This difference in cost merely reflects the superior qualities of the Steinway. The price makes possible the incomparable tone, resonant and sweet, and the perfect workmanship that makes every Steinway a lifetime possession.

We shall be glad to send you, free, illustrated literature, with the name of the Steinway dealer nearest you.

is the one that gives the Greatest Service—and lasts the longest. So send your friend a year's subscription to

THE FORWARD LOOKING MAGAZINE

THE INDEPENDENT'S Christmas Card is printed in two colors on Deckle Edge Parchment Antique. This illustration is three-quarters of the actual size.

CHRISTMAS is nearly here. Your days for holiday shopping are numbered. Besides, you will find it difficult to buy for so small a sum a gift which fifty-two times during the year will bring so much of interest, information, vitality and good cheer.

¶ Send us the names and addresses of the friends you wish to remember. Use your War Time Coupons in remitting. We will see that each friend receives our handsome Christmas Card, with your name inscribed, not later than Christmas morning. To each name we will also send a complimentary copy of our Special Christmas Number.

The Independent

PEBBLES

The ostrich has become a rival of the turkey as the bird of Thanksgiving. Heaven help him who gets the neck!—*Puck.*

Mother—Now, Freddie, if you're disagreeable to Cousin Ethel she won't come and play with you again.

Freddie—Is that a promise?—*Life.*

Willis—Where have you been?

Gillis—In the hospital, getting censored.

Willis—Censored?

Gillis—Yes. I had several important parts cut out.—*Puck.*

"That horn doesn't blow, sir," said the friendly salesman.

"Wrap it up," said Uncle Tobias, thinking of his sweet little nephew. "That's the kind of a horn I want."—*Woman's Home Companion.*

An apostrophe to the value of the hen is attributed by an exchange to a philosophical colored man. He said: "Chickens, suh, is the usefulest animal they is. You c'n eat 'em 'fo' they's bo'n, an' aftah they's daid!"—*The Outlook.*

Maud—What was in that last package you opened?

Beatrix—My Christmas present from Aunt Janie.

Maud—What is it?

Beatrix (glancing at gift-bag)—She has neglected to say.—*Life.*

AN AWFUL THREAT

Parson Johnson—De contribution dis morning will be fo' de purpose ob making up de deficit in your pastor's salary! De choir will now sing, and will continue to sing, until de full amount am collected!—*Puck.*

"What is the shape of the earth?" asked the teacher.

"Round."

"How do you know it's round?"

"All right, it's square, then; I don't want to start any argument."—*Columbia Jester.*

Hostess (at party)—Does your mother allow you to have two pieces of pie when you are at home, Willie?

Willie (who has asked for a second piece)—No, ma'am.

"Well, do you think she'd like you to have two pieces here?"

"Oh," confidently, "she wouldn't care. This isn't her pie."—*Louisville Times.*

A former president of the National Civic Federation relates an incident of a certain Max Jacobs who had taken out an insurance policy on a building which he had recently purchased. Four hours later a fire broke out which consumed the entire block. The company could find no legal ground upon which to refuse payment, altho they were firmly convinced as to the questionable origin of the fire. Later, in sending the check, however, the following comment was included in the letter:

"We note your policy was issued at noon on Friday and the fire did not occur until four o'clock of the same day. Why this delay?"—*Harper's Magazine.*

WHAT CONGRESS HAS DONE

(*From Any Respectable Republican Newspaper*)

Praise God, this is a country not easily ruined, or else the last Democratic Congress, recently adjourned, would have done it. Among the countless calamities which have occurred under this administration we have only space to note the following:

The worst war in history.

Closing of the Stock Exchange—the nation's financial bulwark.

Spots on the sun, causing some extremely annoying weather.

The war in Colorado.

Disgraceful peace with Mexico.

Uninteresting magazines.

Decline and fall of the Giants.—*Life.*

Efficiency Question Box 480
Conducted by Edward Earle Purinton

JUST A WORD

The second article by Mr. Purinton, entitled "Work and Efficiency," will appear in The Independent of next week. The present issue contains Mr. Purinton's first Question Box, in which a few of the letters resulting from the Efficiency Number of November 30 are answered.

Professor Robert DeC. Ward, of Harvard University, says of The Independent in a recent letter: "I like the Independent, better than any other weekly magazine or periodical, because: It is not overloaded, but discusses the subjects which are included in each issue, clearly, briefly, and logically. It has the shortest and best summary of the War News which I see anywhere. It is printed in clear type, on good paper, and the illustrations are better than those in most magazines. It is all I can really take the time to read, and it gives me the feeling that I am keeping up with the times at a minimum expenditure of my few available spare moments."

The first instalment of the Hon. John Bassett Moore's article on "The Past and Present Relations of the United States to the American Republics" will appear in next week's Independent. Mr Moore has been attached to the State Department under three Administrations, has traveled widely in the South American Republics, and consequently he brings to his subject an authority practical and comprehensive. This instalment gives a lucid interpretation of the movements which led to the adoption of the republican form of government by our Southern neighbors, and of the friendship—often interrupted but gradually growing stronger—between them and our own country. The second instalment, which will appear in the issue of January 4, will correct several misconceptions which now hinder mutual understanding and will consider the present significance of the Monroe Doctrine.

It is to be hoped that Mr. William V. Dennis of Moorestown, New Jersey, will forgive us for quoting, without his specific permission, but with grateful appreciation, the pleasant compliment which accompanied the renewal of his subscription last week. He says: "Permit me to add that I have never seen an issue of any magazine more vitally interesting or more genuinely valuable than your issue of November 30, with its efficiency articles. Your readers stand much in your debt for that issue alone."

Irvin S. Cobb, of the *Saturday Evening Post*, has written a story on the conditions in Belgium, France, Germany, Holland and England, which is being used by the American Red Cross to bring home to Americans the urgent need for relief in the countries affected by the Great War. Here are a few excerpts: "In Belgium I saw this: homeless men, women and children by thousands and hundreds of thousands. I saw them tramping aimlessly along wind-swept, rain-washed roads, fleeing from burning and devastated villages. I saw them living like the beasts of the field upon such things as the beasts of the field would reject. In France I saw a pastoral land overrun by soldiers and racked by war until it seemed the very earth would cry out for mercy. I saw districts noted for their fecundity on the raw edge of famine, and a people proverbial for their light-heartedness who had forgotten how to smile. In Germany I saw innumerable men, maimed and mutilated in every conceivable fashion. I saw people of all classes undergoing privations and enduring hardships in order that the forces at the front might have food and supplies. I saw thousands of women wearing widow's weeds, and thousands of children who had been orphaned. In Holland I saw the people of an already crowded country wrestling valorously with the problem of striving to feed and house and care for the enormous numbers of penniless refugees who had come out of Belgium. In England I saw still more thousands of these refugees, bewildered, broken by misfortune." With winter now upon them, the situation is tenfold more acute. The Independent has been authorized by the American Red Cross to accept contributions on behalf of the Relief Fund, and each donation of two dollars or more entitles the giver to membership in the Red Cross for the current year, and to receive a Red Cross Button—a symbol of participation in a great work of mercy.

VOLUME 80 MONDAY, DECEMBER 21, 1914 NUMBER 3446

THE STOCK EXCHANGE AND THE NEW DAY

AFTER one hundred and eleven days the New York Stock Exchange is open again. It was the last of the great exchanges of the world to close. It is the first of them to open. Trading on the Exchange is still restricted by a barrier of minimum prices, below which stocks and bonds may not be sold. But the Exchange is open. A free market for securities once more obtains. Market prices, determined by the law of supply and demand, are once more being made. The ticker is no longer silent.

On July 31, when the regular hour of ten o'clock came, the big gong did not whir out its warning signal, the chairman's gavel did not fall, the Exchange did not open. The other exchanges of the world were already closed. London, for the first time in its history, had failed to open on that very day, five hours before. It was a momentous problem that the governors of the Exchange faced as they gathered that morning. It would have been a splendid achievement to have maintained the only open market place in the world for trading in securities. But the achievement would have been superhuman. The whole world, thrown into panic by the upflaming of the conflagration in Europe, was rushing to sell. The brokers' offices were filled with selling orders, poured in by mail, by telephone, by telegraph, by cable. No market on earth could stand the strain, no market could have withstood the avalanche.

It is a curious phenomenon that is presented when a stock exchange closes. A group of men by their own voluntary act shut off their very means of livelihood. Unless securities are bought and sold brokers make no money; their sole source of income is found in the commissions on those same sales and purchases. For most brokers do not speculate themselves. So the act of the Exchange in keeping its doors closed was in a very real sense an act of self abnegation. In another sense it was an act of self preservation; for in a time of panic the broker himself runs a serious danger of financial disaster. But however mixt of these two considerations the motives of the Exchange in arriving at their determination, their action was in its effect a pure act of public service. A stampeded market, driven headlong by the charges of terrified sellers, menaces disaster for every owner of stocks and bonds, threatens to undermine the very structure of the financial world.

With ready wisdom they closed the Exchange. With persistent caution they have kept it closed for four months and a half. With admirable prudence they have, by successive tentative steps, opened it again to all but complete activity, while London is still tight closed and Paris has resumed little more than the semblance of activity.

During the hundred days the average broker has been a man without a vocation. But a little group in the Stock Exchange has been more intensely occupied than ever. A committee of five has worked more than day laborer's hours, with more than the intensity of the engineer of a flying express, with the forgetfulness of self of a religious zealot. On another page we print the portraits of the members of this committee, for we believe the country ought to know these men who, without price and with no hope of glory, have met a crisis of national gravity with consummate skill and fine public spirit.

IT has been their function to untangle the confused texture of trades and agreements and loans and debts that, always existing in Wall Street, are in normal times unraveled by natural processes and the passage of time. It has been theirs to provide emergency machinery by which holders of securities with urgent need of realizing upon them could dispose of them without disturbing general conditions. Theirs to make it possible for investors, ready to buy even in the abnormal situation of a closed Exchange and no ready market, to make their investments. In the hundred days more than a hundred million dollars worth of bonds have been sold and bought, more than a quarter of a million shares of stock. The machinery set up by the Committee of Five has made all this possible.

It has been their weighty problem to keep the Exchange closed while the danger lasted, to open the Exchange just as soon as the danger had lost its most serious acuteness, to invent means for going slowly but going surely toward a complete restoration of a free and unrestricted market for securities. How well they have performed their task the course of events has shown. The Exchange opened for the carefully restricted sale of bonds, and the price of bonds went up. The Exchange opened for the sale of stocks, with cautious limitations, and the price of stocks went up with a rush that surprized even the optimistic. No disaster has come and confidence has vastly increased. The crisis is well nigh past. The ship, freighted with security values and the financial wellbeing of thousands of security holders, has weathered the storm and sails a calming sea under lifting skies. She has been well piloted.

This critical time, if it is viewed aright, should have one beneficial result. It should bring the country to a better realization of the real function of a stock exchange and of the great service it renders not to the few, but to the many. We now know what it means to be without a stock exchange.

For a hundred days the owner of stocks and bonds has not known what his securities would be worth if he

wanted to sell them. The investor has had no ready barometer of the value of securities in which he is inclined to invest. Stock and bond holders have not known where to go to sell their holdings. Investors have not known where to go to buy. Banks and courts have not known where to find a trustworthy guide to security values. New enterprises depending upon public subscriptions to security issues for their capital have found themselves deprived of that indispensable aid in their undertakings, an open market place where the inherent value of their securities may be translated into prices thru the magic that lies in the unfettered activity of buyer and seller.

TO the careful observer it has been made apparent that if the closing of the Stock Exchange has put an end for the time to stock speculation, it has at the same time had vastly more serious and less beneficial effects. It must have shown to thousands that if the Stock Exchange were blotted out, elaborate readjustments would be inevitable in the whole business world.

The skill and care and the unselfish fidelity with which the situation has been handled by those in control of the Exchange machinery must raise the serious question whether better results would have been accomplished under a system of governmental regulation. It would be idle to pretend that this experience furnishes a complete negative to the proposal of any kind of state control. But it should give pause to any one who would rush into such an experiment without the fullest understanding of the useful functions of an open and free security market and the keenest appreciation of the real service it does for the whole community.

We are recovering from the first shock of the Great War. We are finding out that our first expectations of disaster were premonitions born of panic. We are awakening to the realization that a new day is before us—a day of opportunity, a day of promise.

If we have read aright one of the lessons of the hundred days, we shall find ourselves with clearer understanding of the place of the Stock Exchange in our business world. We needed to be without it for a while to know how necessary it is. It was well for us to see with what skill and industry and with what subordination of private interests to the public welfare the men who stand at the head of the Exchange would meet such a troubled time.

PEACE ON EARTH

"BLESSED are the peacemakers," said He whose advent was hailed with the angels' song, "Peace on earth, good will to men." Yet today the Prince of Peace looks down on a world at war, and with sad and stern aspect says, as once to Peter, "Put thy sword into its scabbard; for they that take the sword shall perish by the sword."

And perish they do by myriads on myriads, nations weeping their dead, too many to find mourning raiment for their sisters and wives. It is a sad Christmas Day for a hundred million homes, for what home is there of the great nations at war which does not mourn its dead and sadly rejoice if its crippled and maimed have returned?

Let there be a Christmas truce on Christmas Day, says a voice of holy pity from Peter's seat at Rome. A truce for Christmas Day! Why not a truce till He who came with Peace shall come again to confirm his reign of Peace over all the earth? Out of honor to the Prince of Peace shall they lay aside the bayonet and stop the cannon's mouth from one midnight to the next, and then, when the hour strikes, hasten to insult Him again with slaughter and blood? And these are Christians who provoke and create war, and baptize their swords in Christian blood, and summon Moslem and Buddhist to help them slay and slay. It is all a perverse horror, that cannot be explained away. "Turn the other cheek," said Jesus. "If he take your cloak, give him your coat also"; but they rob and burn and batter homes and temples of God. O generation of murderers, how can ye escape the judgment of perdition in this world, with strange mercy as the only hope for the next!

This is a sad Christmas Day. That will be a glad Christmas Day when grass has long grown green, over the graves of the slain and men shall have learned—alas! that it be so late—in deed as well as in word, the angels' song!

Yet with the war of sin and strife
  The world has suffered long:
Beneath the angels' strain have rolled
  Two thousand years of wrong;
And man at war with man hears not
  The love-song which they bring;
Oh hush the noise, ye men of strife,
  And hear the angels sing.

CULTURE BY THE SWORD

IN the year of our Lord 623 Mohammed, the son of Abdallâh of the tribe of Koreish, began to spread Kultur by the sword. He did not spell it that way, but that is a detail. His energy and his efficiency methods, combined with his outbursts of hysterical fury, were so prevailing that when he died in 632, in the manly prime of his early sixties, Arabia had been brought under his scepter. His successors carried the great work on. To Palestine, Mesopotamia and Persia, to Egypt, North Africa and Spain, they triumphantly bore their faith in one God and his prophet Mohammed, cheerfully committing all the slaughter dictated by "military necessity."

The "inferior civilizations" had curious vitality, however, and the efforts of the faithful to turn the western flank of the Christian allies failed. Partly in consequence of this misfortune, things began to go wrong on the eastern battle front. The Califate of Bagdad admitted "reverses" in 1258, and in 1492 the Moors withdrew from Spain to occupy "more advantageous positions" south of the Strait of Gibraltar.

Whether because the plans of the Mohammedan General Staff had miscarried, or because of "weakness" attributable to the acknowledged "pacificism" of their religion, the small Christian states of Europe developed a prejudice against the practise of propagating culture by militarism. They did not disavow the "duty to be strong," and some of them were unkind to heretics, but having only an "inferior" civilization they associated aggressive war with such material ends as territorial expansion, tribute money, and commercial opportunity. It is doubtful if they clearly visualized the comprehensive relation of bombardment and rapine to the religion

of Christ, or fully appreciated the value of reprisals upon non-combatants as a means of grace.

Yet Europe prospered notwithstanding its irresolution, and civilization, of a kind, made headway. Literature was produced, art showed a degree of vitality, and after a while the progress of physical science rendered possible a somewhat remarkable improvement in the material condition of mankind. All this possibly contributed to spiritual inertia. Ultimately an opinion prevailed that things were going well. In certain quarters, indeed, the notion arose and gained acceptance that war for any purpose or on any pretext was no longer necessary. Day dreamers began to talk of general disarmament and universal peace.

It was therefore with a measure of surprize that the world awoke in the early days of August last to realize that the virile pragmatism of the son of Abdallâh had not in fact gone from remembrance. It had found lodgment in the dutiful soul of a stalwart folk committed no less than he to the forcible expansion of culture.

Another surprize, milder but not uninteresting, was forthcoming when the "intellectuals" of the New Islamism began emotionally to appeal to an infidel world beyond the Rhine to "understand" them and their "culture," and, in particular, to hold their gunners guiltless of wrongdoing. This appeal has seemed to both the lay and the academic mind in America inconsequential, even inconsistent. It is at least perplexing. Islam, so far as we know, never explained or asked to be understood. There is no evidence that it cared what the infidel thought about anything.

We leave to the experts of international law the question of Germany's technical culpability, and the question of the propriety of action by neutral nations to demand of her an explanation of her conduct as a signatory party to conventions signed by them. The appeal of Germany's intellectuals is to public opinion. As humble contributors to that opinion it is our judgment and verdict, that upon the showing of facts thus far submitted, Germany has reverted to the theory and practise of Islam, and is attempting to spread her "culture" by the sword.

KNITTING WORK

ONLY a few weeks ago and they were all bending over diminutive tambourines, tho we never could make out just what they were doing or why they did it. It seemed such a waste of time to cut holes in cloth and then darn them up again with fantastic webs that would have baffled Arachne's skill before her metamorphosis. But the new fashion we can see some sense in. These thick gray woolen scarfs, full six feet long and one foot wide—they do look good and comfortable and we feel sure that the poor fellows in the trenches must be more grateful to get them than anybody ever was to receive a skeletonized doily or a perforated pocket handkerchief as a Christmas present. Such has always been woman's work, to mitigate the discomfort of misfortunes she is unable to avert. She has known how to transmute her emotions into garmenture, and now, while man is arguing about who is to blame for the war and how it might have been prevented, her needles are clicking and the worsted web falls from her lap in a steady stream that reaches to Belgium and beyond.

But quite regardless of the blessing that it brings to soldiers, prisoners and refugees on the other side of the Atlantic, this revival of one of woman's lost arts is not without its incidental advantages at home. The department store sells hundreds of pairs of wooden needles now where formerly they sold as many decks of bridge cards, and Scotch yarn is cheaper than silver salad forks. The needles are a bit inconvenient on the cars during rush hours, for the Interborough does not allow twenty-eight inches of lateral space per person, but they are not so dangerous as the hat pins used to be, for they have knobs instead of points on the ends. It reminds us of "dear Paree" to see a *tricoteuse* in charge of the news stand and doubtless she is better employed than in reading the flashlight literature spread out before her. Knitting work does not interfere with feminine concentration of thought or conversational ability; indeed, it is proverbially supposed to facilitate the latter. Speakers at chautauqua assemblies are sometimes disconcerted at first to see nearly half their audience with some form of fancy work in hand. But when they find out that this really gives them a more attentive and less captious bearing, they come to like the custom. Men take to tobacco more because it gives them something to do than for love of nicotine. But a cigar goes off in smoke, while the knitter, doubtless deriving as much enjoyment from the exercize, has something tangible to show for it at the end. Perhaps the needle has come back just in time to save woman from the cigaret, for which she was already reaching out.

CITY MANAGING—A NEW PROFESSION

WHEN eight men met in Springfield, Ohio, at the beginning of this month and founded "The City Managers' Association," there was proclaimed the existence of a new profession—city managing—and there exprest itself a new and conscious force for efficient municipal government in this country. Since March, 1908, when Staunton, Virginia, put its government into the hands of one man and appointed Charles E. Ashburner, now manager of Springfield, its "city manager," the movement has spread until now there are seventeen cities under the commission-manager form; two more have recently adopted the form and a number are to decide the question very shortly. The development has, therefore, not been as rapid as that of the commission plan, but this is natural since the manager plan is a step ahead. Those cities which are ruled by a manager have achieved remarkable results in efficiency and economy—and they are more than satisfied. Probably no mayor of a city has ever had such whole-souled support from his citizens as Manager Henry M. Waite of Dayton. It was therefore not professional conceit from the city managers at this convention when, in the words of Manager Kenyon Riddle of Abilene, Kansas, they hailed the form of government which they represented as the one most nearly embodying "honesty, system, fairness, harmony, expertness, abolition of rotten politics and consideration of every employee."

The most important theme discussed was, naturally, the training of the city manager. What qualities and education should a man have to fit him to be a leader in

the new fight against civic corruption? It was significant that of the eight managers present, six were engineers, one the clerk of a district court and one a business man. Yet these men decided that while a technical education is very desirable, business and executive ability, common sense and honesty were the principal qualifications. Manager Ashburner, president of the association, asserted that it would be on the character of the city manager that the success of the form would depend, and Manager Waite said a city manager should have a fair education, sufficient theory, but not enough to overbalance practicality, and must have honesty and the courage of his convictions. He advised young aspirants to city managing to go to work in a misgoverned city and learn. And perhaps the most important expression of faith in the new government was the announcement that the University of Michigan has established a course designed to fit men for the duties of city manager—a course requiring work in nine different departments. Perhaps in the hands of the future city managers thus trained lies the good government of our cities.

THE NATION'S WORK AT HOME

THE nation's care for the nation's possessions and responsibilities at home is confided in good part to the Department of the Interior. This is, or ought to be, under proper conditions, the most important of all executive departments. Its duty is to see to it that the general interests of the people are protected under the laws, so that they can in the most comfortable way make a living, be intelligent, moral and happy. This department ought to be provided, for its multiform duties, with an expenditure greater than any other, or perhaps than all others combined. Even in the present imperfect conditions, with hundreds of millions spent in making provision by land and sea for a war that ought never to come, and for pensions for wars that are past, it is developing a larger and larger work for the benefit of the people. This appears when we count up the various bureaus and administrative sections embraced in its care. It has full charge of our Indians passing out of tribal into citizen life; of the Patent Office, the Pension Office, the Bureau of Education, the Geological Survey, the Reclamation Service, the Bureau of Mines, the care of Alaska and Hawaii, the national parks and reservations, and other minor services. The new Departments of Commerce and Labor have relieved that of the Interior of some of its too great burden.

The annual report of the Secretary of the Interior, Franklin K. Lane, deserves editorial attention. The pages devoted to the Indian service are distinguished by unusual eloquence and express great gratification that the American people are so resolved to bring the Indian into full citizenship and to teach him to take care of himself. During the past year the Cherokees have ceased to exist as a tribe and are voters. "The word of the white man has been made good." "Surely there is something fine in this slight bit of history." We would have liked a more emphatic statement as to the efforts that should be made to protect the Five Tribes from the multitude of people in Oklahoma who think it a privilege to fleece these Indians, particularly minors who have come into possession of rich agricultural or oil lands. But when the Oklahoma delegations in the Senate and the House are against the Indians, what can the Secretary do?

The last pensioned soldier of the Revolutionary War died in 1869, and the last soldier of the War of 1812 died in 1905. But of the Civil War there are 429,354 living, and 33,639 died during the year; and the amount paid in pensions last year was over $172,000,000, which is one item of what war costs after war is over.

The Bureau of Education has no authority over education, except in Alaska, where it is doing the best possible under unsatisfactory conditions. Its main work is the collection of information and giving suggestions and help all over the country. It is quite as well that we have not a hard and fast system of education all over the country, as they have in Germany and France, or cultural education would suffer.

One would hardly think that Hawaii needed much Federal care, as the people are well able to care for themselves. Hawaii has been generous in support of education, but is criticized in this report because the education has been too much given to "advanced theories of a pedagogical or ethical type," and it is advised that there be a return to "a sound, not theoretical, education," by which appears to be meant an industrial education, which is the fad of the day, gardening, dairying, storing and cooking—what is called practical.

We turn with special satisfaction to the Reclamation Service, which provides irrigation already for 1,343,193 acres of excellent farm land, and provision for nearly a million more is under contract. This new service, initiated twelve years ago, last year resulted in the production of over fifteen millions in value of crops, and it is but a beginning. This service should be generously provided with appropriations to expedite the beneficent work it has in hand.

These few points taken from the report indicate a good year's work and the value of the Department of the Interior to the country.

DUM-DUM POSTCARDS

THE humanitarians need not be discouraged over the slow progress of the movement against unnecessarily cruel weapons of warfare. Both belligerents have voluntarily taken a step in this direction that goes farther than The Hague has yet suggested. The British and French military authorities have prohibited the forwarding to the firing line of postcards bearing caricatures of the Kaiser and Crown Prince, alleging as the reason that prisoners taken with such pictures in their possession are liable to "summary treatment" under the German military code. The German Government has gone farther and warned the shopkeepers thruout the empire not to mail or expose for sale the more or less vulgar caricatures of enemy rulers which the animosity of the war has brought out. Perhaps when peace has come this policy may be continued and extended to ordinary people, who have their feelings as well as royalty. A ruling against the employment of cruel and unusual punishment by postcard on February 14 would be a welcome indication of advancing civilization.

THE STORY OF THE WEEK

British Naval Victory

Great Britain is now mistress of the seas and British ships may voyage to any part of the world outside the North Sea with little danger of German attack. The capture of the "Emden" at Cocos Island in the Indian Ocean and the destruction of the German fleet near the Falkland Islands in the South Atlantic leave but few German warships at large and none of these of much importance.

The details of the last victory are yet to be learned, but it appears that the German fleet, after sinking the British cruisers "Monmouth" and "Good Hope" off the coast of Chile on November 1 made its way from the Pacific to the Atlantic by way of the Strait of Magellan or around by Cape Horn. Here it was met on the morning of December 8 by a British fleet under Rear Admiral Sir Frederick Sturdee which had been sent out from England for the purpose. The German cruiser "Scharnhorst," the flagship of Admiral Count von Spee, was sunk two hours after the engagement began and the "Gneisenau" two hours later. These were fast armored cruisers built less than ten years ago. The minor vessels of the squadron, the protected cruisers "Leipzig" and "Nürnberg," tried to escape, but were run down by the British vessels and also sunk. The cruiser "Dresden," the last of the fleet, is reported to have escaped to Punta Arenas, on Magellan Strait. The German loss of life is estimated at three thousand. The English lost only seven men.

The Ypres Canal

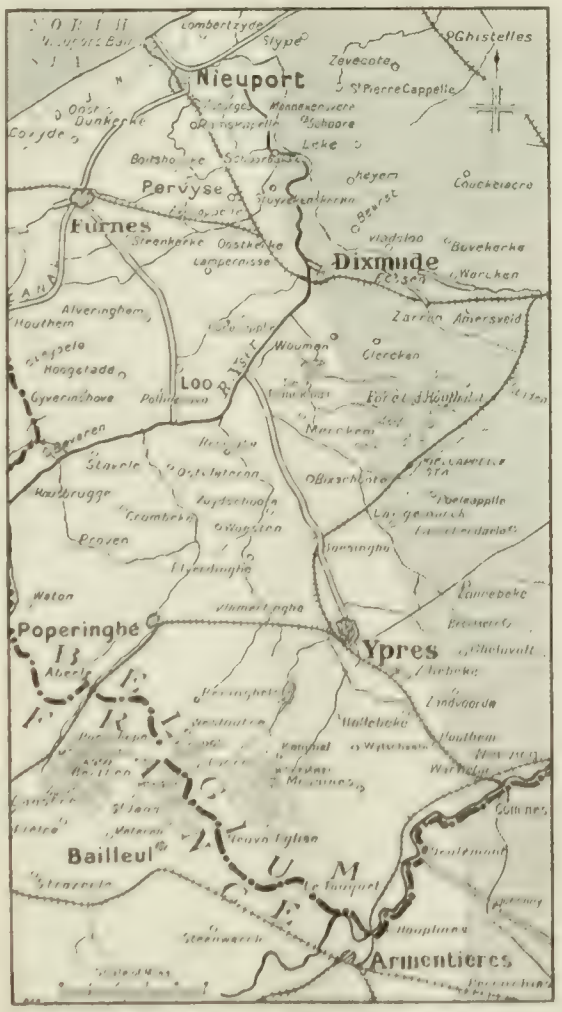
The ten-mile canal which connects the town of Ypres with the Yser River and ordinarily serves the peaceful purpose of shipping sugar and butter to England seems likely to be as famous in history as the sunken road at Waterloo. To carry this line the choicest troops in the German army have been sacrificed by thousands, but in vain. Even the Prussian Guards under the eye of the Kaiser in person could not cross the moat that barred the way to Calais and the English Channel.

Near Merckem and some two miles from the Yser the canal is crost by a little bridge which both sides had spared because they hoped to use it. At the western end stood the house of the man who ran the ferry before the bridge was built. The ferryman's house had been made into a fort by the Germans by mounting machine guns on the lower and upper stories which commanded the bridge and the canal in both directions.

THE GREAT WAR

December 7—Serbs defeat Austrians and retake Valievo. Russians defeat Austrians and Germans south of Cracow.

December 8 — German cruisers "Scharnhorst," "Gneisenau," "Nürnberg" and "Leipzig" sunk by British off Falkland Islands. Germans drive Russians east from Lodz.



December 9—Germans storm Przasnysz, in northern Poland. Kaiser reported ill with influenza.

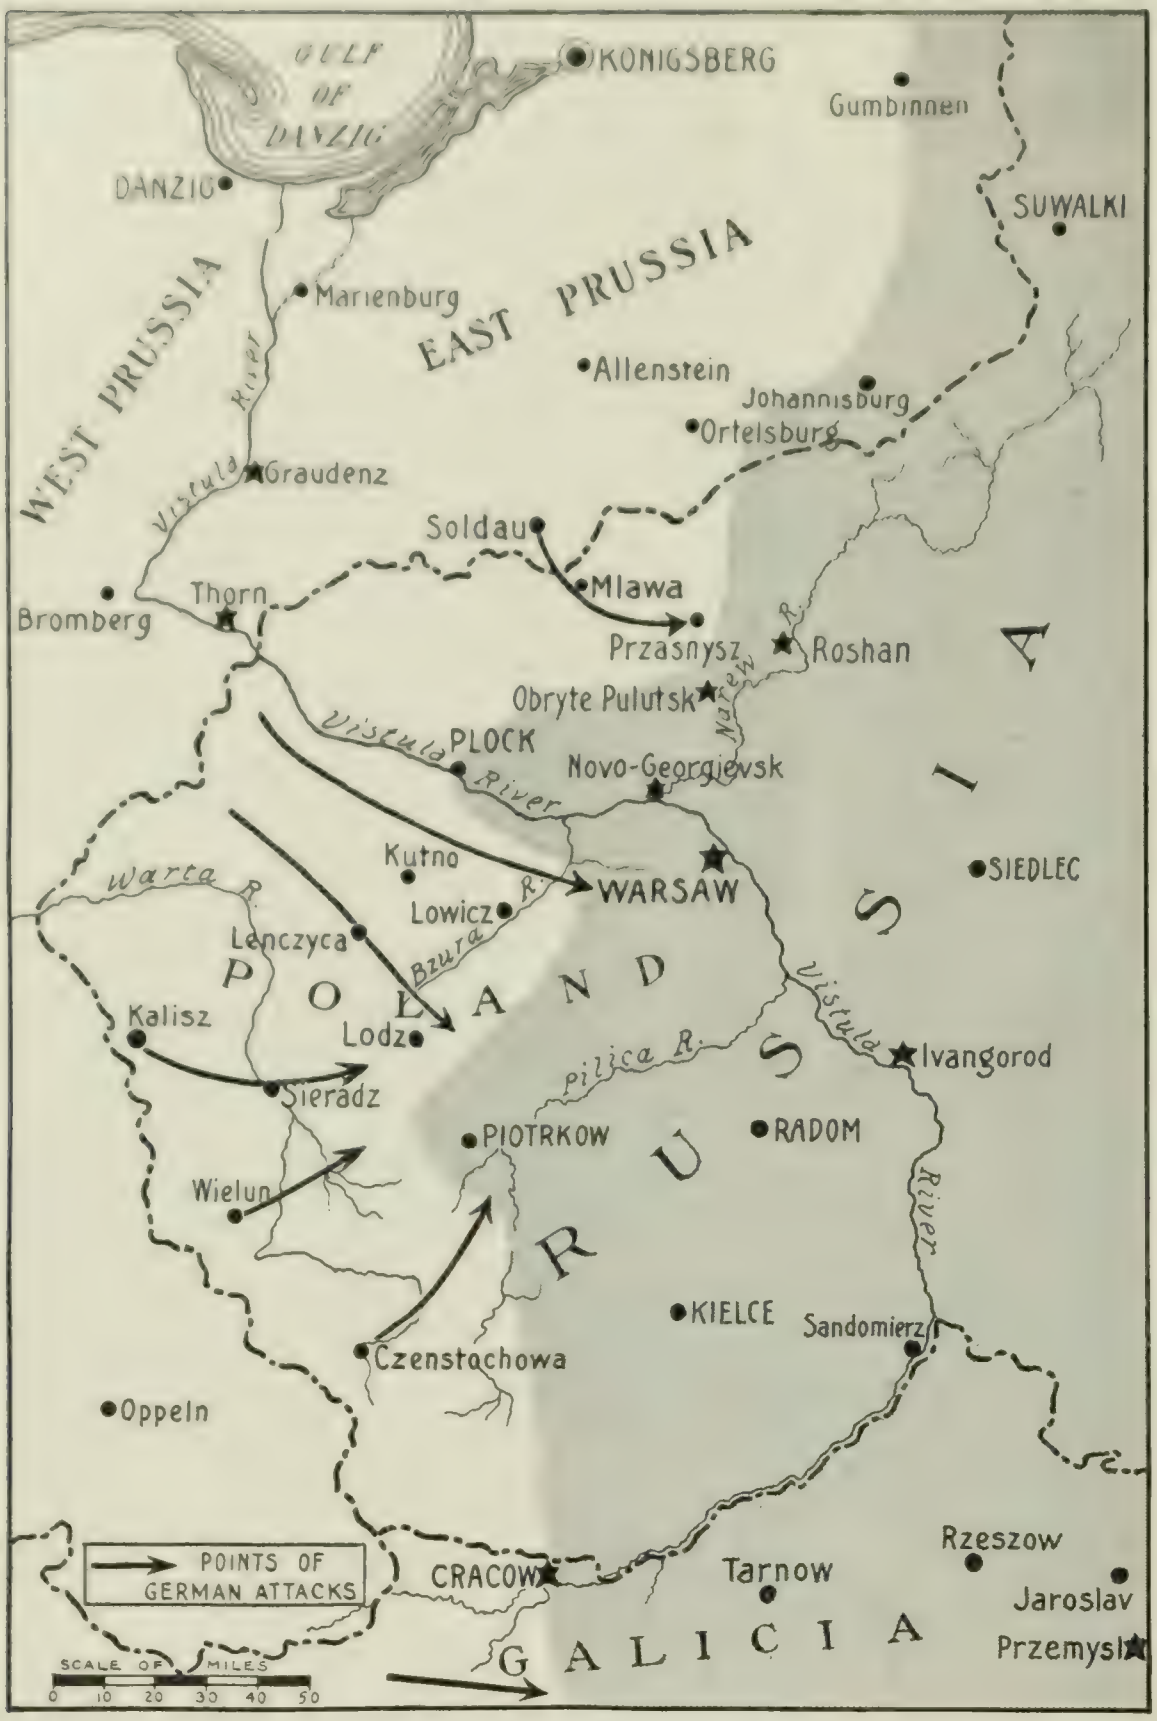
December 10—Allies gain west bank of Yser river and canal. German submarines enter Dover harbor. Premier Botha announces Boer rebellion at an end.

December 11—French take Aspach in Alsace. Serbs take 4777 Austrian prisoners.

December 12—Turkish warship "Goeben" bombards Batum, in Russian Transcaucasia. French trying to break German line between Metz and St. Mihiel.

December 13—Austrians regain Neu Sandec, southeast of Cracow. Germans and Russians in conflict along Bzura river in Poland.

THE FLANDERS BATTLEFIELD



The Allied troops have crossed the canal connecting Ypres with the Yser and are attacking the German entrenchments west of Merckem, Bixschoote, Langemarck and Passchendaele. In this map the shaded portion represent, in a general way, the area held by the Germans. The double lines indicate canals

The Allies having determined to push the attack between Dixmude and Ypres, it was first necessary to take this bridge. Volunteers were called for and four hundred chosen, among them a hundred Africans. Under command of a young French lieutenant they dashed across the bridge at midnight of December 3 in spite of the leaden hail from the machine guns, which more than decimated their ranks. The Germans held the outer walls as long as they could; then barricaded themselves inside the house and fired thru the loopholes. The door was broken down with an ax and the French fought their way into the lower rooms and up the stairway. With bayonet and knife they cut down all of the defenders except a few in the last of the upper rooms, who escaped slaughter by surrender.

The possession of this bridge gave the Allied troops access to the western bank of the canal at any time and they have pushed their raids in this direction halfway to Roulers. The Germans have withdrawn all of the men they can possibly spare from France and Flanders to aid in the Polish campaign and the Allies are taking advantage of this to make attacks all along the line from Alsace to Nieuport. They report gains at many points, but none of sufficient magnitude to show upon the map.

The Interlocking Countries

In order to get a clear idea of the meaning of the campaign on the frontier of Germany and Russia, with its swift movements and sudden reversals of fortune, we must understand that all the fighting so far has taken place outside the fortified lines of defense of both countries. It is one of the many evil results of the successive partitionings of Poland that the final boundary was drawn with as little regard for strategic requirements as for ethnic affinities. For instance, the Vistula, which Ruskin called "the moat river of Europe," would have made a well defined and easily defensible dividing line, but instead we see Prussian territory extending 125 miles to the east of the Vistula, and Russian territory extending the same distance to the west of it. Consequently each country had the other outflanked at the start of the war, and the struggle ever since has been to see which should make the

THE POLISH SEAT OF WAR

The German attacks are all directed toward Warsaw, the Polish capital, which stands near the apex of the angle formed by the Russian fortifications along the Vistula and Narew Rivers. Some of the hardest fighting of the war has taken place about Lodz and Lowicz, which are now held by the Germans. The army of General von François from Mlawa has taken Przasnysz, but its advance has been checked by the Russians. The territory under Russian control at the end of the second week of December is indicated by shading

most of its advantageous position. Thus the Russians were able at once to invade East Prussia from the east and south, and Galicia from the east and north. On the other hand, the German and Austrian forces, when they assumed the offensive, were able simultaneously to invade Poland from the north, west and south.

Because of this unfortunate interlocking of the belligerent countries it has been impossible to protect the frontier by a double line of fortresses such as face one another on the Franco-German border. Each country has been obliged to place its fortified frontier a considerable distance inside of its national boundary, leaving a strip of territory more than a hundred miles wide between the lines. Over this debatable land the contending armies have been marching back and forth for five months, and neither has yet made a breach in the other's line of permanent defenses.

The German-Austrian line of defense consists of a chain of fortresses stretching in a great westward bending bow from the Baltic Sea to the Carpathian Mountains, as follows: Königsberg, Danzig, Graudenz, Thorn, Posen, Breslau, Glatz, Cracow, Przemysl. The Russian line of defense in Poland forms a right angle pointing westward; one leg of the angle is the Narew River and the other is the Vistula, and the apex is the junction of the two rivers near Warsaw, where is placed the fortress of Novo Georgievsk. Along both these rivers there are fortresses, of which it is sufficient to mention those appearing in the news of the day—Ivangorod on the Vistula, and Roshan and Obryte Pulutsk on the Narew River. A glance at the accompanying map will show the situation better than pages of description.

The Campaign in Poland

It is against the Russian fortifications along the Vistula and Narew that the Germans have directed their attack. Once they almost reached these rivers, but were driven back before they could try their Krupps against the Russian fortresses. Now they are again almost within gunshot, but it is uncertain whether they will be able to hold the ground they have gained. East of Lowicz the Germans are said to have advanced to within fifteen miles of Warsaw, but this can hardly be regarded as a safe position so long as the Russians hold the southern side of the Vistula between Plock and Novo Georgievsk. Here has been the hardest fighting in the week since the taking of Lodz.

The new movement in this field is the advance into Poland of the army from Soldau in East Prussia. This is under the command of General von François, a descendant of the Huguenot exiles who, driven from France by the revocation of the Edict of Nantes, contribtued greatly to the strength of Prussia, as they did to Switzerland and the United States. His army crost the frontier at Mlawa, but instead of moving south along the railroad which leads to Warsaw it struck eastward and captured the town of Przasnysz (pronounced *Pzhas-nish*).

General von Mackensen holds the line between Lowicz and Lodz, while the German and Austrian armies from the southwest are attacking the Russian position near Piotrkow. Both sides are obviously exhausted by their terrible losses in the fighting about Lodz, which appears to have been the fiercest of the war. A German unofficial despatch asserts that the Russian losses here amount to more than 150,000 men, of whom 80,000 were taken prisoners. On the other hand, the Russians claim that more than 100,000 Germans were killed and 20,000 captured. Of course the estimates of an enemy's losses are never accurate and usually ex-

aggerated, but from the details now beginning to come in it cannot be doubted that the casualties in the fighting between November 16 and December 5 while the Germans were driving the Russians from their positions about Lodz were extremely heavy. At one time there were 700 guns in action all night, while the Germans in close formation repeatedly charged the trenches held by the Siberian rifles. The bodies of the slain covered the field and in some places lay in heaps four feet high. The Russian troops from central Asia, the Kirghizes, Turco-Tartars and Bashkirs, fought like devils, say the German prisoners, and many dead were found cloven from shoulder to belt by their blows.

Lodz is an important manufacturing center particularly in the textile industry, which has been built up there by the Germans. If the Russians fail to regain it they will find it hard to get clothing for their soldiers. The city suffered severely by the bombardment, which the Germans continued longer than was necessary, for they did not discover that the Russians had evacuated the city until fifteen hours after they had left.

The Attack on Cracow The Russians in Galicia have Przemysl closely invested and are drawing the lines about Cracow in spite of the eastward movement of the Germans in Poland. Cracow is defended on the north by an army under the Austrian General Dankl and on the south by an army under the Archduke Frederick. Both these forces as well as the garrison of the fortress are composed of Austrian and German troops together and are under the general command of the German General von Hindenburg.

The Russian forces attacking Cracow are under the command of the Bulgarian General Dimitrieff. This army advanced along the railroad from Lemberg with its right on the Vistula and its left on the slopes of the Carpathians, a front of about fifty miles. The right last week had reached Wielliczka, where the deep salt mines are and only a few miles from the outer ring of the Cracow fortifications. In order to prevent the investment of the city on the south the army of the Archduke was reinforced by German troops withdrawn from Czenstochowa and Austrian troops from Belgrade—an unwise removal, as the Servian victory showed. With this force the Archduke attacked the Russian left on the Carpathian side December 5, but was repulsed with great slaughter.

On November 24 the Austrians in Cracow made a sortie at night intending to take the Russians by surprize, but they found the enemy had been informed of the movement and were ready for them when they made their attack at two o'clock in the morning. It is said that of the 15,000 men who left Cracow on that sortie only 2000 got back.

Austrians Defeated in Servia Again the Austrians have suffered an ignominious defeat in Servia. Their victory at Valievo brought them south of Belgrade and forced the Serbs to evacuate that city. They then seemed to assume that with the capture of the former capital Servian resistance was virtually at an end, so they began to withdraw troops for service against the Russians in Galicia, leaving three army corps to complete the conquest of the country. Two of these advanced southeast into the interior, following down the Morava River in the direction of Nish, the temporary capital of Servia. The Servian troops which had withdrawn from Belgrade toward the east when it was seen that that city could no longer be held, united with the rest of the army and struck at the Austrian center, near Chachak, about sixty-five miles south of Belgrade. Led by the aged King Peter in person, the Serbs broke thru the Austrian lines and, as formerly, the Austrians were unable to rally, and the defeat became a rout. The Serbs chased them right and left, driving one wing north by Valievo and the other south by Ushitza, recovering both these towns and taking many prisoners and much booty. The

THIS IS WHAT A MINE REALLY LOOKS LIKE

A floating mine which has broken from its moorings and has come ashore on the British coast

acccount of the victory from Nish does not, like former reports, deal in round thousands, but is very specific, and states that in the fighting between December 3 and 7 the Serbs captured 121 officers and 22,114 men, 68 field pieces, 42 quick firers, 8 mortars, 10,000 rifles, 59 wagon loads of ammunition, 1305 transport wagons, 10 hospital wagons, 4 ambulances, 2 treasury safes and 327 horses.

We may find some explanation of this sudden reversal of fortune in the report that four Czech regiments mutinied on the battlefield, refusing to fight longer against their fellow Slavs. There are also renewed rumors of Russian reinforcements having reached Servia, the latest form of the rumor being that troops were shipped from Archangel to Antivari, the seaport of Montenegro. This is probably as unfounded as the report circulated earlier in the war that Russian troops, variously estimated from 40,000 to 250,000, had been sent from Archangel thru Scotland and England, and landed in France. The port of Archangel was recently reported to be still open, so it apparently was not impossible for troops to get out that way, but if there are any Russians in Servia it is much more likely that they were brought up the Danube from Bessarabia. This would, indeed, require the compliance of Rumania, but according to the treaty of 1878, Rumania agreed to allow Russian troops to pass thru her territory at any time. Rumania some time ago put a stop to the passage of German officers and munitions being sent thru her territory to Turkey, so she has already practically cast in her lot with the Allies. The campaign in Servia seems insignificant in comparison with the larger operations in France and Poland, but it is nevertheless important, for upon its issue depends the question of the entrance of the other Balkan states and Italy into the war.

Congress in Session The regular session of Congress opened quietly on the 7th. In the House the welcome given to Speaker Clark was noticeably warm and hearty. Women knitting for the soldiers in Europe or for the members of their families were seen in the galleries. On the second day, at a joint session, the President delivered his annual address, which has already been considered in The Independent. It is understood that in this short session the annual appropriation bills will have the right of way. Next in order will be the conservation measures, the Ship Purchase bill and the bill which relates to the government of the Philippines and promises ultimate independence to the islanders. The Ship Purchase bill, which has the President's support, will be vigorously opposed. In the Senate, the Immigration bill (past by the House) is a subject of debate. Those who oppose it object to its literacy test.

Just before the adjournment of the recent session there was a controversy about measures for the relief of cotton planters, and it was agreed that these measures should be considered promptly at the beginning of the new session. Representative Henry's bill for an issue of bonds to be loaned to planters has already been rejected. Mr. Tribble, of Georgia, has introduced a resolution for an investigation of the New York Cotton Exchange. He asserts that after the recent reopening of the Exchange the price of cotton was "hammered down" nearly one cent a pound, and that the Exchange, or persons trading in it, thus "fleeced the planters." Such an investigation as he desires, he says, would probably cause prosecution of the fleecers and might result in the abolition of the Exchange.

It has been decided that the House shall vote upon the two proposed constitutional amendments, one for national prohibition of the liquor traffic, and the other for national woman suffrage. Eight hours of debate will be allowed for the first and six hours for the second. The discussion will begin on the 22d. The prevailing belief is that the required two-thirds vote in the affirmative will not be cast for either of the propositions.

National Defense The questions raised by Representative Gardner's resolution for an inquiry as to the condition of our national defenses have been prominent subjects of discussion in and out of Congress. President Wilson told Mr. Gardner that he opposed the method suggested because he thought it was an unwise way of handling questions which might create very unfortunate international impressions, but he was in favor of the fullest inquiry by the regular committees of Congress. Last week these committees heard the testimony of Secretary Daniels, Admiral Fletcher, Admiral Badger, General Scott and others as to the condition of the navy and the army.

The House Committee on Rules, by a party vote of 5 to 3, refused a hearing on the Gardner resolution. Mr. Gardner, speaking in the House, criticized the President's policy and views. Mr. Hull said that war scare

agitation was due to jingo statesmen and manufacturers of war supplies. Senator Weeks opposed publicity, but would have the army and the militia supplemented and strengthened by reserves. The National Civic Federation has adopted a resolution asking Congress to create a Council of National Defense, which shall inquire and report. In New York, a committee of prominent men has called a meeting, to be held on the 18th, for the organization of an anti-armament association.

Colorado's Strike Ended

In obedience to a recommendation from the executive board of the United Mine Workers, the district union in Colorado by unanimous vote, on the 8th, ended the memorable strike at the coal mines, which was ordered in September, 1913. The money cost, for the strikers, has been estimated at $9,000,000, and at least sixty-six persons have been killed. The action now taken is due partly to the appointment of a mediation commission by the President. "We deem it the part of wisdom," says the board, "to accept his suggestions and terminate the strike." But it is added that the union men make no surrender and will continue to propagate the "principles" of their "humanitarian movement thruout the coal fields of Colorado." For some time past the Federal Commission on Industrial Relations has been taking testimony about this labor war.

The Federal troops will not be withdrawn at present, as Governor Ammons is not ready to accept the responsibility which the retirement of all of them would impose. The new mediation commission has been organized. Seth Low is the chairman. It will not go to Colorado now, but the members of it will confer from time to time in New York.

SUNSET IN BELGIUM: GERMANY ON GUARD

That is the way the German dealer labelled this picture. It is a pretty thought

Government Annual Reports

All of the executive departments at Washington have submitted their long annual reports. We refer to the leading statements or recommendations in them. Postmaster-General Burleson repeats his recommendation of last year that the telegraph and telephone systems be taken over by the Government. For carrying the mails, he says, the railroads should be paid by space instead of by weight, and the postage rate on second class mail matter (newspapers excepted) should be increased from 1 cent to 2 cents a pound, as about 6 cents a pound is the cost of handling it. Labor Secretary Wilson expresses his conviction that probably there would have been no strike in Colorado or at the Michigan copper mines if the principal owners of the property had been on the ground and personally in charge. The Attorney-General asks for amendment of the commodities clause of the Interstate Commerce law, so that railway companies may surely be prevented from carrying articles produced by themselves or by corporations having the same controlling stockholders. Sixteen Trust cases were disposed of in the year, and forty-seven are pending.

Secretary Daniels asks for two battleships, six destroyers and eight submarines, saying that these additions will make a well-rounded navy, equal, if not superior, to any in the world, "ship for ship and man for man." The Navy General Board says the additions should be three times as many, including four battleships, sixteen destroyers and sixteen submarines. Secretary Garrison recommends that the army be recruited immediately to its full war strength by adding 25,000 men and 1000 officers. This, making a total of about 120,000, would give a mobile force of 50,000 for the continental United States.

The Secretary of the Treasury urges that the emergency war taxes be continued until the arrival of peace in Europe. The Interstate Commerce Commission seeks legislation for control of railway capitalization, to confirm the commission's authority to examine railway books, and to compel the use of steel cars in passenger trains. The Secretary of Agriculture says aid should not be given directly to farmers by the use of Government cash or credit. Pointing to the great crops, he deplores the decrease of cattle, sheep and hogs. Secretary Lane recommends that we should gradually but surely increase the number of Indians who are not wards of the Government and to whom independence and responsibility are given. Reviewing

Mexico's New Leaders

Villa and Zapata had a conference at a village near the Mexican capital. Mr. Carothers, an agent of our Government, was present. The two leaders published a statement, saying that they would work together and would retire to private life after finishing their fight for the people. At the end of the week there had been no confirmation of the reports, circulated by Carranza's agents, that the two had quarreled, that each had denounced the other in proclamations, and that war had broken out between their armies. At the head of a grand procession, said to have been the most impressive military exhibition ever seen in Mexico, they rode side by side thru the streets of the capital and entered the palace, where they were received by President Gutierrez and the foreign ambassadors. "Like General Villa," Zapata says, "I do not want any office and will never accept one. If the United States should be at war, we should fight for her. If Mexico should be at war with another country, the United States should help her. I promise to do everything in my power to make the two countries the best of friends."

The convention will assemble again on January 1 and select a Provisional President. Zapata's candidate is Emilio Gomez. Villa would give Gutierrez another term. But both may accept General Angeles, who is Villa's intimate friend. Carranza has remained in Vera Cruz, where martial law has been proclaimed. He has taken over, for his Government, the railroads, telegraphs and telephones. There has been but little fighting in southern Mexico. Villa and Zapata have planned several expeditions—one to Vera Cruz, one to Guadalajara, another to Tampico, and one to Saltillo. In the far south the controlling forces are coming over from Carranza to Gutierrez and the convention. In the vicinity of Tampico Villa has gained nothing. In the north he is weak.

The Problem at Naco

Maytorena's attack on Hill's Carranza garrison at Naco, on the Arizona border, was continued thruout the week. The boundary line divides the little city, the American part of which has suffered during the two months' siege. About fifty persons on American soil have been wounded by Mexican bullets, and seventeen of these were United States soldiers stationed there. Of these seventeen, one died of his injuries, one lost his sight, and several are still seriously affected. The residents of the American town sent urgent appeals for protection to the President and their Senators. They were assisted by the Governor of Arizona. Many believed, however, that protection would involve a change of national policy, because it could be assured only by invasion of Mexico by our troops.

Underwood & Underwood.

AN ADMIRAL WHO WON

Rear Admiral Sir Frederick Charles Doveton Sturdee, who was detailed from his post as Chief of the British War Staff to crush the German cruiser squadron in the South Atlantic, and succeeded in sinking four German cruisers

After a Cabinet meeting, on the 8th, Secretary Garrison sent three batteries of field artillery to Naco and placed General Tasker H. Bliss in command. There was no change of policy, it was announced, but he was to await orders. On the day of General Bliss's arrival he had a narrow escape, as two bullets past within a few feet of himself and his staff as he was making an inspection near the line. Our Government sent emphatic and peremptory notes to Carranza and Gutierrez, saying that if the firing across the line did not cease, our troops would stop it. On the following day another American soldier was wounded. Gutierrez promptly replied that he had ordered Maytorena to suspend hostilities if he could not go on without firing across the line. There is evidence that his order was sent to Naco, but Maytorena denied that he had received it.

After two or three days' delay, Carranza answered, saying that if the firing should be stopped by force this would be "regarded as an unfriendly act, notwithstanding the friendly motives cloaking it." The use of force, he added, would tie Hill's hands and assist Villa. On the 13th, two persons on American soil were wounded, and Maytorena still insisted that he had received no restraining order.

FAIR PLAY FOR BIG BUSINESS

BY W. C. VAN ANTWERP

GOVERNOR OF THE NEW YORK STOCK EXCHANGE

THE singular flabbiness that steals over the average man after he has reached a phase of social development which we call culture, has had several hard knocks of late. Cultured lethargy is often a by-product of material prosperity; when business came to a standstill the man whose happiness depended upon it found himself forced into meditation. To such a man meditation foreshadows action, and action is the one essential in the new movement for fair play.

James J. Hill made a stirring appeal for fair play in an address at Rochester last week. When the applause had subsided, the next speaker, Martin W. Littleton, arose. "I am delighted to hear you applaud Mr. Hill's speech," he said; "he has appealed to your citizenship; you are imprest; you feel that henceforth you are to bear your measure of the burden of our difficulties. But tomorrow you will have forgotten it. You will do nothing, with great nobility of character, no doubt, but nothing, nevertheless. The trouble is that you are too lazy to fight and too fat to run away." There was a pause, and then the roof came off.

When Texas and Missouri recently declared for fair play to big business and especially to the railroads, the last disheveled remnant of the muckraking brigade surrendered. Today the press is clamoring for increased freight rates; the President says business men may now tread with security the Royal Road to the City. There is no doubt of the earnestness and spontaneity of the new movement; even those who are too lazy to fight and too fat to run away are asking to be sent to the front. The fight for fair play is the one attractive fight that has been staged in America for many years; more than that, it is exhilarating; it even threatens to become popular.

We have wasted a generation in finding out that criticizing reform measures at long range is bad citizenship, for we must have reform or progress stops. If we want the right kind of reform we must stop being lazy and fat, get into the game, and crowd out the reckless radicals who have monopolized it. If hard times have brought this result about, they have also revealed one of the sweet uses of being humanized thru adversity.

One of the first and best convictions that dawns upon the mind of the man who is thus stirred is that much of the legislation that he has most freely criticized has produced a vast amount of moral good. When, for example, the Interstate Commerce Commission was given supreme authority over the railroads in 1910, the average flabby patriot who merely criticizes at long range thought it a dreadful menace to private property. He knows today that, while it is too much to expect a commission of seven men at $10,000 a year to run the railroads, telegraphs, telephones, wireless apparatus, pipe lines and everything else down to ferries and upper berths, besides watching the operations of forty-four lawyers and Mr. Brandeis, five hundred detectives and twice as many clerks—still, government regulation has come to stay. In its present form it is far from satisfactory, but in theory the railroads themselves endorse it and would vigorously oppose its abolition. Railway managers and owners are now so firmly in its favor that they are asking for an extension of it in the shape of a federal charter. "Destroy the Church of England!" said Charles Buller; "you must be mad! It is the only thing between us and real religion." To destroy the Interstate Commerce Commission would be equally mad. It is, or it will be, the only thing between the railroads and that form of real supervision which spells government ownership.

It was the same way with the Sherman law. The average cultured critic from the fastness of his easy chair proclaimed its enforcement confiscatory. The public prosecutors were delighted with it; everybody else thought it marked an end to private property. When the Supreme Court said that the law must be interpreted by the rule of reason the situation was reversed; private citizens were delighted and public prosecutors dejected. They said if reason had anything to do with the law the devil himself must have got into it. Today it is a pretty good law; at any rate, we should hate to see any more tinkering with it.

Two essentials present themselves in considering any good work, if by work we mean service: There must be plenty of it, and it must be worth doing. Both these essentials are at hand in the work for fair play that lies ahead. The railroads, the biggest thing in America next to agriculture and the industry that made our agriculture famous, claim our first attention. The insurance companies alone have $1,500,000,000 invested in railway securities, the savings banks $800,000,000. There are 30,000,000 policyholders and 10,000,000 savings bank depositors, besides 4,000,000 direct owners of railway securities thru investments. Here are 44,000,000 Americans directly or indirectly interested in $15,000,000,000 of railway capital, besides all those who, as producers, shippers and travelers, have a stake in the physical properties of these great highways.

By the time the railways have been permitted to earn a living wage, have been given a Federal charter, and are thus relieved from the mischievous and predatory lawmaking of forty-eight states, we shall be on the highway to fair play. By the time we have relieved an underpaid and overworked Interstate Commerce Commission by dividing the railroads into regional districts governed by boards similar in their functions to those provided in the new Bank Act, we shall be stepping briskly.

Another milestone will have been past when we abandon or modify the $50,000,000 railway valuation scheme which, before it is completed, will have cost the railways $35,000,000 at a time when urgent economies are imperatively necessary. This project is the pet panacea of Senator La Follette. When it was first planned it was to cost $3,000,000 and be completed in two years; then it was to cost $6,000,000 and be completed in three years; now it is to cost $50,000,000 and is to be completed in five years. Whatever it is to cost, and whenever it is to be completed, it will be obsolete before it is well begun, and no seer has yet arisen to say what the Government will do with it when it gets it.

We might profitably devote a little of the labor for fair play to pronouncing the last sad rites over the fatuous scheme to put the stock exchanges under the control of the Postmaster-General. This project is saturated with the delusion that in an all-wise and beneficent Government is to be found the cure for all the ills of society; but governments are never all-wise and seldom beneficent, nor is the Postmaster-General. When the average citizen who is now waking up asks himself whether politicians and their henchmen would have known when to close the Stock Exchange in the recent crisis, and when to reopen it, with all the specialized knowledge and tremendous responsibility that has been called for *ad interim*, he will not be slow to find the right answer. He will realize that nobody could have done

this work better than a trained group of private citizens conspicuous for their sense of responsibility to the public, and influenced in every detail of their labors by the fact that their own reputations, no less than the welfare of the public and the Stock Exchange, were at stake.

The big thing, the exhilarating thing, is the realization that the hour has struck for an end to profitable politics thru assaults on private property. In every part of the country men are coming to the front determined to secure a fair deal for honest business. Their hearts and consciences have been stirred. They have only to keep their heads, doing one thing at a time, reaching convictions only thru patient analysis, having the moral courage to withhold judgment until all the evidence is in, going slow in the matter of remedies, and abandoning forever the fundamental error of judging whole groups by individuals.

New York City

WHAT SHALL WE DO WITH THE RAILROADS?

BY SAMUEL REA

PRESIDENT OF THE PENNSYLVANIA RAILROAD

AN ADDRESS DELIVERED BEFORE THE CHAMBER OF COMMERCE OF NEW YORK, DECEMBER 3, 1914

IRRESPECTIVE of any decision in the rate case now pending, whether it be finally favorable (as we trust) or unfavorable, it is evident that the time is ripe for suggestions concerning constructive railroad legislation and policy.

Failure in the last decade to protect the railroads and railroad investors has at last produced a lack of confidence in public regulation, and we now know that, thru the weakness of the railroads, the whole country is suffering. Upon this great industry, thru the operation of too many hastily enacted Federal and State laws, and by failure to provide and adjust the machinery necessary to enforce those laws by reasonable and practical methods, a mistaken policy of repression has been imposed which has not permitted railroad charges to increase with the enforced increase in the cost of their operations. This has caused loss to existing railroads, and has precluded the building of new lines and the making of needed improvements and betterments on the present roads. The inherent weakness of the present situation is that we as a people seem to have assumed that the present railroads and their equipment and facilities are complete, and are sufficient for present and future needs, and that the chief function of public regulation is to curtail their revenues, increase their expenses and lessen the margin of return. In this growing country the present railroads are far from adequate, and therefore the policy of repression is bound to bring, if it has not brought already, a day of reckoning.

Let us not forget that if we expect people to continue supplying their savings for our railroads, present and future, their earnings must continue to be what these investors regard as reasonable and sufficient, and they are not likely to be governed by the opinions of legislators or commissions in this respect. The present policy of repression must be modified and lack of confidence must be removed, or these millions of investors will seek other avenues to utilize their capital.

The railroads are existing under conditions that breed business depressions, because of arbitrary, heavy and frequently unjustifiable burdens imposed upon them by legislatures, State and national, and there are still many wasteful legislative experiments forthcoming unless the authors discover that the public will not willingly pay their cost. Public opinion is now convinced, I feel, that the railroads are entitled to more equitable treatment under public regulation, and that opinion and your kind invitation have opened the way for me to offer some suggestions.

The present situation is not the result of premeditated action or of a clearly defined punitive public policy; it is the result of our failure to fairly adjust our national conception of the rights and duties of these common carriers, and to adapt our new laws for public regulation to rapidly changing commercial and financial conditions. It is not, therefore, a case for mere sterile criticism, but for mutual study and coöperation to the end that the evils now existing may be clearly recognized and corrected. The public, the railroads and the commissions, State and Federal, should unite in an effort to ascertain and finally establish the principles upon which wise regulation should hereafter proceed, so as to retain for the people at large the advantage of our American system of private ownership and operation under public regulation, and avoid being forced into another system far less desirable in a country such as this.

Under the existing Federal law, increases in railroad rates, no matter how reasonable or justifiable, may be suspended without any hearing, for at least four months after they would have become operative. In practise, this means five months after the rate schedules are filed with the Commission, and the suspension may be extended by the Commission for a further period of six months. It is, therefore, possible even if the new rates are justifiable, for the railroads to lose nearly a year of benefit from them while the Commission is determining their reasonableness. Is the public welfare promoted thereby? From practical experience and in a spirit of fairness and justice, I should say it is not, and the period of such suspension, and the determination of the question at issue, ought to be restricted to sixty days after the date of filing new rate schedules with the Commission.

Another trouble in the present situation is that the Interstate Commerce Commission has been overburdened with work and with responsibilities, many of which must be deputed to a large corps of subordinates, so that in many instances direct consideration by the entire Commission is impossible. The work of the Interstate Commerce Commission, as originally designed in 1887, was to prevent unjust discrimination in rates or service, to see that rates were reasonable, to secure publicity of railroad rates and practises, prescribe uniform railroad reports, and primarily act as referee between the public and the railroads. The Commission was given limited, but well defined, powers within reasonable scope. Now, however, as the result of new laws, the scope of its control of railroad operations and development has been largely extended. It could materially assist railroad development, but so far it has proven impossible for seven men in one center to act not merely as regulators but as administrators of the railroads, leaving the financial results and responsibility of that administration to be

borne by the companies and their owners.

There is also a certain amount of disagreement between the Federal and State laws and orders of Commissions, and of failure to recognize the inroads on railroad revenues of new laws, orders and of governmental awards.

In the practise of public regulation, from the constructive side, I would at this time suggest:

First—That the Interstate Commerce Commission should be materially increased, and so organized as to be able to deal promptly with the very important railroad questions affecting all parts of this large country, and thus conserve the time and energy of railroad officers, the public and the Commission. The additional members of the Commission should be selected from men having experience in railroad management, operation, traffic and finance, and if men of broad business experience were also added, it would be helpful.

Second—That the position should be placed beyond political influence, by a long tenure of office and with compensation sufficient to attract and retain men of the widest experience and greatest ability. We recognize the necessity for men of this character and technical experience in dealing with banking and other broad business enterprises, and we must recognize that equally wide experience is just as essential to deal intelligently and wisely with the railroad problems.

Third—That the regulatory power of the Interstate Commerce Commission should be clearly extended to the supervision and control of all rates and practises which directly, or remotely, affect interstate transportation or commerce.

Fourth—That the Interstate Commerce Commission should be given the power to interfere, by appropriate action, whenever necessary to maintain a rate structure approved by, or satisfactory to it, even tho, to accomplish this, it should be necessary for the Commission to prevent reductions of rates which would have a contrary effect, or to compel advances of rates found by the Commission to be unreasonably low. An unreasonably low rate may be beneficial to some one or more shippers, but the rates of some other shippers are sure to be disadvantageously affected thereby.

Fifth—That for the existing repressive policy of public legislation, a constructive policy should be substituted, and existing legislation should be so modified as to permit the railroad companies to do their full share in the development of the country's resources. It will naturally follow that the Commission should be enabled, and indeed required, in the determination of questions involving railroad rates and practises, to deal with the questions before it, not merely from the standpoint of the shipper and the carrier, but from the larger standpoint of the entire country, and on such economic and business lines that due and controlling weight may be given to these larger interests essential to the public welfare. Such a change in public policy and legislation is requisite to encourage the investment of private capital for railroad extensions and additional facilities.

For instance, I seriously question the practical utility of railroad valuation, for I believe that very few railroads are overcapitalized, and I know the public is not required to pay higher rates on weak roads than on the more conservatively capitalized railroad lines. Therefore, while the railroads are cordially and fully coöperating in the work of Federal valuation, yet, under present conditions and when economies are being enforced everywhere, I look to the Commission, under such an equitable public policy as I have in mind, not to commit the country and the railroads to so vast an expenditure until one system, or the lines in one section of the country, shall first be valued and the results demonstrated.

Sixth—That, as another necessary result of a constructive and equitable policy toward railroads, and with a Commission amply strengthened to deal with railroad questions, Congress would no doubt refer to the Commission for investigation and report such legislation as affected wages, employees' working hours and conditions, increased taxes, boiler inspections, extra and unnecessary men on trains, non-compensatory mail and parcel post service, railroad valuation, improved stations, grade crossing elimination, and other matters which seriously affect railway revenues and expenses. Due weight to these heavy expenditures would thus be given in approving rate schedules, and a tangible basis would be thereby provided on which to continue the regulation of these matters (if essential to the public welfare) without injustice to the railroads. The inability of the railroads to protect themselves in respect to increased wages fixt by governmental action could not be more forcibly presented than in the November, 1913, report of the Board of Arbitrators under the Newlands Act, relating to conductors' and trainmen's wages, on which the chamber's president served as chairman.

Seventh—That the extraordinary power to suspend rates without a hearing should be limited to a period not exceeding sixty days after being filed with the Commission, or some such reasonable period. If, after such hearing as could readily be had within this period, coupled with the information and data already possest by the Commission, from the current and special reports made by the railroads, under its uniform accounting regulations, the Commission could not be satisfied that the increase proposed ought not to be made, the rate should rightfully become effective, and the present confusion and delay would end. The railroads, as an act of self-preservation, will always endeavor to make their service and facilities satisfactory, and rates reasonable, because only in this way can they make friends, encourage business and earn profits.

In conclusion I say that considerable emphasis has been laid upon the fact that the railroad companies, and their owners, are deprived of an appeal to the courts for the protection of what they conceive to be their just rights as against the orders of the Commission. I am willing, however, to continue relying upon public regulation and public opinion to protect the railroads, altho I cannot overlook the fact that the Eastern railroads are earning a return of less than four per cent on their property investment. If this is not approaching confiscation, how much less must we earn before reaching that point? Surely the country does not want impoverished railroads unduly restricted in the conduct of their business. What it does want is strong, aggressive lines, built and improved with private capital, efficiently managed and operated, subject to equitable public regulation.

I believe in regulation by Commission, and I urge, therefore, that we do not encourage destruction of such regulation, but rather its conservation, by adapting it, as we have banking regulation and other laws, to suit the needs of the country, as they change from time to time. We must look beyond the present obstacles and view the whole subject from the statesman's standpoint. Under an enlightened policy of public regulation, but not repression, the railroads will be placed and kept in a strong position to meet increased traffic demands, as well as to live healthfully in times of depression. If we now by equitable dealing ensure their strength, one of the greatest obstacles to the recovery of financial confidence and business enterprise can be removed.

Philadelphia, Pennsylvania

© *Harris & Ewing*

MAJOR-GENERAL WILLIAM WALLACE WOTHERSPOON, U.S.A.

CHIEF OF STAFF OF THE UNITED STATES ARMY FROM APRIL TO NOVEMBER 16, 1914, WHEN HE RETIRED. ON JANUARY 1 HE WILL BECOME NEW YORK STATE SUPERINTENDENT OF PUBLIC WORKS ON GOVERNOR WHITMAN'S APPOINTMENT

THE PAN-AMERICAN OPPORTUNITY

BY HERBERT W. BOWEN

The Governing Board of the Pan-American Union, at the suggestion of the Argentine Republic, has just instituted a special commission whose members represent nine American republics, to study the war and formulate the common interests of the American neutral nations. This is a striking evidence of the mutual understanding which is developing between the Latin-American states and our own country, and lends especial timeliness to this outline of the great possibilities inherent in Pan-American coöperation. The author speaks with authority as a former Minister of the United States to Venezuela and author of a study of "International Law."—THE EDITOR.

OUR foreign policy is based on our determination to avoid entangling alliances and to maintain the Monroe doctrine. It was established neither by our Constitution nor by act of Congress, but by the common consent of our people. Our object in deciding to avoid entangling alliances was to isolate ourselves politically, just as we are isolated geographically, from Europe so as not to become embroiled in her quarrels and dissensions. That it is not an inherently selfish policy nor incapable of sufficient extension to permit us to take part in the world's best work is proved, notably, by the compact we made with Great Britain to have our naval forces coöperate with hers in abolishing the slave trade, by aiding with our military forces the other Great Powers to suppress the Boxer rebellion, by sending distinguished representatives of our Government and people to participate at The Hague and elsewhere in conferences convoked to mitigate the horrors of war and to promote peace and good will among mankind, and by our construction of the Panama Canal at our own expense for the use of all nations on terms of perfect equality.

Indeed, it would seem that the very restriction we have placed on ourselves to abstain from taking part in the conflicts of the European nations has made us more able and anxious than we otherwise should be to work with any of them, or all of them, or alone for the welfare of the world. It is a restriction that enlarges our freedom of action along peaceable lines, which are the kind we prefer to follow and to have our immense foreign population support us in following, and which we know are the most favored at heart by all peoples everywhere.

Some persons have urged that we should make an exception of the present great European war and join with the Allies that are attempting to crush German militarism. While we are opposed to German militarism we are by no means certain that, if crushed, it will not be succeeded by Russian or some other militarism that would be just as objectionable to us as the German kind. Militarism itself we undoubtedly would help to abolish from the face of the earth if we saw a favorable opportunity for doing so; but we have no reason to believe that in the present war that is the object of any of the combatants: moreover, there are many other questions involved in the conflict besides German militarism—such, for instance, as what disposition shall be made of Alsace and Lorraine, Schleswig-Holstein, Turkey, the Balkans, the old provinces of Poland, and what indemnities shall be paid to the victors in money and territory—and every one of them furnishes us with a good reason why we should congratulate ourselves on having a policy that constrains us to remain neutral in all contests that do not jeopardize the vital interests of our hemisphere as defined by the Monroe Doctrine.

That doctrine is the counterpart and complement of our policy to avoid entanglements with Europe, and means that we want Europe to avoid entanglements with us and our neighbors. In more precise terms it is a warning to the European nations not to attempt to deprive any of our sister American republics of any of their territory or to force them to change their form of government, and incidentally not to cede to one another their American possessions or to attempt to deprive one another of them by force. Our object in upholding the Monroe Doctrine has always been to secure for ourselves and all others on American territory peace and peace of mind, and it has been generally well understood and respected, especially as we have consistently refrained from interfering in European affairs, and have not attempted to prevent any European nation from obtaining due satisfaction for any wrong or injury done to it or to its nationals by any American Power.

Heretofore we have not been greatly concerned about our capability to defend the Monroe Doctrine in case any of the European Powers should attempt to violate it; but now that we see what modern militarism has ventured to do and is likely to repeat until permanent peace in the world is assured, we realize that we are not even sufficiently prepared to defend successfully our own territories and colonies from attack. There are naturally, therefore, among us some timid folk who advocate abandoning the Monroe Doctrine altogether, but they do not voice the sentiments of our people, who are just as determined to uphold it as Great Britain is to restore to Belgium her integrity and independence. We have the resources, the strength, and the power to uphold it, and undoubtedly the wisdom and the courage also.

But the burden should not rest on us alone. Each of our sister American republics should plan to take her part in trying to protect herself, just as Belgium is doing. They should arm and equip themselves for defense, and, moreover, should pledge themselves to support one another and us if ever the validity of the Monroe Doctrine is seriously questioned. Furthermore, as the unsettled condition of some of our republics tends to provoke strife between them and the European nations that have substantial interests in them, and to cause uneasiness thruout the Americas, a congress of representatives of the American republics should be convoked, and it should take such steps as are necessary to make changes of government by revolution impossible, and to arrange for the settlement by arbitration of all disputes among ourselves and with foreign nations that can not be adjusted by diplomacy, save only such as directly impugn the validity of the Monroe Doctrine. Thus supported and strengthened, the Monroe Doctrine would suggest to our sister American republics not our hegemony over them but our solidarity with them—and that is what we desire, and what will promote among us reciprocal feelings of trust, confidence and amity, and will tend to prevent any foreign nation from undertaking a war of aggression against any of us.

We should then be able to make with our sister American republics one general treaty covering all the provisions and stipulations that we have put, and are constantly putting, into our separate treaties with one another. The binding force of such a treaty as that would add greatly to the stability of constitutional government in the weaker republics, and the treaty itself, to all intents and purposes, would be a code governing our relations with one another. We should thus have formed an American League of Peace based on equal-

ity and justice, and it can hardly be doubted that it would not only command the respect of the other peoples of the world but would sooner or later suggest to them the desirability of having it developed into a World League of Peace, all nations agreeing not to enter into entangling alliances, not to seize the territory or impair the sovereignty of one another, to establish a code defining their rights and duties, and to protect it when called upon to do so by its executive council.

That we have a foreign policy capable of being thus developed should be a source of constant gratification to us. It is the only one of the kind the nations have ever known. It puts a boundary on quarrels and dissensions. It restrains the mighty and protects the weak. It voices the cry of the ages for permanent peace.

Woodstock, Connecticut

THE LITERARY WAR MAP

PROSE AND POETRY RECALLED BY THE FIGHTING ON EASTERN BATTLEFIELDS

BY EDWIN E. SLOSSON

IN The Independent of November 16th I mentioned some of the stories and verse which come into one's mind as he reads of the fighting on the historic battlegrounds of France and Belgium. But the other lands which have come under the shadow of the Great War have, some of them, a literary history that is still longer and richer than these. The outlandish names that appear in the dispatches from the Russian frontier are not so unfamiliar to us readers of romance as they are apt to be to our serious minded friends. They may know more dates and statistics than we, but we know the country, for we have lived there for centuries and past thru some lively times, thanks to Jokai Mor, Henryk Sienkiewicz and other magicians of the pen.

Would you know what kind of country is this East Prussia, this maze of marsh and fen, where half a million Germans and Russians have been for four months fighting? Then read what Sudermann says, for he was born there and yet could see it:

> Thick and heavy as if you could grasp them with your hands, the clouds spread over this flat land. Here and there the trunk of a willow stretched its rugged roots to the air, heavily laden with moisture. The tree was soaked with damp, and glistened with drops that had hung in rows on the bare boughs. The wheels sank deep into the boggy road that ran between withered reeds and sedge.

From such a setting how could one expect cheerful tales? A sadder novel was never written than *Dame Care*, yet East Prussia must be a far sadder place now than when Sudermann wrote of it. "It's a long journey from the Marne to the Vistula with your wounds a-smarting," so says the old soldier in Sudermann's *Katzensteg*, for which the English translator gives us a choice of titles, *Regina or the Sins of the Fathers*, as tho he could not tell which were the worse. I never could either. It is a story of the days when the world after having been long the plaything of the Corsican began to come to life again and the "Cat's bridge" is the secret way betrayed to the French that they might surprize the Prussians.

We can make the acquaintance with Danzig, Warsaw, Kovno and Königsberg a hundred years ago in company with *Barlasch of the Guards* thru the courtesy of H. Seton Merriman. For the less known region between Czernowitz and Lemberg thru which the Russians pursued the Austrians we have Karl Emil Franzos's *For the Right*, dealing with the Carpathians in 1835.

This picture of Warsaw when the French came back from Moscow that way is drawn by Walter Thornbury:

> All day the frozen bleeding men
> Came pouring thru the place;
> Drums broken, colors torn to shreds,
> Foul wounds on every face.
> Half stripped or wrapped in furs and gowns,
> The broken ranks went on;
> They ran if any one called out
> "The Cossacks of the Don!"

From Edwin Arnold we have some stirring lines quite apropos:

> But other blood than Polish blood hath dyed
> Green Vistula to red, and there hath come
> In these last days a dreader Nemesis,—
> One who hath spoiled the spoiler and for blood
> Asked blood—for shattered throne hath shattered thrones,
> So that the nations have forgot their fears,
> And cry exulting, "Yea, there is a God!"

To older readers *Thaddeus of Warsaw* was as well known as *The Scottish Chiefs*, but one would seek in vain for much local color in it, for Miss Jane Porter soon takes her hero away from where Kosciusko fell to the more familiar if less romantic environment of England.

For the real spirit of ancient Poland we must turn to the glowing pages of Henryk Sienkiewicz, who has "written in the course of a number of years and with no little toil" a series of books "for the strengthening of hearts" against that day which now seems coming. The aged author, tho now driven from his Galician home, must be rejoicing at the prospect of the restoration of his country.

In these romances Sienkiewicz has given us not merely guides to his country but guides to the hearts of his countrymen. Why Poland fell and why she is bound to rise again are both to be learned from his pages. More than any other author of historical novels, it seems to me, he writes as a contemporary. There are no anachronisms in his mood. The modern man cannot really enjoy fighting. He is a bit squeamish, even the worst of him, about inflicting wounds on his enemies. He is a bit doubtful, for all his protestations, about the right being altogether on his side. In the seventeenth century they were bothered by no such qualms of conscience. They knew the Lord was on their side. Witness this Polish sermon as reported by Sienkiewicz:

> See, now, the regiments are starting. Their spears are lowered to a line with the middle of the horse-ears; they have bent forward in the saddle, there is a cry of fear among the pagans, and delight up in heaven. The Most Holy Mother runs to the window crying with all her might: "Oh come, dear Son, and see how the Poles are attacking!" The Lord Jesus with his holy cross blesses them. "By God's wounds!" he cries, "there they are, my nobles, my warriors. Their pay is ready for them here!" And the archangel, holy Michael, strikes his palms on his thighs and shouts: "Into them, the dog-brothers! Strike!" That is how they rejoice up in heaven. And those down here cut and cut. Men, standards, horses roll over and over. They rush across the bellies of Janissaries, over captured cannon, and trampled crescents; they advance to glory, to reward, to an accomplished mission, to salvation, to immortality.

Perhaps it would not be hypercritical to say that the theological conceptions of the Polish patriot seem tinged with anthropomorphism.

In *The Deluge* Sienkiewicz has taken us all over the country covered by the war in the east from the Carpathians to the Baltic. Across the Niemen River where the Prussians tried to go but couldn't, lived the pretty Patsuneli girls. Kmita, banneret of Orsha, most shocking and

captivating of the heroes of romance, burnt and pillaged his way thru East Prussia (Prostki) with his Tartar band in much the same fashion as have the Russians recently. It was not far from where General von Hindenburg gained his great victory in August last that Kmita met and conquered his mortal enemy, Prince Boguslav. When we read that the Germans had taken Chenstohova (Czenstochowa) and violated its cloister we recalled that thrilling description of the defense of the cloister against the Swedes that opens the second volume of *The Deluge* when Kmita crept out into the darkness and blew up the big siege gun. And then follows the siege of Cracow when Zagloba, the Polish Falstaff, was attacked by the monkeys as he captured the Cracow gate. Those were the days when Frederick William, the Great Elector, gained the ir dependence of Prussia by disregard of his oath, a mere "scrap of paper." We learned to know—and to hate—the founders of the Prussian kingdom in Sienkiewicz's *Knights of the Cross.*

This war spreads so. While I have been jotting down these few references to the fiction and poetry of the two frontiers of Germany, the Ottoman empire has been drawn into the conflict, Africa is ablaze and the sunny islands of the Pacific have been darkened by the war-cloud. The guns of the "Goeben" bombarding the shores of the Golden Chersonese awoke the echoes of twenty-five centuries of legend and romance from *Iphigenia in Tauris* to *The Charge of the Light Brigade.* The Crimean War failed to accomplish its object, whatever that was, but it did produce some good literature, of which it is enough to mention Tolstoy's *Sevastopol,* the most powerful peace tract I know of. Tommy Atkins of that time had the same taste he has now. He sang of "the sweetest girl I know," tho to another tune than "Tipperary." The story belongs to Bayard Taylor since "his it is who says it best":

"Give us a song!" the soldiers cried,
The outer trenches guarding
When the heated guns of the camp allied
Grew weary of bombarding.

. . . . . .

They sang of love and not of fame,
Forgot was England's glory.
Each heart recalled a different name,
But all sang "Annie Laurie."

"An English ship sunk off Odessa," such is the news. But Edwin Arnold wrote her epitaph years ago:

Beneath Odessa's foreland
Washed by the Russian wave
Shattered and black an English ship
Rots in her sandy grave.

Simultaneously with the declaration of war against Turkey the British Government announced the annexation of Cyprus. This was not startling, since the island of Aphrodite was virtually ceded to England in 1878 by Turkey as the price of her protection against a Russian invasion. But it recalls the curious fact that Cyprus, the first loss of the Turks in the present war, was the last conquest of the Turks in Europe. In that conquest the Lord was on the side of the Turk, if we may take as gospel James Montgomery's sonnet on the siege of Famagusta, 1571:

Thus said the Lord: "In whom shall Cyprus trust
With all her crimes, her luxury and pride?

. . . . . .

Less by thy foes cast down than crushed by me!
Thou, Famagusta, fall and rise no more."

But we must not linger longer in Venus Isle, for Mars calls us back to "the Pontic sea whose icy current and compulsive force ne'er feels retiring ebb but keeps due on." Othello's imagery has been somewhat spoiled by the modern thalassographer who explains the phenomenon by an undercurrent of heavier because saltier water flowing northward from the Mediterranean. But we cannot stop to talk of the Hellespont and Bosporus, otherwise we should have as hard a time getting thru as Jason did when he went after the Golden Fleece. We must follow in his train for the "war extra" which dictates our course takes us directly to the home of Medea, the Transcaucasus. This region is now as it was then one of the richest in the world, tho it contains no such palaces as William Morris describes. Then its wealth was metal if we are right in assuming that the Golden Fleece was a primitive form of placer working, the cyanide process being yet on the knees of the gods. Now the seekers after wealth go deeper and find more. They have tapped the subterranean reservoirs that supplied the pitch for Noah's ark and the oil which fed the flame in the Temple of Everlasting Fire. This was lighted immediately after the flood, says the legend, and was to burn until the Day of Judgment. But the Zoroastrians failed to take into consideration the coming of the petroleum trust. Nowadays the Temple of the Fire Worshipers is the property of the Baku Oil Company, which does not believe in wasting fuel. But the engineer in charge will turn on the pale blue flame for the benefit of the tourist just as the Swiss turn on their waterfalls when the yodeler signals that the diligence is coming.

The Caucasian petroleum field was visited in 1474 by a Venetian traveler, Josofa Barbaro, and I quote his description as given in Hakluyt, with a special injunction to the printer not to simplify the spelling:

Vpon this syde of the (Caspian) sea there is an other citie called Bachu, whereof the sea of Bachu taketh name, neere vnto which citie there is a mountaigne that casteth foorthe blacke oyle, stynkeng horryblye, which they, nevertheless, vse for furnissheng of their lights, and for the annoynteng of their camells twies a yere. For if they were not anoynted they wolde become skabbie.

Marco Polo notes with apparent regret, perhaps because he had tried it, that the oil of Baku was not good to use with food as a substitute for olive oil. But neither of the Venetian travelers, or even the more imaginative Mandeville, anticipated that it would be put by us moderns to a new and worse use than the filling of lamps and the curing of camels, that this oil would supply the motive power to submarines and aeroplanes for attacking an enemy from below or above. Yet this it is which has made the Transcaucasia a greater prize than in the days of the Argonauts. The Turkish troops are pushing northward in the hope of seizing the pipe line that runs the oil from the wells of Baku to the port of Batum, the ancient Colchis.

But against a further invasion of Russia there stands the icy rampart which has always barred the way to armies that have tried to pass between the Euxine and the Caspian, the Caucasus, "of all mountains both the greatest in extent and the loftiest in hight," says Herodotus, whose chief fault as a geographer was his nearsightedness. To these peaks was Prometheus bound, and in its caverns Habib, the Knight of Arabia, studied the three hundred and sixty and six hieroglyphics of Solomon and learned the magic word of power that quelled the tempest and subdued the evil genii. We take it as a personal insult if it is insinuated that we have a single ancestor who did not bear the name of the natives of this region, yet we are not fond of revisiting the homestead of our proud race.

From the Caucasus the war is sweeping southward into a region that takes us further back than any other place; in fact, to the *ne plus ultra* of antiquity, since it is the Garden of Eden which the Cossacks are invading. At least such is the firm belief of those who live there, and if they don't know who does? One would think that enough blood had been shed here since the Fall of Man to wash out the original sin, but today's paper tells me that the Turks are here slaughtering the Armenians and the Russians slaughtering the Turks along the Araxes River, which flows near Erzerum and forms the

Russian boundary. "Wo is me that I sojourn in Mesech" seems likely to prove as eternally true as any other of the Psalmist's sayings.

The stream of the Russian invasion was split by Mount Ararat, and one branch turned eastward into Persia and the other westward into Turkey. What other armies have marched by the mountain's foot let us hear from James Bryce, who in his *Transcaucasia and Ararat* has given us the best account of this region as it was shortly before the Russo-Turkish war of 1877:

The evening was serenely clear. Ararat to the south, and the dark mysterious mountains towards Kars in the far west, riveted our eyes, and there was something inexpressibly solemn in the great desolate plain that lay around us under the dying light—a plain in which Armenian tradition places the site of the Garden of Eden. The curse of the flaming sword might well be thought to have clung to it, for few spots on earth have seen more ruin and slaughter than this Araxes valley. It has been the highway through which the Eastern conquerors and marauders, from the days of the Sassanid kings Shapur and Chosroes Nushirvan, down through those of the Saracen and Turkish and Mongol and Persian invaders, have poured their hosts upon the fertile shores of the Euxine. Here the Romans strove with the Parthians; here Alp Arslan overthrew the Armenian kingdom of the middle ages; here, down to our own days, Turks and Persians and Russians have carried on a scarcely interrupted strife. From Kars to Djulfa there is hardly a spot of ground that has not been soaked with blood, hardly a village that has not many times been laid in ruins. Yet when the storm is past, the patient peasant returns; he draws water again from the ancient canals whose network covers the plain, and remembers these scourges of mankind only in vague traditions, where the names of Nimrod and Semiramis are mingled with those of Tamerlane and Nadir Shah.

When Mr. Bryce came down from Ararat and said he had reached the top of the peak, the Armenian archbishop calmly replied that it was impossible, nobody had ever done it. Mr. Bryce does not tell us whether the strange timber he picked up on the mountain was gopher wood or not. The medieval travelers were not so reticent; they all saw the remains of the Noah's ark on Ararat, or if not, they heard of somebody who had. As Browning puts it in *Bishop Blougram's Apology:*

Such a traveler told his last news,
He saw the Ark stop at Ararat;
But did not climb there since 'twas growing late,
And robber bands infest the mountain's foot.

Trebezond or Trapezus, which the Russian warships bombarded the other day without doing any harm except the demolition of the Russian consulate, has had an eventful history, for it was once an "empire." But we know it chiefly as being the place that ten thousand Greeks, or what was left of them, were particularly glad to reach when Xenophon led them from the Tigris to the sea.

About the other frontier on which the Turks are fighting, it is sufficient to say that a very interesting account of the most remarkable events occurring in this region is contained in a book by an anonymous author, published so many years ago that it is forgotten by most newspaper readers. The name of it is *Exodus* and it has a direct bearing on the present campaign, for it tells of the march of an army of 603,500 men thru the same region which the Turks are now trying to traverse in the opposite direction. It remains to be seen if the Ottoman army will be able to cross the desert of Sinai in less than forty years, and if they do, whether the Suez Canal will be made dry by a strong east wind blowing all night.

If now in our effort to follow the war we plunge into the Pacific, we are in a sea of romance, where poets, novelists and artists have labored for three centuries to depict

The happy shores without a law,
Where all partake the earth without dispute
And bread itself is gathered as a fruit:
Where none contest the fields, the woods, the streams;
The goldless age, where gold disturbs no dreams. —*Byron.*

Here, as in Belgium and France, we find Stevenson our best guide and companion of the voyage. Like any other suburbanite, he had to send directions to his friends how they could get to Vailima; "after leaving San Francisco take the second turn to the left." He certainly must rest easier in his tomb on Mount Vaea now that the Germans he hated are expelled from Samoa and the British flag waves over Apia. The island of Upolu was surrendered by the German governor without resistance when the New Zealand expedition appeared in the harbor.

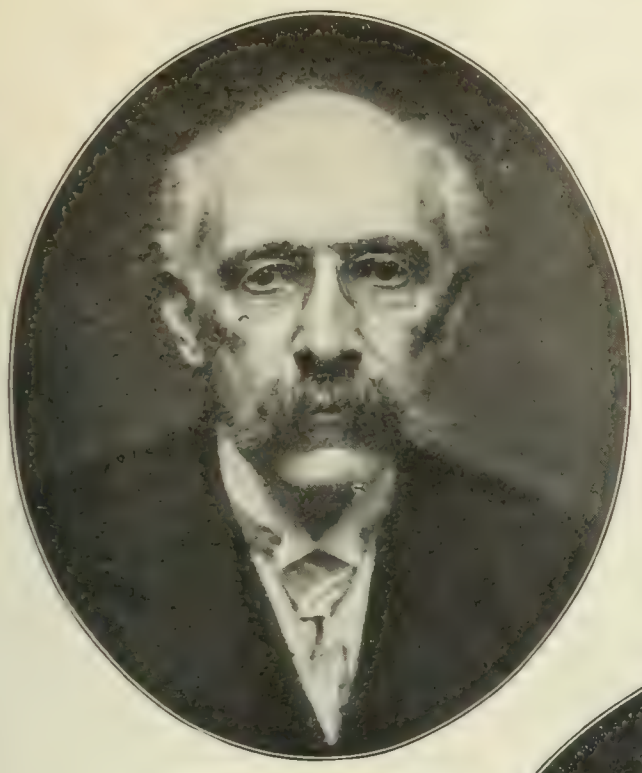
Stevenson visited many of the other islands that have figured in the present war, even calling, in such semblance of full dress as the "Janet" afforded, on the German commissioner of Jaluit, where now a Japanese official reigns instead.

If on leaving San Francisco we take the first turn to the left instead of the second, we come to Tahiti, where Jack London's "Nature Man" comes on board to preach socialism and the simple life. A carriage at the dock of Papeete insists on taking us to Pierre Loti's pool or to the Venus Point of Captain Cook. The scenery and the savage life of Tahiti have inspired some of the finest pages of Melville's *Omoo,* Stoddard's *South Sea Idyls,* and La Farge's *Reminiscences.* The French have been looking forward to a great boom for Tahiti now that the Panama Canal is done, for it lies on the direct route to Australia, and they seem likely to realize their hopes, for the war has not affected the island except when the German cruisers paid an early morning call at Papeete and shelled the Café de Paris and the Chinese curio shops along the shore.

Of New Guinea, which has been divided between the Dutch, the Germans and the Australians, we have some glimpses in the recent stories of Beatrice Grimshaw. Whether they are true to life I do not know, but at any rate they are sufficiently horrifying to satisfy the imagination.

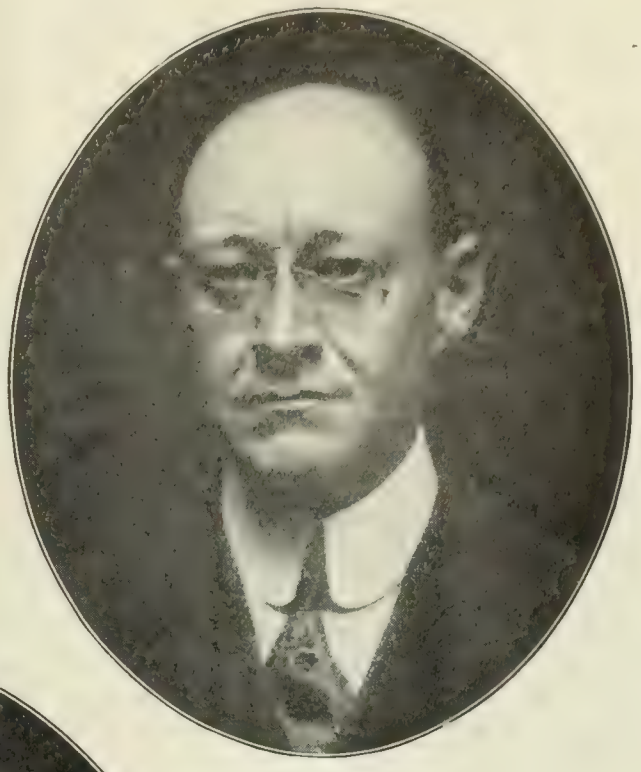
Shantung Peninsula, which has been lost to the Germans thru the capture of Kiao-chau by the Japanese and British, is classic ground, since here was born and buried Kung the Master, called by us Confucius, who for twenty-four centuries has molded the minds of his race. But it would be an impertinence for me to refer in detail to the legendary and historical literature of Shantung, since every reader is as familiar with it as I am myself. And with the loss of this storehouse of tradition peace comes again in the Far East and the Pacific

THE CHURCH OF BETHLEHEM



BY CLINTON SCOLLARD

Within the Church of Bethlehem
Is set a little silver star;
Here Christ was born—the legend saith–
Here Christ was born! The gates of Death
Were shattered like a brittle bar
Upon that morn—that morn afar.



I mind me of the silver star
Within the Church of Bethlehem;
Across the years, the bitter years,
Of wo and sacrifice and tears,
We seem to touch His garment's hem,
More dear than kingly diadem!

Oh, sacred Church of Bethlehem!
Oh, more than sacred silver star!
We turn to you, we kneel to you,
We send our rapt appeal to you,
Across the leagues that stretch afar;
Most precious spot on earth you are!

SALVETTE AND BERNADOU

THE STORY OF A WAR-TIME CHRISTMAS

BY ALPHONSE DAUDET

At any Christmas this little story of Daudet's—Daudet, whose delicate Provençal imagination played so charmingly over the life of his countrymen—would repay the reader with the note of simplicity and sincerity it contributes to our Christmas thinking — often enough sophisticated and artificial. But in this year, when Frenchmen are again lying wounded in German hospitals, and when there are thousands of blesses *who will never return to the Noel feasting, its appeal is multiplied many times. The translation was made for The Independent by Geddes Smith.*—THE EDITOR.

IT is the eve of Noël in a big Bavarian town. Thru streets white with snow, thru the bewildering fog and the noise of the wagons and bells, the crowd pushes its way joyously to the open-air cookshops, the booths and shop windows. Brushing with a light rustle the beribboned and beflowered store-fronts, branches of green holly and fir trees laden with trinkets, carried in the arms of passersby, tower above one's head like the foliage of the Thuringian forests—a memory of nature in winter's artificiality. Night falls. Down there behind the gardens of the Mansion there is still a gleam from the setting sun, red thru the fog, and thruout the town there is such gaiety, such universal preparation for the fête, that every light shining at the windows seems to hang from a Christmas tree.

For this is no ordinary Christmas. We are in the year of grace 1870, and the birth of Christ is only an additional pretext for drinking to the illustrious von der Thann and for celebrating the triumph of the Bavarian warriors. Noël! Noël! Even the Jews of the back streets are jovial. Here comes old Augustus Cahn, turning the corner of the *Blue Grapes* on the run. Never have his ferret eyes glistened as they do tonight. Never has his little bristly head wagged so cheerfully. Over his sleeve, worn by the cords of his satchel, hangs a decent little basket, full to the brim, covered with a brown napkin, from under which the neck of a bottle and a sprig of holly peep out.

What the devil does the old usurer mean to do with all that? Does he too wish to keep Noël? Can he have gathered his friends and his family together to drink to the German Fatherland? . . . But no! Every one knows well that old Cahn has no native country. His Fatherland—his strongbox is that. He has no family any longer; no friends; nothing but creditors. His sons—say rather his partners—set out three months ago with the army. They traffic down there in the rear of the Landwehr's wagons, selling brandy, buying timepieces, and, in the evening, when the battle is over, going out to empty the pockets of the dead, to rip open the knapsacks that have fallen in the ditch by the roadside. Too old to follow his children, Cahn remained in Bavaria, and he does a magnificent business there with the French prisoners. Always prowling around the barracks, it is he who buys up the watches, the epaulets, the medals, the money orders. One sees him slipping into the hospitals, into the ambulances. He goes up to the beds of the wounded men and asks them in an undertone, in his hideous jargon: "Haf you anyding to zell?"

So! If you see him at this very moment trotting along so quickly with his basket on his arm, it is because the military hospital closes at five o'clock, and he has two Frenchmen waiting up there in that great black building with barred and narrow windows, where the only illuminations Noël can claim are the pale lights which guard the pillows of the dying . . .

II

These two Frenchmen are named Salvette and Bernadou. They are two *chasseurs à pied,* Provençals from the same village, enrolled in the same battalion, and wounded by the same shell. But Salvette is the hardier, and already he begins to get up, to take a few steps from his bed toward the window. Bernadou—he hasn't the will to get well. Behind the pale curtains of his hospital bed he seems thinner, more languid, from day to day; and when he speaks of his own country, and his return, it is with that sad smile of the sick, in which there is much more resignation than hope. Yet today he is a little more animated, thinking of that beautiful Noël festival which, in our Provence country, is like a great blaze of joy kindled in the midst of winter, remembering the home-coming from mass at midnight, the church, bedecked and illuminated, the streets of the village—quite dark, full of people. Then the long night around the table, the traditional three flambeaux, the *aioli* (a Provençal dish), the snails, the pretty ceremony of the *cacho fio* (Yule log), which the grandfather parades around the house and sprinkles with sweet wine.

"Ah! poor Salvette, what a sad Noël we are going to keep this year. . . . If we only had enough to pay for a bit of white bread and a little bottle of pale wine! . . . I should have liked that, before they sound taps for me—to sprinkle the *cacho fio* with you once more. . . ."

And as he spoke of white bread and pale wine, the sick man's eyes shone. But what's the use? They have nothing, these poor fellows—no money, no watch. Salvette still keeps carefully in the lining of his jacket a money order for forty francs. But that is for the day when they are free, for the first stop they make at an inn on French soil. That money is sacred. Impossible to touch that . . . And yet, poor Bernadou is so sick! Who knows if he will ever be able to set out for home? And what a fine Noël they could still keep together—isn't it better to take advantage of it?

Then, without saying anything to his countryman, Salvette had unfastened his coat to take out the money order, and when old Cahn came—as he did every morning to make his round of the wards—after a long debate and discussion in a low voice, he slipt into the Jew's hand the square of paper, stiff and yellowed, smelling of powder and stained with blood. From that moment Salvette has had an air of mystery. He rubs his hands and smiles all by himself as he looks at Bernadou. And now that the night is falling he is watching, his face prest to the window, till he sees thru the fog in the deserted square old Augustus Cahn, all out of breath, arriving with a little basket on his arm.

III

The solemn hour, which strikes from all the steeples in the town, breaks mournfully into the restless night of the wounded. The ward is silent, lighted only by the night lamps hung from the ceiling. Great wandering shadows flutter over the beds, over the bare walls, with a ceaseless vibration which might be the opprest breathing of all the men stretched out there. For the moment, it is only the dreams which speak aloud, the nightmares that groan; while from the street rises a vague murmur—footsteps, voices, reëchoing thru the sonorous chill night as under the porch of a cathedral. One feels the pious flurry, the mystery of the religious festival stealing thru the hour of sleep and lighting in the dead village the smothered gleam of the lanterns and the glow in the windows of the church.

"Are you asleep, Bernadou?"

Very gently Salvette has placed on the little table beside his friend's bed a bottle of Lunel wine, a round loaf of bread—a beautiful Noël loaf with a sprig of holly planted firmly in it. The wounded man opens his eyes, dark-ringed by fever. By the doubtful light of the night lamps and the white reflection from the great roofs where the moon makes the snow glisten, this improvised Noël seems to be a fantasy.

"Come, wake up, *pays!* . . . Nobody can say that two Provençals let the eve of Noël pass by without sprinkling a dash of *clairette* on it" . . . and Salvette raises him with a mother's gentleness. He fills the goblets, cuts the bread—and then there is drinking, and talk of Provence.

Little by little Bernadou is roused—grows excited. The white wine, the memories . . . with that childishness which the sick disclose in the depths of their weakness, he asks Salvette to sing him a Provençal carol. His comrade asks nothing better. "Let's see, what do you want? *The Innkeeper?* Or *The Three Kings?* Or *St. Joseph Said to Me?*

"No! I like *The Shepherds* better. That's the one we always sing at home."

"*The Shepherds* then!" Under his breath, his head in the curtains, Salvette begins to hum it. Suddenly, at the last couplet, when the herdsmen, coming to see Jesus in the stable, have placed in the manger their gifts of new laid eggs and cheeses, and when, dismissing them courteously,

> Joseph spake then: "Friends, I pray,
> Turn you back and take your way.
> Shepherds,
> Go you on your way!"

poor Bernadou falls back heavily on the pillow. His companion, thinking he has fallen asleep, calls him, shakes him. But the wounded man lies still, and the sprig of holly on the unstirred sheet looks already like the green bit of palm that is put at the pillow of the dead.

Salvette understands. Then, full of tears, a little giddy from the feast and from so great a sorrow, he catches up again at the top of his voice, in the silence of the sleeping room, the joyous refrain of Provence:

> Shepherds,
> Go you on your way!

KINDLING THE CHRISTMAS FIRE

BY ORVILLE A. PETTY

WHEN the year is old and the nights are bold
And the hearth is gray with the ash of care;
When the world is rolled in a powdered cold
And ice and fear are everywhere;
Collect the moonbeams soft and shy,
Catch a spark from the midnight sky,
And faith from the days that cannot die;
Gather the glow of the shining snow
And glint of glittering spears that grow,
And light of eyes that love and know
The end of a story yet untold;
And mingle with this blaze of gold
The hope repentant sunbeams hold;
And fragrant myths from foreign shore;
And fan with songs of mystic lore;
Heap customs quaint from days of yore
Against the clog of moral dross,
And to its flaming laughter toss
The broken ends of gain and loss,—
And, then, when they sing like a throbbing string,
As sweet as the strain of a sacred lyre;
When a light they fling where the shadows cling,
You have kindled again the Christmas fire!

DUTIES BETWEEN MAN AND MAN

WHAT I BELIEVE AND WHY—SIXTEENTH PAPER

BY WILLIAM HAYES WARD

I HAVE already recorded my conviction that the sense of right and wrong is inherent in our nature, and is not anything to be argued and proved. The rule of right, as I have said, is good will, benevolence, love; as the absence of these, or the presence of their opposites, ill-will, malevolence, selfishness, is of the essence of wrong. It has also been mentioned that duties arise as soon as relations arise between intelligent beings. The previous chapter has considered the reciprocal duties of God and man; the present chapter is concerned with the duties of men to each other. To be sure, some duties to our fellow men may depend on our duty to God, or may be evidenced by such duty to God, in which case they will belong both to religion and to morals. Such would be a duty to bring men to the knowledge of God; but independently of and apart from God, duty to our human brothers arises of itself and would exist if there were no God.

This sense of duty we call Conscience. I would define it, in its more general meaning, as including both the sense of obligation to show good-will to others, whether God or man, and, next, the more or less intelligent impulse to obey that sense of obligation. Properly it is only the former element which is conscience, while the latter is guided by reason, and may be mistaken. The sense of obligation may be very strong, and is always imperative, while reason may be wofully mistaken as to what God requires or what would be of benefit to mankind. Men have believed that God required the sacrifice to him of every first-born child, and the father and mother properly obeyed their conscience in the hideous rite. A multitude of such infants have lately been found in the excavation of Amorite cities of Palestine.

CHANGING MORALS

Thus what is right in one generation becomes wrong in another, owing to better views, under new conditions, of what is of benefit to humanity. Even from our fathers' days we have learned this. Fifty years ago multitudes in our own country believed slavery to be right, an ordinance of God, and our Constitution endorsed it; now the whole world condemns it; and, coming down to our own times, we have only to read our political platforms to learn that financial and commercial procedures which nobody condemned and the best of men engaged in are now regarded as wrong and are made illegal. We are now in the very welter of discussion as to moral questions, by which I do not mean the obligation to do right, to do what is for the public weal, but the question what *is* for the public welfare, which when found we will obey. With the changing conditions of society I expect great changes in our ideas of what is right, and those changes may be very radical. All this subject of duty to our neighbor comes under the head of morals, by which I mean the exercize of duties toward our fellow men; while *ethics* has a wider meaning, and covers the whole realm of duty, theoretic or practical, to mankind or to any other beings whatever.

Under an analysis of our definition of morals, as the exercize of the duty of good-will to our fellow men, we may embrace the individual duties which we should exercize; and we may consider them as duties to one's self, duties to individuals generally, duties to our families, duties to the social or business association of which we are a part, duties to our town, state or nation, and duties to the world as a whole.

THE DUTY TO SELF

(a) And first our duties to ourselves. These depend chiefly on their bearing upon our ability to perform in the best way our duties to others. All is embraced in the duty to make the very best of our powers so that we can use them to the greatest advantage for the benefit of others. It means the preservation of a clean, pure and healthy body, such as will disgust no one, and infect no one; and this means the planning for a long life of usefulness. It means the abstention from alcoholics and narcotics, and with this I would include tobacco as well as alcohol and opium. It means abundance of food, abundance of exercize and abundance of sleep; it does not mean time wasted in any of these good things. There must be recreation and pleasant discourse, but these are subsidiary to larger purposes.

It means still more the very best attainable culture of our minds by education, and of our wills by the exercize of our powers, so that we may learn to do in the best way possible to us the duties incumbent upon us. Those duties differ, as our natural powers differ. There is great difference between us in mind as well as body, and some are fitted to lead well, and others to follow well. Particularly in youth is it our duty to use all our effort to equip ourselves for future service. An infant can do nothing but eat and sleep and grow; the main duties of the child—not by any means all—are to grow in mental power and in moral purpose by study and by useful labor, getting ready to fill as high a field of service as possible. That field may be as leader of men, or it may be in filling quite as conscientiously some of those ordinary and limited fields of service which in the nature of things must come to most of us. With what we can reach we must be satisfied, and fortunately are satisfied. I know I am not competent to be President of the United States, or president of a bank or of a board of trade, and I don't envy such fortunate people or envy their position or wealth. I believe that for one's own character, to make the best of one's self, every one — artizan, toiler, professional man, master, mistress or servant, should give his service not stintedly, but generously and liberally and with a happy mind.

I believe that to cultivate one's body or mind or soul just for one's own pleasure or improvement is unworthy and selfish. One can be an intellectual as well as a physical inebriate, all intoxicated with his own selfish satisfaction, and, because useless to others, stunted in his own soul, drunk with conceit of himself, incapable of measuring larger values. One's duty to one's self forbids him to live such a life.

(b) Our duties to other human beings generally may be briefly stated. They are embraced in what has been called the love of benevolence as distinguished from the love of complaisance, that is, of general good-will as distinguished from special affection. It means that as we have opportunity we will do such service as we can, even if it be but giving a smile, while it may be as much as the Samaritan did for the man who fell among thieves.

THE FAMILY

(c) The family is the most important, the most intimate unit of which society is composed, and no duties are more important than those related to the family. On the family rests the continuation of the human race upon the earth; and as humanity is more of value than all the rest of the universe we know put together, its succession of births to replace deaths is of the first importance, not second even to that of preserving

individual life. It is desirable, then, that all should marry and it is desirable and necessary that, in order to maintain the present population, even without increase, every married pair should have three children, two to replace themselves and one more to allow for the chance that one-third will die before reaching the age of marriage. Of course, many of marriageable age will unfortunately never marry, and more than three children will be necessary for each couple in order to fill up their lack of duty. I believe it is desirable that marriage should not be long delayed after the parties reach marriageable age, and that it is a great misfortune that present social conditions tend to delay marriage to an age when the parties are more averse to having children and have learned how prudently to limit their number. Particularly do I believe it is the duty of the more ambitious and better educated to desire large families. The abler in brain and body a man and wife, the more imperative their duty to leave many to inherit their ability. This duty is higher than any duty to themselves.

I believe that the laws of marriage belong to the State and not to the Church, except as all things are to be judged by the Church. We have reached the blessed condition of peace in which the number of the sexes is measurably equalized and monogamy prevails. But in a barbarous period, when the men were killed off in war, it was best for the State that polygamy should provide homes for the superfluous women, that their children might replace the loss by war. Monogamy is best for us now, but that implies that somehow early marriage for all of reasonable health should be provided, and possibly assured. It is the advantage of society that should fix legislation as to marriage, and also for divorce. While the rights of parents and children should be rigidly protected, I can see no reason why divorce should not be allowed in cases in which, by the fault of either party, marriage proves a curse rather than a blessing. Unfaithfulness to the marriage bond is an injustice to the innocent party and a proper cause for divorce, and other acts of injustice, such as cruelty or desertion, are just as truly such. I also believe that the maintenance of freely accessible houses of prostitution in our cities is a fearful evil, that it is a shocking impediment to marriage, a distributor of disease, and that its existence anywhere is a burning disgrace to the community.

The virtues that attend marriage are familiar to us—affection, chastity, parental care and thrift. In marriages, husband and wife overcome selfishness by loving each other and their children more than they love themselves. It is a narrow circle, but within that circle it cultivates the sweetest virtues, and educates each for the wider expressions of good-will.

(d) But it is a stingy soul that confines its affections within the limits of a single family. We ought to be interested in our neighbors. Our business and our residence embrace others than the members of our own households. We are in churches, clubs, societies, unions, established for the very purpose of helping one another. Every such fellowship enlarges or should enlarge the heart. It need not dissipate the love of family, but it tends to make family love less selfish, and teaches us to consider the duty of serving others. Particularly those labor organizations which are formed for the purpose of mutual support and the defense of the interests of the members, teach loyalty and self-sacrifice, and are of moral benefit to the members when kept within legitimate limits. But what is generous toward fellow members may become ungenerous and cruel in its belligerent treatment of those not members. We have seen such unions, whose purpose is beautiful because helpful, perverted to help each other by outrage and murder. But that is the old story which the war spirit has taught our people, that they can benefit themselves by slaughtering by the thousand those of other nations.

(e) That is a yet wider loyalty which we properly cultivate as members of a town, city, state or nation, and we call it civic pride or patriotism. It is a true adage that it is sweet and beautiful to die for one's country. A noble virtue is patriotism. It is a true adage that it is expansion of good-will toward the entire body of citizens of which the patriot is one; and it is displayed in all its glory in the event of war, which risks the sacrifice of life itself. And yet its perversion is the occasion of more wrongs than almost anything else. It teaches us, too often, in the love of our own people to hate those of another race or nation, Chinese, Italians, Irishmen, Jews, Negroes; and in war it allows of every atrocity. It is this narrow, pestiferous perversion of the patriotic spirit which shows itself in race pride and race prejudice, which makes for our nation all its troubles in the South, in Porto Rico and the Philippines; with China and Japan, and which gives England her troubles in India and South Africa, and which in war makes nations hate and murder each other. But at times the beautiful spirit of patriotism is met and conquered, when it descends to narrowness, by the equally beautiful and equally narrow spirit of class loyalty, as when in France and Germany, forgetting their old national hostilities, the Socialists meet and declare that they will allow no war between the nations, for the love of humanity is greater than the love of nation. Yet in the terrible European war we have seen this more generous class loyalty swept aside by a torrent of perverse patriotism.

(f) So I come back where I begun, to the good-will toward all men individually and generally, as the true inclusive virtue and duty. Unperverted, the love of family, of class, of town or nation is beautiful, but true virtue is not limited. Limit is vice. The enlarged soul will have interests in all the nations of the earth, will rejoice to learn of their progress and welfare, will seek in some way to bring them into a better knowledge of God, to a truer education, to a fuller liberty, and will not confine one's interest to his own family, section or nation. Yet ever with this proviso must we judge of duty, that it must be measured by opportunity. It is only the privilege of education and culture that allows a man to embrace the whole world intelligently in the arms of his love. One who is ignorant of all beyond the meager circuit of his vision can love only what he sees. Then let him love his ball club or his shopmates up to his little limit. That is his virtue, his duty; and let his children g to school, study geography, read the foreign news in the daily paper, and be better than their fathers, not because they love better, but because they love more.

THE NATIVITY

BY DAN C. RULE, JR.

Balthazar said
"I see afar
The splendor of
His wondrous star."

Then Gaspar sighed
"The end is loss;
Beyond his star
I see a cross."

But Melchior cried
"God's grace comes down:
Beyond his cross
I see a crown!"

IMPORTANT TO TEACHERS

It is letters like this below that show how teachers regard The Independent. We have more than one hundred similar letters in our files, and they show us that The Independent makes good with good teachers.

Altho it is the business of the instructor to keep in touch with a half dozen standard weeklies, the motives which led to a selection of The Independent for our work are these: This magazine presents a positive and sane discussion of vital matters, yet one from which we can occasionally fairly dissent. It presents definite information, and trustworthy, unencumbered by discussion. Its articles are brief enough to fall within the compass of high school pupils. It is devoid of nonsense and casuistry. It contains a great deal of current history in concise form. It is comprehensive and cosmopolitan in its contents. Now this looks very much as if I were writing an advertisement for the magazine, but I mean it simply as a statement of facts which formed our judgment. I esteem certain other magazines very highly, but I regard The Independent as peculiarly adapted to our needs.

Send for booklet "How To Use The Independent In The Teaching Of Civics."

SOME OBSERVATIONS ON MUNICIPAL GOVERNMENT

BY DELOS F. WILCOX

It has not been quite twenty years since Albert Shaw in his two books *Municipal Government in Great Britain* and *Municipal Government in Continental Europe*, introduced city government to the American people as a proper subject for thought and laid the foundations for an extensive civic literature. True, before that time city charters were drafted and redrafted, municipal corruption was exposed from time to time, and fierce campaigns were fought in this city and in that over local issues. But every city walked in its own darkness. There was no municipal government literature in America and no organized effort to solve the problems of the city.

The municipal home rule movement started nearly forty years ago in Missouri and, altho it has made considerable headway, its progress has been far less rapid than seems to be characteristic of these kaleidoscopic days. The home rule movement has carried a protest against the prostitution of city business for the gratification of the passions of state and national politicians for power and plunder. In this aspect home rule has not been so much opposed to administrative centralization as to the spoils system and political impertinence.

In another aspect home rule has represented the demand of great cities for the right to "do as they please" and be "wicked" if they want to. It is this factor in the problem that has done more than anything else to hinder the orderly progress of the home rule movement.

The philosophy of municipal home rule goes deeper than a mere protest against the abuse of power or the tyranny of the majority. Home rule is a means to cultivate self-reliance. Everything goes back to the individual, the family, the local community. The hardier they are, the more they work and think, the more energy they have the better it is for the nation and for the world at large. Everything that *can* be done as well or that *will* be done better by the individual, by the family or by the city should be left to them.

Municipal home rule does not in itself insure a further development of democracy. It must be supplemented by majority rule at home.

The commission form of government usually contains provisions intended to perfect the organization of the city as a political democracy, and make the public officials the agents and servants of the people. Without such provisions, the commission form would be a political anomaly. *Whose* business is it that the commisioners attend to?

The short ballot movement is an effort to enable democracy to "democ,"

Dr. Esenwein

as Mr. Childs would say, by giving the people simple tasks to correspond with their supposed ability to function. That is good as a palliative, and in so far as the short ballot confines itself to a limitation of the number of offices to be filled by popular vote, it is based on sound philosophy. But when it tries to limit the number or the contents of the measures upon which the people vote, the short ballot is in danger of falling a victim to its own name.

What the states, and especially the cities, need is *complex* voters. Democracy cannot function by a rule of thumb. It is intelligent, opinionated citizens, working overtime at real politics, that create democracy.

RAILROAD DIFFICULTIES IN 1914

(*See page 462*)

February 3—Kansas City, Mexico & Orient ordered sold at foreclosure.

February 11—Southern Pacific R. R. Attorney General files suit to compel company to dispose of control of Central Pacific R. R.

March 3—New Haven shares at new low record.

March 6—St. Paul charged with doctoring its accounts by Interstate Commerce Commission.

March 6—Chairman Chicago, Rock Island & Pacific R. R. states company needs $49,000,000 to get over its difficulties.

March 6—Rock Island preferred at new low record.

March 18—Colorado & Southern passes dividends on first and second preferred.

March 26—Pennsylvania lays off 25,000 men and puts 40,000 on part time.

March 27—Norfolk Southern passes dividend.

March 28—New York Central lays off 25,000 men.

March 30—St. Louis Southwestern reduces preferred dividend from 4 per cent to 2 per cent.

April 21—New Haven stockholders vote dissolution demanded by Government.

April 22—Kansas & Texas preferred dividend past.

April 30—Missouri Pacific sells at low record of 15¼.

June 19—Tentative plan for reorganization of Rock Island properties announced.

June 25—Wells, Fargo & Co. reduces dividend from 10 to 6 per cent.

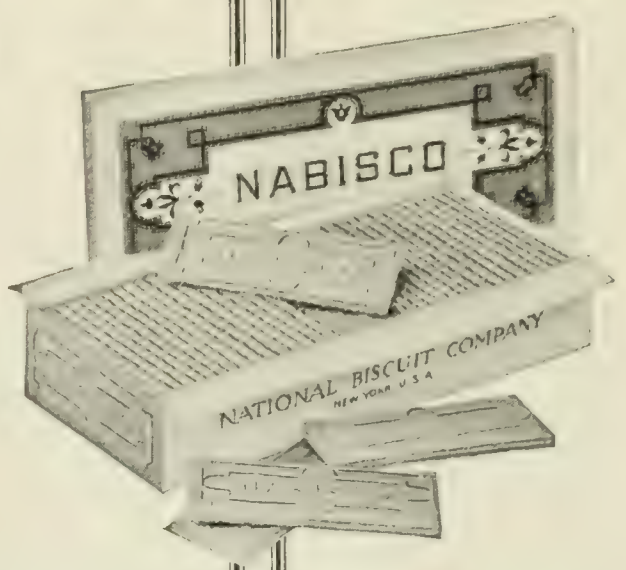
June 25—New York, Ontario & Western passes dividend.

June 30—United States Express Company dissolves after sixty years' service.

July 1—Cincinnati, Hamilton & Dayton defaults interest.

July 16—New Haven 49¾, a new low record.

August 11—Receiver appointed for International & Great Northern.



August 20—Chesapeake & Ohio defers action on dividend.

October 13—Southern Railroad announces preferred dividend in script, and cuts salaries of officers.

October 23—Toledo, St. Louis & Western goes into receivership.

"KEYSTONES OF THOUGHT"

"Life is too short for reading inferior books."—Bryce.
"The most difficult of all tasks is to think."—Emerson.

Do you fail in clearness of thought and of expression, especially in conversation?
Do you teach or preach—or lecture? Do you write or dictate?
Do you want to give straight-to-the-point advice to your children, your friends, your employees and YOURSELF?
Do you, as Host, Hostess or Guest, want a spur to cleverness of thought, wit and repartee?
Do you want a companion for the home, the office, the rectory a travel chum too—that will respond to your every mood—serious, humorous, wise, witty?
Have you an active or passive grouch against religion—against the clergy (a now fashionable disease usually confined to the middle aisle) because of "what they say and do and because of the way they live?"

FINE WISCONSIN FARMS for sale of all sizes and prices. They are among the finest in the State of Wisconsin, the soil is very productive, and the crops are always sure, as the rainfall is always ample; they consist of corn, wheat, rye, barley, clover, timothy, alfalfa, fruit and vegetables. They are located near churches, schools and good markets; prices are very reasonable and terms are part cash and balance in five years at 6 per cent. interest. Come at once and make your selection. We have just the farm you are looking for. Hart Lumber and Cedar Company, Oconto, Wis.

3000 Treasure Islands!

You planned it out so carefully. Directly you grew up you were going to live like Robinson Crusoe on an island, only the person you cared most for, would be there also. In the Tropics one could swim and fish and sail, and live in the open all day. And the beautifully lonely nights, with only a scattering of friendly stars, and the prodigal young moon spilling honey on the sea, for company!

But while the years totalled up astonishingly, they never seemed quite able to overtake your dream. Other men broke away from the grind long enough to keep insultingly well, but somehow you never had the time.

Luckily when the breakdown came, your doctor, who could heal dreams as well as people, packed you off to NASSAU-BAHAMAS. There the temperature averaged 72 Fahr. and the air had the salt tang of the sea and the wild sweet fragrance of exotic flowers.

At first it was just loafing in the sun, then gradually lengthened surf baths, then interesting drives, then golf, then—why, then *you were another man.* Dark as a walnut, perfectly fit—you had found your Treasure Islands!

Not a "Cure" but a "Climate"

Yeaton, Rogers Park, Chicago, Ill., $4.10; Mary C. Taggart, Pittsburgh, Pa., $2.

Passenger—I'd give you a tip, only I've nothing but a $10 bill.

Porter—Oh, that'll be enough, sir.—*Boston Transcript.*

The Vicar—For shame, my lad! What have those poor little fish done to be imprisoned upon the day of rest?

Tommy—That—that's what they get for—for chasing worms on a Sunday, sir.—*John Bull.*

Two Irishmen arranged to fight a duel with pistols. One of them was distinctly stout, and when he saw his lean adversary facing him he raised an objection.

"Bedad!" he said, "I'm twice as big a target as he is, so I ought to stand twice as far away from him as he is from me."

"Be aisy now," replied his second. "I'll soon put that right."

Taking a piece of chalk from his pocket he drew lines down the stout man's coat, leaving a space between them.

"Now," he said, turning to the other man, "fire away, ye spalpeen, and remember that any hits outside that chalk line don't count."—*Lippincott's.*

IN CHAUTAUQUA CIRCLES

All the officers of the Circle at Chautauqua, New York, are men.

Chautauqua Circles in Wilson, Barker and Ransomville, New York, cultivate neighborhood spirit by telephone and interchange of visits.

The Chautauqua Circle at Mabton, Washington, is the intellectual center of the town. Its membership includes the mayor, the city clerk and several other officials.

Des Moines, Iowa, has thirty Chautauqua Reading Circles with a membership so large that two city federations are organized, one called the Union and one the League.

The Coudersport, Pennsylvania, Chautauquans maintain not only a Reading Circle but an alumni association called The Hall in the Grove. Their headquarters, The Chautauqua Temple, is a meeting-place for the various women's clubs.

The board of directors of the Long Beach, California, Chautauqua Assembly, at a recent meeting appointed Dr. H. A. Devlin, dean of the summer school, and Miss Cornelia Adele Teal, dean of the Chautauqua Home Reading Course. The C. L. S. C. of the Home Reading Course is an important feature of many of the Assemblies.

Emlenton, Pennsylvania, has a Chautauqua Circle of eighty members, including people from every church and walk in life. The meetings are held in the moving picture theater, an innovation which may be helpful in other places in these days when so many towns are bewailing the evil tendency of amusements and town standards.

Brooklyn Chautauqua Alumni, a large organization of graduates of the four-year Chautauqua course, celebrated their twenty-fifth anniversary on November 10. Mr. D. Harris Underhill, chairman of the celebration committee, is a member of the first class of 1882; Mr. J. H. Lant, president of the association, is a member of the class of 1895; Mr. E. K. Todd, secretary, belongs to the class of 1896.

For the summer season of 1915 Chautauqua Institution already announces a special week's program on "The Remaking of Modern Europe" and a Music Festival Week. Mr. Melville E. Stone, manager of the Associated Press, and Dr. Katharine Bement Davis, Commissioner of Corrections, New York, are listed for addresses. Mrs. Percy V. Pennybacker, president General Federation of Women's Clubs, is to be Federation Day speaker. Among the series lecturers announced are: Mr. Earl Barnes of Philadelphia; Professor Scott Nearing of the University of Pennsylvania, on "The Human Note in Economics"; Professor S. C. Schmucker of West Chester Normal School, on "The Ascent of Man"; Mr. Edward J. Ward of the University of Wisconsin, on "The Social Center Movement." The season will open July 1 and close August 29.

EAGER & BABCOCK

THE YEAR IN FINANCE AND TRADE

BY ALBERT W. ATWOOD

EDITOR "BUSINESS AMERICA," LECTURER ON FINANCE IN NEW YORK UNIVERSITY

ANYTHING like a conventional, normal narrative of the year 1914 in finance and trade is out of the question. Possibly it would be feasible to review the chief events up to July 23, but at that point finance and trade fell like a house of cards before the devastation of war. When Austria sent its now famous ultimatum to Servia and precipitated the Great War, the year was for all practical purposes split in two.

Nineteen Fourteen, it must be confest, was a year of depression in this country. There is always great danger in generalization, and the fact that this is a vast country whose natural resources and wealth seem to be but little affected by international disturbances or Wall Street catastrophes cannot be too often repeated. It has been said that our foreign trade is but one per cent of our domestic trade. Merely to supply the ordinary needs of one hundred millions of people keeps many a factory going. Crops have been perhaps the largest in history, and crops are the backbone of American wealth.

But allowing for all these facts and throwing in for good measure what is perhaps the greatest of all our natural resources, a splendid geographical isolation from Europe, it is still true that 1914 was not only a year of relative financial and business gloom, but was such even before the war drew a still darker cloud athwart the sky. The closing month witnesses a distinct improvement which may carry far, but before we consider the future let us see just what the earlier months of the year brought into being.

I have named July 23 as the dividing point. Now of course any study of the movements of gold from country to country, of the 1914 tax budgets of the European powers, or of the general course of the great European bourses for the last two or three years will reveal a frantic preparation for, or at least, intense fear, of war. But on July 23 the smoldering fires burst thru the earth and became evident to the ordinary four senses where before their significance if not their existence had been perceived only by a sort of fifth sense. So I think it is safe to work up to July 23 and then work beyond it.

In general it may be said that the very first and last parts of 1914 have been the happiest from the economic standpoint. In the last quarter of 1913 reaction and depression were overdone. There was an "over-pessimism," not only in this country, but in Europe, where fears of what might result from the Balkan wars had been given much weight. Idle money piled up in all the financial centers of the world and consequently in January the stock markets bounded upward and a marked improvement in trade was hoped for.

But January's improvement did not last. From that month forward the historian has but little of a cheerful nature to relate. In August the whole machine of international trade, foreign exchange, stock exchanges and so forth crumpled like paper and almost went to pieces. Not until October was anything like real order restored. November witnessed a slow but steady improvement, and in December for the first time in eleven months has the general financial situation warranted even a sigh of relief. Look for a moment at a few of the details.

A world-wide easing of money rates at London, Paris, Berlin and New York distinguished the month of January. At New York there was an accumulation of reserve money at the rate of $3,000,000 a day. A message from President Wilson to Congress, recommending important trust legislation, but being at the same time conciliatory to business, acted as a stimulus. There was a rapid rise in British Consols in London and a New York state bond issue of $50,000,000 was five times oversubscribed.

In February advances in the world's stock markets halted. The foreign cables told of a precarious financial situation in Paris. Above all people began to wonder why the promise of bountiful crops did not find some echo in reviving trade, why, in the words of Wall Street, this glorious promise was not being "discounted." Then came March, and while stock markets were very quiet, the movement was mainly to lower levels. The political situation in Great Britain in reference to Ireland caused

NOTE. High grade bonds, it will be observed, are but little lower than a the end of 1913, which was a period of acute depression in the bond market.

depression abroad. But of far more importance in this country was the fact which began to dawn upon people that the railroads were in a "bad way," whether from their own or others' fault mattered little.* The greatest railroad systems laid off thousands of men and many companies stopped paying dividends. The Mexican revolution developed further and proved a disturbing element in the business world.

Approach of the United States to the brink of war with Mexico was the overshadowing influence in April. The railroad situation grew worse, the steel trade became duller than ever, stocks fell to new low levels since June, 1913. Abroad there was much talk of financial trouble on the Continent. Splendid crop prospects affected the price of wheat, but exerted no influence on general trade. In May the most curious factor was still the refusal of the country to cheer up because of crop prospects. Abroad the great government banks continued to take in gold at an unprecedented rate. A big banking failure involving many Canadian enterprises disturbed London. Russian securities fell into panic at St. Petersburg; new taxes were suggested by Lloyd-George in England; indeed there was every sign of financial preparation for war, if foresight had only been as good as "hindsight."

In June stock markets did not move much, but developments were largely discouraging. Europe depleted our bank reserves by taking $47,000,000 of our gold. A number of dividend reductions were announced. Several more large financial failures were announced abroad. The great New York jobbing firm of H. B. Claflin & Co. failed.

In the early part of July the most spectacular feature was the steady decline in stock prices, New Haven and Missouri Pacific falling to new low records for all time. No doubt the difficulties of these particular companies played a part, but in view of later events there is every reason to believe that Europe, and especially Germany, had long been quietly dumping stocks on the American markets. Then on July 23 came the Austrian ultimatum from Servia, and before taking up the new thread it may be well to examine a little more closely the exact condition, financially and industrially, of the United States, in the last week of July, 1914.

The writer has been able to read something like a thousand answers received by an important national organization which had sent out in October a questionnaire in regard to business conditions. The questionnaire was addrest to officers of railroads, manufacturing companies, national banks, savings banks, street railways, insurance companies, associations of manufacturers, wholesalers and retailers, boards of trade, labor unions, state federations of labor, state labor bureaus, provident loan societies, and governors of states and mayors of cities. From these first-hand sources of information, as well as from many others, I can safely infer that in the last week of July the general situation of business *was far from satisfactory*.

The reasons for this condition, a condition existing despite enormous crops, were probably many. A change in the tariff, following much discussion of the subject; discussion and legislation on banking and trusts; the Mexican trouble; and the attitude of the Interstate Commerce Commission toward the railroads, probably all played a part. It is enough for our purpose to note that such a state of facts existed, and that certain fundamental industries such as transportation, iron and steel, lumber, electrical, machinery and cement trades, and in general everything connected with construction work and to a considerable extent the building trades—were in the last of July in almost a *deplorable* condition. Opinion is divided as to whether matters were then on the mend, or whether a progressive decline was indicated, the balance of opinion probably inclining to the former view. To this situation came the European war with its direct and in-

*See the table on page 457.

direct consequences, both of which have been to aggravate the existing disturbance in business affairs, or to retard the improvement which was pretty generally hoped for.

On July 27 the Vienna Bourse closed, and from the 23d to the 31st all stock markets were practically in panic, our market falling from five to seventeen points on July 30. On the 31st the London and New York stock exchanges closed, the Bank of England raised its rate from four to eight per cent, foreign exchange operations became demoralized, and $40,000,000 of gold was sent from this country to Europe in five days.

To tell the story of what followed July 31 would take many pages. The New York Stock Exchange was closed to prevent European owners of some six billion dollars of American securities from selling as much as they could of their holdings and thus draining this country of gold. Charles A. Conant, the economist, has compared the situation to the collapse of Roman authority when barbarians overran the empire. Chancellor Lloyd-George has said that the "paper machine had crumpled and somehow got out of order." The National City Bank of New York spoke of the "painfully developed structure of modern civilization as having been wrecked."

To retail the financial and business effects of the war is impossible. But it may be noted that the results were direct and indirect, the latter being by far the more important. The war at once stopped all exports because there were no shipping facilities available. This condition has slowly been remedied, but not until it had proven a great blow to the South. About half the annual cotton crop goes abroad, and the crop this year was an abnormally large one. But the cutting off of about half the demand drove prices down to around seven cents a pound, where they still are, and well below the cost of production. Thus the South has lost perhaps a billion dollars and its recovery to normal conditions will be slow and painful. But with this exception the direct effect of cutting off our normal relations with Europe has been relatively moderate. A few manufacturers have suffered from a lack of German dyestuffs. But any loss, except that of the South, has been probably more than made up for by the steadily increasing export of munitions of war needed by European nations, an export movement which began soon after the first demoralization gave way to something like order, and has since been increasing.

Then it must be remembered that in the essentially agricultural sections of the country other than the South, local conditions have pretty well counteracted the ill effects of the war. The unusually large crops of wheat, corn, hay, vegetables and fruit have kept practically at normal the great farming region west of the Mississippi and east of the Rockies as far south as Texas, and also portions of northern New England and certain districts in California.

6%

Your January Funds

Where to Place Them to the Best Advantage

PRINCIPAL, Interest and Dividends available for investment can be safely and profitably placed in the 6% bonds of the American Real Estate Company, based on its extensive ownership of real estate in the Boroughs of Manhattan and the Bronx, in New York City, and in the City of Yonkers, adjoining New York City.

Since 1888 these bonds have been favorably known to thousands of individual investors as A-R-E Six's, and it may be to your advantage before placing January funds to know about the American Real Estate Company, its bonds, and the successful business back of its bonds.

In the assurance of income and the safety of principal, real estate and obligations based upon it offer unusual attractions at this time when the general security market is upset.

A-R-E Six's are not mortgage bonds,—they are debenture bonds, and have been bought by the public for 27 years without a dollar lost or gone astray. They are the direct contract obligations of the American Real Estate Company, issued in two forms, as follows:

6% Coupon Bonds

In denominations of $100, $500, $1000 and upward, interest payable semi-annually by coupons attached, and principal maturing in ten years.

6% Accumulative Bonds

Maturing in ten, fifteen or twenty years, for $1000 and upward, purchasable by installments. The installments bear interest at 6%, which is compounded annually, accumulated and paid with the total installments at maturity.

Write for full information concerning the Company and its bonds.

invested in first mortgages in Oklahoma City real estate. We have never had a loss. Interest paid promptly. Value of property three times amount of loan.

Write for **free** booklet describing our business and list of loans. We have loans of $150.00 to $10,000.00

Aurellus-Swanson Co.
60 State National Bank Building. Oklahoma City, Okla.

WANTED $100,000

I wish to get in touch with some person having capital to invest in farm mortgages in a section where this method of investment is unknown. Farmers borrow from banks on short time and high rate of interest. I know that more than $100,000 can be placed with security as good as government bonds, with more than double their return in interest, which in most cases will be payable in advance. I can satisfy anyone interested as to my honesty and business ability. Address

J. M., care of The Independent

But the indirect effects of the war upon this country have been terrible indeed. Our foreign trade is relatively unimportant in itself, but as a regulator of our financial relations with other countries it is fraught with tremendous significance. Our normal excess of exports over imports enables us to pay Europe the $300,000,000 of annual dividends and interest which we owe as well as our tourists' expenses abroad, freight charges on foreign owned ships and many other items. The war instilled a fear that we might be called upon to pay off immediately in gold our debts to Europe, both the floating debt of perhaps $250,000,000, and as much of the six billion dollar permanent debt as Europe could collect. This is why our Stock Exchange was closed from July 31 to December 12. This is why the financial markets were thrown into panic, and it explains the tightening of the money market which resulted in further restricting activity all over the country. Banks thruout the country became very conservative; interest rates advanced, and money was hard to get for the conduct of ordinary business. For new enterprises and for extensions, in fact for all permanent improvements, capital was not available.

Thruout September financial markets were still under the blighting influence of war. Stock markets remained closed, international exchange was demoralized. Early in August men feared a panic more disastrous than any before experienced. But action both on the part of bankers and the Government was marvelously quick. A panic was prevented. Private hoarding of gold was stopped at the beginning, whereas in 1907 it went very far. Fortunately the panic of 1907 had taught lessons which had not been forgotten. Banks at once issued several hundred million dollars of Clearing House certificates which enabled them to pay each other without using actual money. As early as August 4 the Treasury Department had shipped to banks in leading cities, to be placed in circulation, $100,000,000 of emergency currency, created in 1908 and held in Treasury vaults for just such an emergency. Altogether no less than $381,530,000 of these notes were issued, and together with the Clearing House certificates they largely made up for the loss in gold to Europe earlier in the year, and in general for the lack of money and credit.

The most single pressing problem was how New York City was to meet some $80,000,000 of notes due in London and Paris between August, 1914, and January, 1915. These notes were legally payable in gold, but ordinarily the payment of such debts is effected by means of exchange operations, by the offset of exports from this country against debts owed by this country. Such a normal solution was not possible, so all the banks in Greater New York with two small exceptions subscribed to a gold pool and thus without difficulty the necessary sum was raised. A little later the successful formation of the "$100,000,000 gold pool" by banks all over the

country that were anxious to restore still further normal exchange conditions was an important development. Sterling exchange, which early in August had been as high as $7, which necessitated the payment of seven good American dollars for $4.86 of American money provided the payment had to be made in London, fell in October to normal figures.

In October also the New York bank deficit was extinguished, the money situation became distinctly easier, and while Stock Exchange business was still suspended, in quarters where securities were dealt in there was—toward the end of the month, in particular—a marked improvement in prices. Railroad earnings and trade in general did not improve, but the reduction in dividends by the United States Steel Corporation in particular, and by other large concerns such as the Amalgamated Copper Company, was considered a sign of conservatism and safety rather than the reverse.

November was a period of marked financial betterment. Banks began to retire Clearing House certificates and emergency currency, which are now a thing of the past. Savings banks had earlier refused to pay on demand, but in November restored that privilege without harm to themselves. Industry generally remained quiet, but improved slightly. Steadily increasing exports of war munitions had a considerable influence. Both the copper and oil trades were badly hit by the war, but in November they again approached normal. The election was, on the whole, gratifying to business men, even to those who strongly admired the President, and the opening of the Cotton Exchange was felt to be a big step toward restoring normal conditions.

On the same day, November 16, the Federal Reserve system was inaugurated, and this measure was looked upon as an assurance that panics would be almost impossible in the future. Thus far the Federal Reserve banks have not actually transacted much business, but the sentimental effect of their opening in the way of cheering up sentiment and making business men more optimistic has been incalculable.

One hesitates to predict the future of the Federal Reserve system, but it is at least safe to assume that in future periods of depression, war, or threatened panic, this system will sustain the business community and the credit structure.

One of the most striking lessons of the war from an economic standpoint had been the ability of the Bank of England especially and the other great central banks abroad to maintain the business and credit structures under circumstances more trying than the world has ever seen before. Indeed this fact more than any other leads me to hope that there will not be any mad rush on the part of foreigners to sell their American stocks when our exchanges open for business on a free basis. On November 28 the Stock Exchange opened for restricted trading in bonds, and on December 12 for similar trading in stocks. The first two weeks of bond trading revealed no torrent of sales, and none was expected when the stock division opened. Minimum prices were artificially established, but many prices did not fall even to the minimum.

The truth seems to be that during the four months that the Stock Exchange remained closed a large sum of capital accumulated for investment and that time gradually did away with any necessity for a bursting dam of foreign liquidation of American securities. Foreign liquidation may be considerable, but it will be deliberate; and while the destruction of property in Europe is enormous, and enormous also are new European bond issues, it must be remembered that owing to increased wealth and a far more efficient credit machinery the powers of recuperation of Europe are vastly greater than they were in earlier times.

Many of those who predict a severe further decline in American investments forget that even with the recent improvement in prices the quotations for both stocks and bonds are now very low, not only as compared with every normal years for a long period, but also indeed as compared with panic prices of 1907. The extensive declines which took place both in 1913 and 1914 on the world's markets no doubt reflected the coming of war.

The development in the use and organization of credit in Europe today so far exceeds anything known in previous wars that the burden to be borne, while onerous enough, is less than many persons suppose. As for this country, beyond expressing doubts as to the likelihood of extremely pessimistic views being justified, it is unwise to indulge in much prophecy. If the railroads should be permitted to raise freight rates a very considerable stimulus will be given to business. The effect to capture markets in South America and the Orient will also stir up activity, altho we cannot expect much in this direction until we are willing and able to take England's place as the creditor nation of the world.

Aside from the war the year has witnessed a number of disturbing incidents, events and tendencies. The Colorado strike was significant. Agitation for government ownership of telephones and telegraphs, and other expressions of prevailing political propaganda did not tend to encourage enterprise. But opposed to these matters and of more importance is the fact that the Great War has set this country upon a path where economy and thrift may bid fair to take the place of wasteful extravagance. Not only does the United States enter upon its full responsibility as a great world power, but it enters upon new duties more serious and yet fuller of promise than any we have ever faced, with a new sense of seriousness and a new responsibility for the best use of its unequaled resources.

Princeton, New Jersey

Could An Employee Cause You Loss?

Is there anyone whose dishonesty could impair your bank account, perhaps cripple your business? A great majority of employees are honest, of course, but nevertheless defalcations *do* occur. Suppose the next one should affect you? What protection have you?

It is easy to make yourself safe now. Don't wait until the lesson is brought home to you. Profit by the experience of others and bond your employees in the Company that provides absolute protection.

The American Surety Company of New York

Largest Surety Company in the World

has earned, during the past 30 years, an enviable reputation for the prompt payment of just claims.

Independent Opinions

Our correspondence is unusually interesting just now. The stirring times in which we live have at least one benefit in that they take people out of themselves and force them to interest themselves in affairs foreign to their personal circle. This is in truth a world war, not merely because nations from every continent except South America are taking an active part in it but because it very literally affects everybody in the world and almost everybody feels that it does. The clash of arms in the valley of the Seine or the Carpathian Mountains sets the ether quivering with alarm round the whole globe and away into stellar spaces. Here in America we feel the blows whether they fall upon white, black or yellow skins and we understand the laments of the dying whether spoken in Czech, Magyar, Arabic, Flemish or Ruthenian.

A well-known American woman living in Germany gives in a personal letter to her father the following vivid picture of the German spirit as it manifested itself in the first month of the war:

MY DEAR FATHER:

It is as clear and beautiful a Sunday morning here in Freiburg as you can be having there in Denver. The church-bells are ringing the people to Gottesdienst. The town itself, a university town which dates from the middle ages, is quiet and blooms like a garden, giving no sign except for its Red Cross banners flying from schools and public buildings, that we are in the midst of a world war, unequaled in history, both in extent and in meaning. Yet, had I chosen, I would rather be here in Germany at this time than anywhere else! Never in my life have I felt so close to a great heroic emotion as during these last four weeks!

As you know, I have no German blood in me; moreover, I have been for nearly two years in Paris, which I have loved; and certainly, I have never stood for militarism, yet at this moment, after four weeks of the most careful and *intense* observation of the course of events, I feel that Germany is fighting with terrible energy the fight of the races, which still believe in God and Justice, against those who have forgotten the sternness which lies in these two great concepts. God and the fear of God are realities in Germany today, where every one is aware of a re-birth —a *Wiedergeburt*. Press and pulpit are one in the utterance of a reverent acceptance of what has happened as God's will. And there is no cant, no phariseeism in this utterance!

I have yet to read or to hear a personal complaint or protest against the swinging of the whole mechanism of the

state into a position of *National* defense, even tho it has meant bankruptcy to thousands and the danger of death to millions. On the instant the individual subordinated himself—his future, his life, to the nation—to the race. Show me that that is true in any of the countries which have ranged themselves against Germany. Here in Freiburg the announcement of martial law was read in all the public squares. Then came the order to mobilize. And it was as tho all of Germany held its breath. Then—marvel of marvels to me—came a burst of song. From street to street, in this town, as in every town in Germany, rang out the "Wacht am Rhein," "Deutschland über Alles," and Luther's old hymn, "Ein Feste Burg ist unser Gott." These are grand songs in words, rhythm and melody, sonorous—not to be sung by one man alone, but by men together, from the common heart.

In Munich, where I spent the next two weeks, I heard night after night the troops marching out under a harvest moon, thousands of men in marching lines, thirty thousand volunteers from Munich alone. And they all sing.

Women, white faces, lips close-prest, came back from the parting at the station to the duties which the men had been forced to leave on such short notice. There has been no time for leisurely anxiety or mourning. They are all at work, doing many things they have had small preparation in, but doing them well, because of the intense feeling that as far as possible the work of Germany must go on at as small a loss as possible. Into the fields where the crops of grain, hay, fruits and vegetables were left so suddenly have poured the boys and girls from the cities, under the direction of old men who could not go to war.

No man may dare to predict the outcome of a struggle in which Germany and Austria stand against the nations. But I know that in Germany the great victory has already spread its banners. A people with prayer in its heart and song on its lips has become united, without distinction, "as *one* man." And America I call to look with reverence upon this victory, no matter how it may read of the battlefields, whose stories come by way of the rest of Europe, if not thru the strange writing of Japan.

CHARLOTTE TELLER

Freiburg, in Baden, Germany

THE TU QUOQUE ARGUMENT

Whenever we find fault with what Germany is doing somebody writes in and wants to know why we don't find fault with the other powers for what they have done in the past. Now we cannot scold every country of the world in any one issue, much as we should like to. We have to take them to task one at a time. We are glad that the liberal doctor quoted below recognizes the influence of American public opinion in checking British aggression in China a few years ago. He will find by referring to the files that The Independent at that time took an active part in opposition to Great Britain.

In a recent issue you take the position that Japan is justified in ousting Germany from China, because Germany took possession by force and because

she is alleged to be the same disquieting element in the East that she is in Europe. Now why, in the name of fairness, do you remain silent as to the manner in which England came to squat on Hong Kong or Russia in Mongolia? Who taught Germany this game of piracy? As a matter of fact Germany got a foothold under circumstances less revolting to decency than England, the excuse, tho flimsy enough, being the killing of two missionaries.

However, I challenge the world to instance a darker blot on civilization than the manner in which England obtained possession of Hong Kong and other Chinese territory in 1840. To foist the most pernicious of all curses, the opium vice, upon a nation whose government has become alive to the physical, moral, and intellectual ruin following in its wake, and then because that government determinately opposes the traffic, it is forced into a war, and, because she is no match for England, is whipped, has to cede territory and—joke of all jokes!—pay her foe's war expenses, and in her utter helplessness, submit to the curst opium vice.

You may say this is not England of today. Again I would remind you that when a few years ago China astonished the world by her superhuman efforts to eradicate the opium curse, England very forcibly objected, because her opium remained unsold in Chinese ports and she could no longer coin human weakness into filthy lucre and outrage a nation's morals. China would then most certainly have been humiliated as in 1840, but an enlightened public opinion exprest its indignation in no uncertain manner, especially in America. This won the day for poor China.

MEDICUS LIBERALIS

Cleveland, Ohio

SOCIALISTS AND THE WAR

It is a curious tribute to the wide influence of the Socialist propaganda that there should be so general a feeling of disappointment that the Socialists should not have done something to prevent the war. Even those who have been most opposed to the views of the Socialists and most contemptuous of their power have evidently been relying upon them more than they would be willing to admit. On the other hand, those who believed that the power of capitalism would be sufficient to stop the war have been equally disappointed. It seems that people are not, as we have been told, the helpless victims of proletarian and capitalistic forces, but that they can take the bit between their teeth and run away and smash up the whole machine whenever they take the notion. We feel something of a relief to realize that, in spite of blind economic forces, we can still do what we want, however unwise what we want to do may be. The realization of this may help toward the adoption of a more rational method of settling social problems than "the inevitable class conflict" of which we have heard so much. The German anti-Socialist society has disbanded because of the patriotism displayed

by the Socialists in this crisis, and when after the war both they and their opponents turn their attention again to the unsettled questions of labor and capital, it will be with a disposition to seek together for a solution. A war makes friends as well as enemies. Both capitalists and Socialists have had a lesson and may profit by it. In our issue of October 12 John R. McMahon voiced his bitter grief at what he regards as the failure of the European Socialists to rise to the occasion, and the following letter from the associate editor of the *International Socialist Review* shows that he is not the only one of his party who takes this view of it.

Permit me to congratulate you on the able article on "Socialism's Moral Collapse." Mr. McMahon hits the nail on the head and shows us where we must begin to rebuild. His article is an indictment of the European Socialists. They have failed most miserably to live up to their principles of internationalism. Let me thank you for giving us an opportunity of looking at ourselves in the mirror. MARY E. MARCY

Chicago

The minister of the Church of the Messiah writes to the author as follows:

You are the first Socialist that I have found who has been honest enough and brave enough to admit the awful tragedy of the betrayal of socialism's ideals and pledges by the European comrades. I said in my pulpit two weeks ago that this collapse of socialism was the greatest disappointment that I had ever encountered in my life. I went on to point out that it was not the practical failure of the movement in this crisis that has disheartened me, as failure from sheer weakness is common enough in the realm of moral struggle. What was tragic was the inglorious character of the failure. The moral and spiritual bankruptcy of the movement—the cowardice and treason involved in the whole wretched business! And yet, plain as the case is, our American comrades here can find nothing better to do than apologize and explain! Thank God that you dare to face and confess the facts! So far as my knowledge goes, your article is the only evidence that I have that American socialism has not undergone a moral collapse only less terrible than that of European socialism. JOHN HAYNES HOLMES

New York City

HOW TO GET REAL REPRESENTATIVES

A good many voters in New York became skeptical of the new direct primaries law when they found themselves confronted with half a hundred names about which they knew even less than they do about the candidates on election day. One of the baffled voters set himself to consider how this could be remedied and he evolved the following plan for a system of gild representation:

Which is a failure, the primaries or our electoral system?

SAFE DEPOSIT VAULTS
BOXES $5.00 AND UPWARDS

Primaries are excellent; only our electoral system is a farce; give the ballot to all, men or women, to minors even when it comes to labor questions affecting the working conditions of minors. Only don't expect your voters to know all the candidates to office well enough to pick "good ones" out without the help of a machine. Primaries in a village are fine; everybody knows everybody else. In large communities the voters may know one or two of the candidates by name, by their newspaper reputation; and then they have to cast their vote blindly for a string of individuals whose appearance and biography are to them a dark mystery.

The remedy? Let every trade and profession vote for a certain number of representatives taken from its rank. Physicians, grocers or bricklayers could select intelligently a few physicians, grocers or bricklayers who would know the needs of their profession or trade; then the elect of the "multitude" would operate a second selection from among themselves. A saloonkeeper or any other variety of professional politician is purely misrepresentative; besides, his ignorance is bound to be encyclopedic; therefore his votes based on no real knowledge must of necessity reflect the aspirations of the small group which picked him out for perfectly sordid purposes.

Until our electoral system changes we will all of us vote for machine men. We cannot honestly vote for men we know nothing about; we cannot be expected to know all the men likely to present themselves for election and therefore we will vote for some one vouched for by some group we are at least slightly acquainted with, that is, a machine man.

A clever friend of mine bound to break up "the machine," but unacquainted with any of the candidates for nomination at the recent primaries, split his vote among all the parties; if the procedure wasn't tragic it would be highly entertaining.

THE RURAL UPLIFT MOVEMENT

It appears from the following letter that the farmer, or at least his wife, does not receive in a spirit of pure gratitude the efforts of those who are interesting themselves in him. But what are we to do if our philanthropic energies cannot find an outlet in the open country? The South Sea islanders were long ago civilized and will soon be extinct. The "other half" who live in the slums are getting very touchy about our walking into their tenements uninvited and giving them good advice. The natives of the rural districts offered the most inviting field, but already, it seems, they are inclined to be uppish and resentful of patronage. Stefansson discovered a fresh tribe of Eskimo, but he got out a patent on them and won't let any one else work them. Unless some new opportunity opens for the exercize of our philanthropic instincts we shall all soon be suffering from ingrowing altruism.

We live on a small farm of seven hundred and twenty acres. We have

had some hard times, but the farmer is the pet of the public. We can hardly pick up a daily paper that we are not made conscious of this fact. Bankers especially feel very tenderly toward the farmer, and most bankers are more or less interested in real estate. Recently I noticed a meeting of bankers, who voted $30,000 for buying alfalfa seed to help the farmers. This seed is bought in quantities at a low price and is sold out to the farmer at an advance, which of course materially helps the farmer to get rid of his surplus money. Bankers will loan a prosperous farmer at least one-fourth the value of his property, taking a mortgage at almost any low rate, like ten to twelve per cent interest, or in case of small loans to meet a sudden need like sickness or a funeral, for some three per cent a month. This makes it pleasant for the bereaved; it gives them something besides their losses to think of; they forget their sorrows in scheming and planning how to meet the loan at the time of its fulfilment, and if it cannot be met or the interest paid, then this is added to the principal and the farmer has still more to take his mind off of other troubles. In fact, in many cases he is so thoroly and effectively relieved, that he finds he has no farm and no stock and no anything left to worry about; all he has to do is to let the money loaner take his farm, utensils and belongings, when the farmer can fare forth independent and untrammeled by worldly goods. If he chances to have a family each member can also fare forth; the world owes them a living and they'll get it if they pay a big enough price for it in labor.

There are leagues to sell the farmer his groceries; there are leagues to make things pleasant for the farmers' wives; there are visiting ladies who go around in automobiles and spend a half day or more or less in the farm kitchen to teach the farmer's wife how to strain milk and cook potatoes, and incidentally give idle farmer's wife the pleasure of healthful exercize, by making ready a banquet for the benefit of the visitor.

Uncle Sam has always been anxious about the farmer. In the winter ten thousand farm women were invited to write to their Uncle and tell him what he could do to make them happy, and before they had written he answered by sending out bulletins about various matters which ought to help, and probably did help, the writers of the same financially.

Every now and then the railroads get busy and assist the farmer. They assisted in disposing of five three-year-old mares for us, gratis. Of course, we could not expect any remuneration for the young mares, but we were very much helped, by not having them to feed, to breed, to harness, train and care for. The railroad in question had kindly left their "right-of-way" fence down, to make it convenient for the young stock to take a pleasant walk on the ties.

Every night the farmer and his family pray, "God bless the *Public* and keep them busy petting us, so that we may not be subjected to the temptations of wealth and that we may be likened to the swine in our pens, which are worth twenty cents a pound when cut up and packed in glass jars for bacon, while we ourselves are worth hardly our own weight in the dust of the earth. Amen."

INSURANCE

CONDUCTED BY W. E. UNDERWOOD

This department of The Independent will undertake to furnish on the request of readers any information respecting the business of insurance and the companies transacting it which we have or can procure. We cannot, however, pass upon the debatable comparative differences between companies that conform to the requisite legal standards set up for all, except in so far as the claims made by any of them seem to be inconsistent with the principles of sound underwriting. Address all communications on insurance subjects to the editor of the Insurance Department.

THE GREATEST OF ALL

In an address delivered before the Association of Life Insurance Presidents at the Hotel Astor, New York, last week, Hon. A. Barton Hepburn, chairman of the board of directors of the Chase National Bank, incidentally rendered a tribute to the system of life insurance that has seldom been equaled. Mr. Hepburn was discussing a decidedly dry subject: "The Relation of Life Insurance to the Credit Fabric of Business." It would be difficult for the average man to work up any enthusiasm over this theme; nor would he be aided in that direction by anything the speaker said. He is a practical and successful business man, and there was little opportunity on this occasion for the indulgence of sentiment.

Of course, there is science in finance, and it is admitted that Mr. Hepburn stands with the leaders at the head of that profession in America. He treated his subject in a scientific manner. Pursuing its parts sequentially, and laying them bare for the benefit of his auditors, in the naked phraseology of business, he came in time to this unadorned statement:

"All benevolent work deserves commendation. The figures I have given you, showing the growth of life insurance in force, show the public appreciation of this greatest of all humane instrumentalities for equalizing the burdens and alleviating the sufferings of mankind, which would otherwise exist."

It is natural, and perhaps pardonable, in a man that he should experience emotions of great satisfaction and approval over the expression of opinions identical with those he himself holds. Be that as it may, I confess to feelings of more than ordinary pleasure in hearing from the lips of a hard-headed man of business, after years of experience, the admission that life insurance is the *greatest* of all humane instrumentalities. I am sure it is true, and, like a religious zealot, have preached that doctrine everywhere and at all times.

The words of the great banker should sink deep into the memory: "Life insurance is the greatest of all humane instrumentalities for equalizing the burdens and alleviating the sufferings of mankind."

A DANGEROUS INNOVATION

Last week a committee of the National Convention of Insurance Commissioners held a protracted meeting in New York City and at great length considered the texts of six proposed bills covering the matter of making and supervising fire insurance rates. To be both concise and specific, the object in view is in some way, in greater or lesser degree, to place the function of rate-making within the jurisdiction of the various state insurance departments.

To the average buyer of fire insurance protection this seems to be a move in the right direction. All insurants will agree that their rates are and always have been too high. Doubtless this conclusion is due to the fact that the buyer in no way participates in the making of the rate. He has become accustomed to asking the seller what the price is to be and of acquiescing in it either gracefully or grumblingly. As a matter of fact he has fared better than he thought for, unscientific as are the principles governing the making of fire insurance rates, the powerful competitive influences of the big American and British companies have, by and large, kept the price at a reasonable and safe point. By the term "safe" is meant a figure that leaves enough margin fully to preserve the solvency of the insurers.

Those who are inclined to welcome the interposition of governmental authority in this matter should not judge too quickly, and, as a student of and writer on insurance subjects, I do not hesitate to predict that if the plans of some of the insurance commissioners are generally adopted and state insurance departments are permitted in any considerable degree to interfere at this point with the relations between insurers and insured, it will not be many years before the latter will heartily regret the innovation. The present experience of the country with the governmental regulation of railroad rates should be a warning of the difficulties of this sort of governmental action. True, insurance companies cannot yet be compelled to carry risks as railroad companies are forced to carry passengers and freight. But the law-makers may yet tackle that problem. At present the insurance companies may decline business rated too low by state insurance departments and if the worst confronts them they can convert themselves into banks or investment institutions, as did the Citizens' Fire Insurance Company of Baltimore on December 1.

It would be well for the citizens of states in which such legislation as that

alluded to in the first paragraph of this article is proposed to examine into the subject closely and to demand of its authors and advocates the fullest demonstrations of its ultimate results before permitting it to find a place on the statute books.

NOTES AND ANSWERS

The policyholders of the Prudential Insurance Company, or as many of them as cared to, balloted on December 7 on the proposition to transform the company from a stock to a mutual organization. The vote cast aggregated 941,005, of which 940,797 were in favor of the plan and 208 against. A report will be made to the Chancellor of New Jersey and if he is satisfied that the provisions of the enabling act have been complied with he will confirm it subject to a hearing on December 22.

S. H., Sullivan, Ill.—On January 1, 1914, the financial condition of the company you mention was: assets, $645,956; total liabilities (exclusive of capital stock of $100,000), $483,783; surplus as to policyholders (including the capital), $162,173. In 1913 its income was: from premiums, $328,974; all other income, $36,598; total income, $365,572. The total disbursements were $184,882, including $55,339 paid policyholders. The company issues participating and non-participating policies (an unfavorable feature) and on the annual dividend and deferred dividend plans. Deferred dividends are objectionable and that system is forbidden under the New York law. The company is properly managed and growing steadily. Inquiry will be made about the farmers' contracts.

V. M. Emmet, Buffalo, Minn.—Will reply later.

The Mutual Benefit Life Insurance Company announces another increase in regular dividends, the third advance made since 1900. The dividend scale adopted that year was continued thru 1909; the scale adopted in 1910 was used for that and the succeeding year and the one adopted in 1912 applies to date. On January 1, 1915, the new increased scale goes into effect. Using the Ordinary life policy, age thirty-five, and the fifth policy years as an illustration, we find the dividends per $1000 declared to be as follows: 1909, $3.56; 1911, $3.83; 1914, $4.29; 1915, $5.39.

Cheerful Old Lady: "Well, Dominie, the new churchyard's fillin' up real nicely, ain't it?"—*Puck.*

She—The waiter is hanging around as tho he expected something.

He—Oh, yes; he's a tippical waiter.—*Providence Journal.*

"Ah, my poor man," said the benevolent old lady, "I suppose you are often pinched by want and hunger, are you not?"

"Ye—s, and cops."—*Cincinnati Commercial Tribune.*

"Some things can only be seen at Christmas," sentimentally remarked Mr. Slide. "That's a fact," agreed the practical Mr. Shuttle. "For instance, the dirt the janitor brushes off your arm."—*Judge.*

A SCOTCH AMBIGUOUS WARNING

The Scotch minister rose and cleared his throat, but remained silent, while the congregation awaited the sermon in puzzled expectancy. At last he spoke:

"There's a laddie awa' there in the gallery a-kissin' a lassie," he said. "When he's done ah'll begin."—*Ladies' Home Journal.*

First he bought a bale of cotton, to help out the starving farmers of the South.

Then he bought a bale of poetry, to help out the starving poets.

Finally he bought a bale of securities, to help out the starving brokers of Wall Street.

That ended it, however.

"I knows when I've got enough," he exclaimed, with a baleful look.—*Life.*

Honesty is the best fire insurance policy

FIRE

insurance means more than honest intentions. Six out of every seven fire insurance companies organized in this country have failed or abandoned the business. To live and furnish real indemnity a company must have resources to back up its honest intentions.

The Hartford Fire Insurance Company has lived through every great disaster that has visited this country in the past 104 years. It has met its obligations cheerfully and faithfully. It does the largest fire insurance business in America.

The Hartford Agent in your town is a good man to know He can be relied upon to secure for you the manifest protection of the policies of the Hartford Fire Insurance Company.

Nobody wants a fire. We have a booklet that tells how to prevent it. Send for a free copy. Use the coupon.

GET THE SAVING HABIT

The habit of saving has been the salvation of many a man. It increases his self-respect and makes him a more useful member of society. If a man has no one but himself to provide for he may be concerned simply in accumulating a sufficient sum to support him in his old age. This can best be effected by purchasing an annuity as issued by the Home Life Insurance Company of New York. This will yield a much larger income than can be obtained from any other absolutely secure investment. For a sample policy write to

The New Books

THE LATEST WAR LITERATURE

When military science was suddenly made a required study in the curriculum of every reader there was a lack of suitable text-books. The public libraries were poorly supplied with reference works on the subject and those they had were not what was wanted. The classics of strategy were antiquated. The manuals prepared for the education of officers were too technical. Consequently the news from the seat of war was unintelligible and the comments of editors and re-write men often made confusion worse confounded.

Now, however, we have an admirable book prepared for the purpose by Major General John F. O'Ryan and Captain W. D. A. Anderson, *The Modern Army in Action*. After a general discussion of strategy and different forms of organization and methods of training, a chapter is given to each of the arms, infantry, cavalry, artillery, etc., and finally under the heading "Combined arms in action" we have an admirably written description of just what the commander and his subordinates do in handling a division on the march and bringing it into battle. It is rare for expert writers to have so clear an idea of the needs of the lay reader as is here shown.

Paris War Days is the diary of Charles Quinan Barnard, an American newspaper correspondent of long residence in Paris. It covers the period from August 1 to September 15 and is largely concerned with the doings of the American colony when the city was under the shadow of the German invasion. Enough names are mentioned to sell out the first edition. Its chief interest for others lies in such vivid glimpses as the following:

Disappointed Parisians scanned the sky in vain for their five o'clock *taube*. A *marchand-de-vin* on the famous "Butte" of Montmartre arranged a tribune with numbered seats commanding a splendid view of the city. Field-glasses were on hand for hire. Orchestra stalls were paid for at the rate of ten cents a seat. The performance was announced to begin at half-past five. This worked very well yesterday, when the evolutions of the two German air-lieutenants, accompanied by pyrotechnic display, netted a lucrative harvest. Today, however, the enterprising theatrical manager was forced by his public to return the money at the "box office"; this was promptly done, the performance "being postponed." The postponement was due to the appearance of several French aeroplanes, which evidently had been sighted by the Germans.

They have organized a new sport among the air-scouts. Every day, at the end of the day's reconnoitering, the airmen count the bullet-holes in the wings and body of their machines. The aeroplane that has the most is the cock machine of the squadrilla—six in the squadrilla—and holds the title until some one gets a bigger peppering and displaces him. They are very jealous of this distinction, and the counting has to be

"Why has Mrs. Chubby given up her trip to the Orient?" "Why, she happened to hear that travel broadened one."—*Puck*.

very carefully carried out by an impartial jury, for the cock aeroplane has the honor of carrying the mascot of the squadrilla.

The third book in this group deals neither with strategical theory or Paris personalities, but consists of a series of vivid snapshots from the men in the trenches who are doing the hard and dirty work. *Tommy Atkins at War* is an ingenious compilation by James A. Kilpatrick of brief quotations from the soldiers' letters published in English papers. The courage, cheerfulness and kindliness shown under the most distressing conditions are marvelous, but reading of it increases our horror of war, which wantonly destroys those in whom it has demonstrated these virtues.

Everybody will like to read of the personal experiences of Richard Harding Davis *With the Allies*. He is "with the Allies" in every sense of the words and vigorously denounces Americans who attempt to preserve a neutral mind. His attitude would have more weight if it were not for the suspicion that inevitably rises in the reader's mind that his intense animosity for the Germans might be due in part to the fact that he was in danger of being "treated as a spy" by the Germans when he was caught within their lines without credentials. Few Americans have had more experience as a war correspondent or know how to describe a scene or portray a mood more effectively than Mr. Davis. He is not here concerned with strategy or tactics, but shows very vividly how the Germans looked as they marched thru Brussels and how Louvain and Rheims looked after they had done with them. It is a significant fact that all our American correspondents, Davis, Cobb and Irwin, have come back with the most intense loathing for war in itself. Does this mean that war is more horrible than ever before or that people have grown more compassionate?

The H. W. Wilson Company, whose handbooks on current questions for debaters are well known, have issued an equally useful *Handbook of the European War*. It contains extracts from the diplomatic correspondence, statistics of the countries involved, quotations from important speeches and articles on both sides and an annotated list of the "Best Books on the War." The volume will be very convenient for reference in school and public libraries. We are pleased to see that the editors have found The Independent useful as a source of material. They reprint from our pages with due credit the articles by Count Okuma of Japan, Professors Rudolf Eucken and Ernst Haeckel of Jena, Professor Pupin of Columbia and J. D. Whelpley as well as our diary of the Great War.

Sir Conan Doyle's *Great Britain and the Next War* is one of the "I told you so" class of books now becoming so numerous. It was published a year ago in the *Fortnightly Review* as a warning to the British public instigated by Bernhardi. Curiously enough he overestimates the danger from the German submarines. In considering the question

of how it would be possible to transport a British force to France or Belgium and maintain it there he says "We could not do it." But the British have done it without interference for four months. Still as it turned out the Channel tunnel that Sir Conan Doyle advocates would have been very handy.

Robert Blatchford disclaims any intention of saying "I told you so" in reprinting under the title of *Germany and England* the series of articles he contributed to *The Daily Mail* five years ago. Yet no one has a better right to claim foresight, for at that time he put plainly before the English people the aims of the pan-Germanism movement and urged them most eloquently to prepare to meet it by raising an army of half a million men under Lord Kitchener, so they would be ready to be thrown into Belgium at a moment's notice. If England had heeded his warning and taken his advice, would the result have been different? It is an interesting question for speculation tho hardly profitable now. Altho Mr. Blatchford is a Socialist, he believes, like the Socialists of Australia, in universal military training, which he advocates not merely as a measure of safety, but for its moral discipline. "The German nation is an army. The British nation is a mob of antagonistic helpless atoms."

H. G. Wells is always interesting, always stimulating to thought, and the articles he has written for the periodical press since the war began are even more effective when brought together in the little volume *The War That Will End War*. He begins unprepossessingly with the assertion that England would not be in the war if Germany had not violated the neutrality of Belgium and Luxemburg, a statement that Sir Edward Grey would be far from endorsing. But some of his suggestions as to ways of securing peace in the future are worth considering, especially his proposal that the manufacture of arms be made a national monopoly and no sales made to private parties or other countries.

On the German side one of the most remarkable of the anticipations of events now being brought to our attention is *The German Empire's Hour of Destiny* by Herman Frobenius, the author of half a dozen previous works on strategy and military history. As Sir Conan Doyle and Professor Cramb endeavored to arouse their countrymen to the imminence of the German menace, so Bernhardi and Frobenius warned the Germans that they must prepare for a combined attack of France, Russia and Great Britain. Colonel Frobenius' forecast of the war turns out to have been, on the whole, remarkably close, tho like most prophets his date was wrong. He predicted the outbreak of the war for the spring of 1915, but this is a pardonable mistake for he based his anticipation on the fact that by 1915 Russia would have completed her strategical railroads and fortifications in Poland and France would by means of the new three-year service law have brought her army to a greater

strength than she could ever have it again and that England would have to strike then before the German navy got too big to handle. He could not of course have anticipated that a Servian assassin would precipitate the great conflict eight months in advance of the time it was due. He was also mistaken in assuming that England would play a strong rôle on the sea and a weak one on the land. Instead of this the British army has done a great deal and the navy very little. So far England has shown no disposition to land an expeditionary force in Antwerp or in Denmark as he anticipated. Like other German authors he has taken our diminutive fire-eater "General" Homer Lea altogether too seriously.

One American's Opinion of the European War is shared by so many Americans that it is hardly worth while putting it into book form. Mr. Whitridge finds the modern Germans have deteriorated in manners and morals and art, and he believes that they should not attempt to spread their own nationality, but should "fertilize other peoples" by emigration and ideas as they did formerly.

Editorials which Edward S. Martin has been publishing in *Life* he now brings out together under the title of *The War Week by Week*. Here we have no discussions of strategy or pen pictures of battles, but chiefly comment in a light satiric style on the rights and wrongs of the present struggle, decidedly Teutonophobic in tone.

Under the infelicitous title of *Remember Louvain!* E. V. Lucas has published a little collection of patriotic poems to inspire the hearts of Englishmen. Whittier, Whitman and Longfellow are represented as well as Macaulay, Tennyson, Wordsworth and Kipling.

The war was too sudden for the English to get properly angry at the Germans, so the necessary animosity has to be worked up afterwards. We realize that, but still we cannot commend the effort made to instill contempt for the King's cousin into the mind of British childhood by a comic picture book, *Swollen-Head William*, with such rimes as this:

> Look at William! There he stands,
> With the blood upon his hands.
> His moustaches daunt the sky,
> Pointing to his great Ally.
> What of Heaven William thinks
> Is no riddle of the Sphinx,
> But a matter much more dim
> Is what Heaven thinks of him.

We are surprized to see E. V. Lucas's name on such a collection. Evidently the war has a bad effect on taste as well as temper.

What Clarkson Is Doing for the Book Buyer—

IN several hundred thousand Libraries in the homes of people in every walk of life—**almost every book was bought of me. WHY?** Because, **I have no agents** and **sell you just the books you want all new many at a saving of from 50 to 90 per cent**—you examine the books in your own home for five days before paying for them. If not satisfied return them at **my expense**—and **owe me nothing.** Write for my new catalog—it's free.

Sample Prices:

The Eyes of the World, 90c
Their Yesterdays, 35c
Winning of Barbara Worth, 35c
Casting of Dan Matthews, 45c
Shakespeare, 40 vol. full flexible Morocco, largest type and best notes of any Shakespeare published, publisher's price $96—my price $24
Library of Oratory, 15 vols., publisher's price $15—my price $1.75
Messages and Papers of the Southern Confederacy, 8-4 Morocco, publisher's price $15—my price 98c
Home Library, 8 vols. cloth, publisher's price $4—my price 85c
Wild Animals of North America, publisher's price $3—my price 45c
Popular Garden Flowers, publisher's price $3—my price 65c
Girdling the Globe or Journeys Around the World, over 600 pages of ever-changing scenes of interest, publisher's price $2.50—my price 45c
Orations, Addresses and Club Essays, publisher's price $1.50—my price 42c

Here are De Luxe Editions, Morocco bound, elegant paper, many of them at less than 25 cents on the dollar—Hugo's Complete Works, $9.40—Kipling, $7.80—Poe, $4.90—and all other standard authors at similarly low prices.

Get My Big, New Catalogue

My new catalog, sent free for the asking, tells you **how to save 50 to 90 per cent on thousands of books.** Every book new and fresh, and **guaranteed** to please **you**—you to be the judge. I do not quibble, and would rather have a book or set of books returned at my expense than to have a dissatisfied customer.

David B. Clarkson, The Book Broker
110 Clarkson Bldg. Chicago, Illinois

WHEN

——a reference work earns its cost in two hours;
——a clergyman calls it "a boon to ministers";
——a professor advises all his students to buy it;
——clever women find it a "prize" to business women;
——it has more articles than an encyclopædia seven times its size, and is more up-to-date, yet costs one-thirtieth as much;

GOOD TO GIVE—GOOD TO GET

The Joyful Heart

BY

Robert Haven Schauffler

Author of "Scum o' the Earth." "The Musical Amateur," etc.

This bracing volume of essays shows how to **make life worth living.** It's a real "guide-book to joy"—inspiring, companionable, sane; radiant with a warm, friendly humor that makes it good to **live** with, especially in times of stress like these.

And it's **practical.** It really does help you to find joy in your daily life, in your work, in your play. It's a beacon light on the road to happy, efficient living.

"The Joyful Heart" is as good to look at as it is to read. In every way it's **just the book for Christmas giving,** and to give **yourself** too. Get it at your bookstore **today** or send us $1.25 plus postage on 20 ounces, for each copy, and we will mail whenever and wherever you wish.

TRAVEL INTELLIGENTLY

Before starting on your trip get our catalog of Travel and Guide Books. The greatest enjoyment of Travel is the understanding and knowledge of the things you see. We cover the world.

THE TRAVEL LIBRARY, WASHINGTON, D. C.

Blatchford. New York: Edward J. Clode. 60 cents.
The German Empire's Hour of Destiny, by Herman Frobenius. New York: McBride, Nast & Co. $1.
The War that Will End War, by H. G. Wells. New York: Duffield & Co. 75 cents.
One American's Opinion of the European War. New York: E. P. Dutton & Co. 50 cents.
The War, Week by Week, by Edward S. Martin. New York: E. P. Dutton & Co. $1.
Remember Louvain, by E. V. Lucas. New York: The Macmillan Co. 40 cents.
Swollen-headed William, by E. V. Lucas. New York: E. P. Dutton & Co. 50 cents.

A HANDFUL OF PUPPETS

Such a gay, deceitful villain, such a virtuous heroine, and a platitude or painstaking philosophy on almost every page of *In the Web of Life!* Virginia Terhune Van de Water is a conscientious writer who "stands for the highest and best"—and makes one long for "the flesh pots of Egypt."

Hearst's Intn'l Library. $1.25.

CALVIN AND CAPITALISM

The influence of Calvinism on the rise of modern capitalism may be somewhat obscure, but it is none the less real. This and other relationships between religious ideas and economic theories and developments are clearly shown in Archdeacon Cunningham's scholarly lectures published under the title *Christianity and Economic Science.* The volume seems to turn the tables on the Marxians.

Longmans. 90 cents.

WHAT A YOUNG MOTHER SHOULD KNOW

Eminently sane and sensible advice to inexperienced prospective mothers is contained in the little book: *Before the Baby Comes*, by Marianna Wheeler, for twenty years superintendent of the Babies' Hospital, New York. It may save some helpless little martyrs from overmuch experimentation for mothers to heed the regimen which long experience backed by scientific knowledge has tested and proved best.

Harpers. $1.

HOW TO FASHION REEDS

The Basketry Book, by Mary Miles Blanchard, is not, as one might guess, a book on Indian work, but a practical volume of "twelve lessons in reed weaving." The art is here plainly set forth, with plain directions for the making of each kind of basket. The definitions are precise, the illustrations and the colored diagrams of methods large and clear. With so explicit and thoro a guide the amateur by herself could certainly make good headway.

Scribner. $2.

SAVING THE YOUTH OF THE CITIES

During seven years as president of the Juvenile Protective Association of Chicago, Louise de Koven Bowen, author of *Safeguards for the City Youth at Work and at Play*, has seen much of the disregard of the great industrial city for the morale of its children. Her own experience has taught her many measures for the prevention of delinquency and the improvement of working and recreational environments.

Macmillan. $1.50.

THE WONDER OF THE YEARS

Under the familiar name of Pierre de Coulevain the late Mlle. Fabre in a

series of conversations and anecdotes, under the title of *The Wonderful Romance*, looks back over the span of years and musingly tells what wisdom her gropings toward the "Heart of Life" have taught her. Love, faith, religion, spiritual vision and miracles are discussed in the simple, intimate way possible only to one from whom the years have rolled away the burden of self-consciousness.

Dodd, Mead. $1.35.

DAYS OF THE SPANISH MAIN

More than three centuries ago John Esquemeling, a Hollander, after being planter's servant and physician's slave, joined the roving plunderers of the Spanish Main under Captain Morgan. In his *Buccaneers of America*, first published in English in 1684, he recounts faithfully the exploits of the great pirateers and marooners from the time of Pierre le Grand to the burning of Panama. Much unauthentic material included in earlier editions of Esquemeling's narrative has been omitted.

Stokes. $2.

BEYOND THE CANADIAN ROCKIES

The Northwest Mounted Police once more restore the order of the Dominion's western provinces in *The Patrol of the Sun Dance Trail*, by Ralph Connor. An Indian uprising, the machinations of a clever chief, the married love of Corporal Cameron, who has figured before in the tale of the same name and courtship on a ranch beneath the Rockies, combine to make an interesting story full of action.

Doran. $1.25.

OUT OF A CLAM SHELL

Cape Cod has not been exhausted as a mine for novelists. *Kent Knowles: Quahaug*, by Joseph C. Lincoln, is the latest story of a Cape Cod man whose neighbors call him "the Quahaug," otherwise, clam. His housekeeper and cousin Hephziba is one of the ladies best worth knowing in recent fiction. The heroine who transforms the Quahaug into a responsive and responsible human being, is so extremely disagreeable that she must have been unusually beautiful for even a lover to forgive.

Appletons. $1.35.

THE LADDER OF EVOLUTION

The student and the lay reader both will find in *The Wonder of Life*, by J. Arthur Thomson, M.A., LL.D., Regius Professor in the University of Aberdeen, a welcome book. Designed as a complementary reference work to other books which introduce the student to natural history and biology by an analysis of the individual rather than by a first broad view of animated nature.

Henry Holt. $3.50.

AN ANCIENT CRAFT

An artist craftsman is George J. Cox, author of *Pottery*, an artist alive to all the fascination of color and form—a craftsman versed in every detail of his art, and into this short book, unique in makeup and illustration, he has compressed a deal of exact direction, important alike to student and teacher.

Macmillan. $1.25

An Unprecedented Situation

AS WE are about to prepare for a new printing of the Encyclopaedia Britannica, we are confronted with the fact that there is a forty per cent. increase in the cost to us of India paper, and the leather manufacturers have notified us of an embargo placed by Great Britain upon the exportation of leather. Furthermore, many of the beautiful double-page maps have hitherto been printed at the famous geographical house of Justus Perthes at Gotha, Germany, of which no more can be obtained until after the war.

Meanwhile, the demand for the new Encyclopaedia Britannica is still unsatisfied. This is so because the book is a good book and is sold at popular prices and on easy terms.

The last printing of the new **Encyclopaedia Britannica** was completed some months ago, and 7,500 sets of 29 volumes were distributed to buyers as rapidly as the binders could supply them. Of this last printing we still have on hand less than fifteen per cent.

In A Few Weeks All Sets Now On Hand Will Have Been Sold And We Then Shall Have To Take Orders Subject To Delay In Delivery

We have often pointed out that the production of a comparatively small edition of 5,000 sets (145,000 volumes) takes four months' time. The India paper has to be made, the skins for the beautiful leather bindings are bought abroad, imported, and then prepared as covers, and the press work and the binding contracted for and organized well in advance.

We will have to pay more for paper and more for leather and, therefore, we shall have to charge the subscriber more. This increase in the selling price will be inevitable because of circumstances over which we have no control.

Therefore:

First: Those who want a set of the new Britannica at the present price should place their order at once because the next printing will of necessity be sold at a higher price.

Second: The sets now on hand will last but a few weeks and no new copies can be completed, if the work is begun at once, inside of four months

In other words, those who **expect** to buy the work **some day,** but who put the matter off, will not only have to wait for the next printing, but they will have to pay a higher price based upon the higher prices of materials.

If You Wish to Investigate This Great New Book, Send Us Your Name and Address

We will send you a most interesting account of the publication of this work, which was first issued in 1768-71.

It will give you something of the book's wonderful history, of its successive appearances during almost 150 years ("always increasing its sale, its usefulness and its influence") how this new 11th Edition, published by the Cambridge University Press, of England, was written, and the names and achievements as workers and pioneers and experts of its 1,500 writers drawn from all lands—the kind of information it gives, its up-to-dateness, its authority, its universal usefulness, its world-wide outlook, and what it gives you about the causes of the war in Europe, its magnificent full-page plates and modern maps, its practical utility in every direction, how it is printed on the now famous thin India paper (described as "an inspiration of genius," because it made a large quarto volume as easy to handle as a magazine), how it is bound, packed and shipped, who and what classes of Americans have bought it, and what they say of it; what is said of it by great educators like ex-President Eliot of Harvard, great lawyers like Joseph H. Choate, great men of business like E. H. Gary, great authors like G. W. Cable and Owen Wister; who are the men and women who own it in your own state, and county, or your own town (if you want their names). *The story of the publication of the new edition of the Encyclopaedia Britannica is a veritable romance of modern industry.* Merely to receive all the facts about it is to supply yourself with information about an enterprise "which has placed the whole world under an undying obligation."

Encyclopaedia Britannica, Ind. 2
120 W. 32d St., New York

I am interested in the new Encyclopaedia Britannica and shall be glad to receive by mail full particulars about it.

EFFICIENCY QUESTION BOX

CONDUCTED BY EDWARD EARLE PURINTON IN CONNECTION WITH THE INDEPENDENT EFFICIENCY SERVICE

THE Independent begins with this instalment the Question Box by means of which it extends to its readers the services of Mr. Purinton as an efficiency expert. Questions—which should be confined to one sheet of paper and address to The Independent Efficiency Service—will be answered either thru the pages of The Independent, without any mention of the inquirer's name, or by personal letter. Inquiries on the subject of personal efficiency as it relates to health, work and business will be answered by Mr. Purinton. Questions have been received in large number from all over the United States, and Mr. Purinton asks the writers' indulgence until it is possible to reply to their letters. They will all be treated in these pages or by personal correspondence as soon as possible.

---

1. A. R. W., Vermont. "I am in charge of the office work of a small business, and wish to accomplish the most that the position makes possible. The article on 'What Is Efficiency?' came to me as exactly the spur I need. I have read it aloud three times, and given my copy to others to read. I am anxious to have a list of books on Efficiency, also on Health."

Your Efficiency problem is four-fold, including relations to yourself, to your clients or customers, to your employer, and to your clerks. Take four sheets of paper; label them Self, Client, Employer, Clerk; analyze these four relationships and, without anybody's help, ask yourself how they can be improved; write down the difficulties, weaknesses, frictions or wastes; then reason out your own solution to your own problem. The first aim of the Service is to rouse people to think and act for themselves—action should both precede and follow information. Having classified your needs, write for a copy of *System* magazine, Chicago, price twenty cents. Read this magazine from cover to cover, and apply such editorials or advertisements to your problem as your judgment indicates. Organize weekly meetings of your staff to discuss Efficiency methods; give prizes for good suggestions; have each employee fill out the Personal Efficiency Test in our issue of November 30—and find what he or she needs most; let them send their personal questions on to us; then, as your work develops, write us the results as freely as you wrote the questions. Watch these columns for information on health, to be given in answers to other readers.

---

2. Mr. R. I. D., New York. "Will you kindly explain how a man may find his supreme talent?"

There are many ways leading to this personal discovery. We can here but start your investigation. Write to the Vocational Department of the Twenty-third Street Branch, the New York City Y. M. C. A.; also to Miss Jessie A. Fowler, of 18 East Twenty-second street, New York City; also to Dr. Katherine M. Blackford, of 30 Irving Place, New York City; also to the Boston Vocational Bureau, Boston, Massachusetts. Professor Muensterberg's book on "Psychology and Industrial Efficiency," published by Houghton, Mifflin & Co., will show you the methods of the psychological laboratory in revealing a man's vocation. Dr. Winthrop Talbot, of the Industrial League, Woolworth Building, New York City, has prepared a work on Human Engineering which may assist you.

3. Prof. J. E. Canada. "I have been my vague desire for some how to be efficient in the sense you outline, but I lack the concrete analysis. Would any of your courses be of value in this respect? My interest, of course, is that of the student and teacher."

Any standard work on Efficiency would be of value—my books are only a few out of many. The Service will compile a bibliography when the demand from our readers proves their recognition of the need. But you must know what you want before we can really aid you. Is it efficiency for yourself, your college, or your pupils? Are you aiming at a higher professorship? Does teaching satisfy you—or have you another kind of work in view? Did you fill out the Test blank in the article "What Is Efficiency" of November 30? If so, what are your weak points, and how will you gain strength? Suppose you remarked to a professor "I don't know whether I want to study chemistry, botany, or biology—will you kindly teach me music?" Absurd? Of course; but analogical. Find in your own heart and mind the one greatest thing you want to do or be—then write us again.

---

4. Miss M. A., New York. "I have had two years of nervous breakdown. What is the cause and cure?"

The cause may be physical, mental, emotional, or spiritual. It may be a complex of many causes. The cure lies in exact knowledge and systematic removal of the cause. Without knowing conditions we cannot offer specific suggestions. Moreover, the aim of the Service is not to write prescriptions, but to teach practical psychology and hygiene. If your physician desires our coöperation we shall be glad to give it.

A few general hints may be helpful. The modern cure for nervous prostration is a compound of these factors, and others. Absolute rest; quiet, void of monotony; seclusion, with right companionship; ten hours of sleep—and a daily nap if possible; gentle exercize, with slow, deep breathing; scientific massage; a bit of work out of doors; change of scene; mild applications of hot water baths to soothe nerves and cold ones to increase vitality; sun and air baths judiciously taken; food largely made of nerve and brain builders, rich in albumen, phosphorus, potassium, lecithin, the mineral salts in general—these foods being fresh fruits, whole wheat preparations, eggs of known lineage, succulent vegetables with juices retained; no stimulants, condiments or spices, meat confined to fish and fowl. And the greatest factor of all is mental poise. The nerves are electric wires, controlled by the brain; and the brain is a battery owned by the ego. Nothing but a sustained effort of will can steady the nerves for all time. Ask the Goodyear Book Concern, 339 Fifth avenue, New York City, for a list of publications on mind control.

---

5. Mr. W. F. R., New York. "We have about 1600 drivers of delivery wagons, and about 2000 members of our office force. You will be doing us a real service by showing us how to improve our delivery methods—but what, frankly, do you know about driving a truck?"

We know very little about driving a truck, but we know a good deal about leading the man who drives the truck; and to lead properly the man who drives your truck is to get a third more value out of your truck. Energy, accuracy, promptness, courtesy, loyalty, honesty, speed, cheerfulness, endurance—these are some of the qualities you desire to cultivate in your men—be they wagon drivers or department heads. Because of illness among employees you lose probably thousands of dollars a year. We should like to help save you this loss. Few of your workers, if any, are up to their highest pitch of mental capacity, few are gaining promotion as they might, few are really satisfied. Great institutions like the Efficiency Society and the National Association of Corporation Schools regard the education and inspiration of employees of the utmost importance, exceeding and preceding the technical training. The principles that make good corporation presidents will certainly make good truck drivers. We shall endeavor to teach those principles.

---

6. Mr. H. L. L., Illinois. "I am introducing Efficiency work among my classes in a denominational training school. Will you advise me what plan to pursue to get Efficiency results? I should like to have fifty copies of the Personal Efficiency Test, printed in The Independent; where can these be secured? Also I wish to obtain a small work respected by both the business man and the psychologist, to put in the hands of all my students. Is your 'Triumph of the Man Who Acts' a proper text?"

Efficiency in education is a subject demanding a course of reading by itself. We hope to be able to recommend such a course, a little later. The Independent is now reprinting the Efficiency articles from the issue of November 30, including the Personal Efficiency Test that you desire; also the booklet "The Triumph of the Man Who Acts." This reprint, in convenient form for class use, will shortly be available. We hope to outline and to meet, in a future number, the professional needs of the efficient teacher.

---

7. Mr. F. M., Pennsylvania. "My work seems to take every minute of my time, which makes a cog of me, and keeps me from learning the other fellow's job. My ambition is to become a cashier of a country bank, in the shortest and most efficient way. Would you advise an economic course in a night school?"

You can learn "the other fellow's job" while he sleeps—the best learning is done then. The people who do most are the ones who have the most to do. The actual work of the busiest men may be performed in three-fourths of a business day, the standards of work having been erected on the basis of inefficiency. Learn how to save motions, words, emotions, thoughts, and worries—and you will have at least an hour a day for personal study and experiment. However, do not tell your friends a word of your ambition—a vow lent is a vow spent.

By all means, take some good course at night school or by mail, first making sure that the diploma will give you real standing among business men. Could you not become a certified public accountant and do this work at night without jeopardizing your position?

Why not do this? Write a letter to the president of every important country bank in your state. Use fine stationery—you may have to go to Pittsburgh, where they don't know you, to have your letter typed; so you can get the right stationery there. Say to the president of the bank that you would like to be his assistant cashier when a vacancy occurs, and that you are now training for the position. Ask him to file your letter, give any suggestions he may have, hold your request absolutely confidential—and acknowledge receipt of your letter. Enclose stamped, self-addrest envelope. Make your letter short, but respectful. Do not let the typist know your name—address the inside envelope yourself and sign the letters after your departure from the typist's office; otherwise your resolve may leak back to your home town and cause the dissolution of your job.

You have in your hands the first element of success—a concrete ambition, with a determination to carry it out. Good luck surely awaits you.

JUST A WORD

Major Louis Livingston Seaman, M.D., who sailed for England and the seat of war on the seventh of August as the Staff Correspondent of The Independent, returned to New York on the "St. Louis," which arrived Sunday, December 20. Major Seaman has had varied and thrilling experiences, as the readers of The Independent are aware from the messages and articles which we have published. He was the first Red Cross surgeon on the scene of the first Zeppelin attack on Antwerp, and in order that he might be free to express his own abhorrence of this attack, he sent to the President his resignation as an officer of the Reserve Medical Corps of the United States Army. In company with Mr. Richard Norton, of Boston, he was instrumental in organizing in Paris the American Volunteer Motor Ambulance Corps, which has done such effective service at the front. He has made careful observation as to the sanitary conditions in the Allied trenches and in the hospitals of England, Belgium and France. During his adventurous journeys Mrs. Seaman was with him, and her experiences in the hospitals and at the front were almost unparalleled.

The first article reviewing the Hundred Years of Peace in the series of eight which The Independent has announced as the basis of its Peace Centenary Contest for American Schools, will appear in the third issue of February, which marks the centenary of the ratification of the Treaty of Ghent. The other articles will follow at weekly intervals, ending on April 5. It is interesting to report that twenty schools have already signified their intention of joining in the contest—altho the definite announcement has hardly yet been made public. The list covers schools in thirteen states. Full details as to the Prize Contest are now ready and will be sent on request.

From Ohio: "I am very much pleased with the magazine, and every one whom I have asked speaks very highly of it. I secured the six subscriptions in less than an hour's time among my friends in the Oberlin College Offices."

MADE IN
U.S.A.
What Every Business Man Ought to Know

THE Independent will publish in an early issue an important article by Dr. Edwin E. Slosson of its Editorial Staff, on "Made in U. S. A.," which will show how the label "Made in Germany" became so famous, and what steps may be taken to give the United States even greater prestige in the commercial world than Germany had gained before the Great War.

The article will consider the way the German government has co-operated with big business in the extension of foreign commerce and by promoting technical education has brought factory management and salesmanship into the realm of the exact sciences, the steps by which the Germans, occupying an old land of much less area than Texas, have within a generation made it one of the leading manufacturing and commercial countries of the world and at the same time kept it nearly self-supporting by its own agriculture.

The author of the article was for thirteen years Professor of Agricultural Chemistry in the University of Wyoming and is a lecturer on the subject of international relations in Columbia University.

The Independent

VOLUME 80 MONDAY, DECEMBER 28, 1914 NUMBER 3447

THE LESSON OF THE HUNDRED YEARS

ON Christmas Eve, one hundred years ago, three men from England and five men from the United States signed the treaty which ended the War of 1812. The act occurred in the quaint and now famous monastery of the Carthusian Brotherhood in the city of Ghent, in Flanders.

These men had talked for six months about the war, what caused it, and what each side should give or take. But the treaty has not a word about the things for which the two great nations fought. The people wanted peace, and the men they sent to Ghent made peace.

Peace has lasted a hundred years.

News was slow in those days, and the last shot of the war was fired at New Orleans on the eighth of January.

Three years later another scrap of paper was signed by men of the two countries. It is known as the Rush-Bagot Agreement, and by its terms the line between Canada and the United States was disarmed, and the war fleet of the Great Lakes reduced to four boats which could be blown to pieces in ten minutes by a single modern gun.

Not a shot across the border has been fired since—and not even the most thoughtful defender of the honor of either nation has been bold enough to urge the building of forts or the creation of a navy to protect each from the other.

The century of years, which it was hoped to celebrate with great and splendid ceremony, ends just when the world blazes with battle.

Along thousands of miles of fort-lined frontier in Europe, with armies of millions trained with the highest skill of great soldiers, death comes daily to thousands and the horrors of war are so terrible that they cannot be described.

The lesson is too simple and too plain to miss.

To be prepared for war—infinitely, perfectly prepared—does not prevent war.

To be prepared for peace, by agreement and of set purpose, has prevented war between two great nations for a hundred years.

This is the lesson for today, and the hope for tomorrow and for another Century of Peace.

THE SIGNIFICANCE OF THE RAILWAY RATE DECISION

THE Interstate Commerce Commission has risen to its opportunity. It has granted the prayer of the eastern railroads in the reopened rate case for substantial increases in rates. It is true that it has not given all the railroads asked or all they needed. The increases asked for would have yielded fifty millions of additional revenue. It is estimated by railroad men that the increases granted will yield thirty millions. Nevertheless the action of the Commission is cause for gratification. First because it gives to a public service inextricably bound up with the general well-being the assistance that at this critical time is absolutely necessary to its continued prosperity. Second because it establishes three important things about governmental regulation.

IN the first place, then, the decision gives to the railroads the increased revenues they sorely need. The need has been strongly asserted by railroad men. It is established beyond possibility of debate by the statements of the Commission. Let us see what the figures presented by the Commission show. The net operating revenues of the last fiscal year, says the decision, must be regarded as unduly low. While the gross revenue—the money, that is, which the railroads took in—declined less than three and a half per cent, the net revenue—or what was left after paying expenses—shrank more than seventeen and a half per cent. Not since 1908 have the net operating revenues of the railroads involved been so low as during the past year. In 1908 the roads paid $102,000,000 in dividends, and had left from the year's earnings a surplus of $47,000,000. Last year the earnings fell short of the amount necessary to pay the dividends of $118,000,000 by the sum of $8,200,000, which had to be taken out of the surplus accrued from preceding years. Six years ago, that is, the carriers made enough money not only to pay dividends of over a hundred millions to their stockholders, but to put away in a savings fund forty-seven million dollars more. Last year, the roads not only did not make enough money to pay their usual dividends, but had to dip into their savings fund to the extent of eight millions to make up the dividend payments. This last figure, indeed, does not represent the whole shrinkage in total surplus during the past year, which actually amounted to over thirty-four million dollars. In addition, the property investment account of the carriers—the amount upon which a fair return must be computed—has increased one and one-third billion dollars in the six years. In other words, the railroad properties are now worth thus much more than they were in 1908, and if the owners of the railroads—the hundreds of thousands of stock and bond holders thruout the country—are to continue to receive a proper return upon their money, the carriers must be enabled to set aside larger surpluses. A shrinking surplus and a growing property investment mean an inevitable loss to the holders of railroad securities.

The Commission has clearly indorsed what the railroads have stoutly maintained, that their net operating revenues are "unduly low."

The Commission further confirmed the contention of the roads by disposing of the counter argument that the shrinking net revenue was in large degree due to unwarrantably increased charges for additions and betterments. On this point the Commission forcibly sums up its conclusions in the words, "We cannot view with favor any attempt to obtain an increase in net revenue thru unduly restricted expenditures upon maintenance." From this view it is inconceivable that there should be any widespread dissent. The maintenance of the railroads in prime and continually improving physical condition is the essential guarantee to the public of better service and of increasingly assured safety.

The Commission further takes into account the effect upon the prosperity of the railroads of the extraordinary condition brought about by the Great War. The conflict, says the decision, will doubtless create an unusual demand upon the world's loan fund of free capital. Our railroads represent the bulk of European investment in this country. The rate of interest—the hire of capital—has risen during the last decade and may rise still further.

"We do not doubt," says the Commission in conclusion upon this point, "that the financial problems of the carrier have been made much more acute by reason of the war, and if we are to set rates that will afford reasonable remuneration to the carriers we must give consideration to the increased hire of capital as well as to other increased costs."

Taken altogether, the decision of the Commission gives irrefragable confirmation to the contention that the railroads need more revenue.

TO come to the second point, the Commission's action establishes three things.

The decision shows that a government commission can take a broad view of a situation which confronts it. It is never easy for a man or a body of men to reverse a position which has been publicly taken. It demanded open-mindedness and moral courage for the Commission to grant a request which it had once definitely refused to grant.

The decision has proven that it is possible for a regulatory commission to accord justice on behalf of the people to the business interests it is its function to supervise as well as to demand justice for the people from those interests. Regulation by commission need not be exclusive. It is possible for a commission to appreciate the fact that the public welfare is not to be advantaged by any action which spells injustice or detriment to the welfare of private interests. In the long run the people will prosper only as business prospers.

The decision makes it clear that a regulatory commission can be influenced by public opinion. There is good reason to believe that the Commission was at first disinclined to the affirmative decision which it finally rendered. There is ample evidence that the public sentiment of the country favored that course of action. The Commission was influenced by public opinion; and it was right that it should have been so influenced. In a democracy the ultimate force must be public opinion. Not the stray and wavering currents of public prejudice or public fancy, but the

strong, steady ground swell of deliberate public judgment. A commission, no matter how complete its authority or how heavy its responsibility, which should drive against such a tide, would have misapprehended its function and failed to discharge its duty. The Interstate Commerce Commission has not withheld its ear from the voice of public opinion.

THE EQUALITY OF PEOPLES

AMONG the desirable things that mankind could have if the conditions implied by an "if" were not conditional, the biggest is that spirit of universal brotherhood which would render wars impossible.

Of the flood of literature that the Great War has sent surging over the minds of the nations, probably more than fifty per cent may most truthfully as well as most charitably be described as "well meaning." It sets forth with more or less of charm and stimulating quality the wonderful things that could happen in this scarred and battered world "if" men would be reasonable, just, good-natured and unselfish. Unhappily it fails to tell us how to tempt, persuade or compel the instinctive, prejudiced, suspicious, sinful millions to change their natures over night, and become the exemplary beings posited in the logic of sentiment.

This big and familiar fact should not, however, discourage us. We should see it as a thing appealing to the sense of humor and not as anything to irritate. Above all, we should not regard it as discouraging effort within bounds of common sense. Man has made progress and he will progress further. He has brought the animal instincts so far under control that private vengeance and the local vendetta are no longer customary in civilized lands. He has greatly curtailed the number and the extent of wars between the more or less differentiated populations that compose the big empires and federations. Surely he need not despair of the possibility of preventing wars between nations. Thinking men who are not sentimentalists, and who are both hard-headed and far-seeing, look upon the proposition to create a system of nations strong enough to compel great powers to keep the peace, as feasible. It will surely enlist the earnest effort of millions of practical men and women.

Nevertheless, there are conditions to be fulfilled, and among these the scheme of organization is not the most important. The world has had convincing proof in the last fifty years that the adoption of republican constitutions does not necessarily make a republican people, and something more than a light-hearted agreement of the nations to enter into a federation for the inhibition of war will be necessary to prevent war in fact. There must be a mental and a moral unity, not only of purpose, but also of practise, and chief among the psychological factors we are disposed to place the acceptance of principles of human equality.

We do not now refer to such proclamations of equality as found their way into the American Declaration of Independence and the French Declaration of the Rights of Man. Nor do we have in mind those kinds of equality that have figured largely in the literature of the class struggle. We are thinking rather of an equality which pertains to the fundamental worthiness of man, which stands over against primitive prejudices, which is a product of friendly intercourse between peoples and races, and is an essential element in what President Butler has felicitously named "the international mind."

The point strongly insisted on by the Japanese people in all discussions of the relations between Japan and the United States serves well to give concreteness to our meaning. The Japanese do not contend that the United States should permit unrestricted immigration to our Pacific coast. That is a matter for our own decision; it lies wholly within the competence of American political sovereignty. They do contend that the United States should avoid action that appears to proceed from an assumption that the Japanese belong to an inferior race. Whatever treatment we mete out to peoples of the white race. we should mete out to peoples of the yellow race. We should recognize such facts as racial and national pride and self-respect. We are under no obligation to admit any alien to our shores, if we prefer to exclude him, unless we have bound ourselves by treaty. We shall give no offense in discouraging amalgamation by intermarriage if we treat all aliens alike in this respect, or if we confine our policies to racial or national elements that are citizens of the United States, but in all national dealings with other nations, we should act upon the assumption that in matters pertaining to essential human nature, to national pride and racial self-respect, the nations and races of the earth are equally worthy.

It cannot be contended that the powerful peoples of the world have as yet adopted this attitude, or that their populations think in terms of the ethical equality here under consideration. If animosities among nations are to be diminished, if the war instinct is to be curbed, it will in our judgment be necessary to cultivate a broadly human as distinguished from a narrowly national habit of thought in these matters. Nations must continue to create and to follow their own ideals in respect of many things, as the states of our Union create and follow their own ideals and cherish their local pride, in respect of local matters. But there are deep, fundamental conceptions and emotions of self-respect, of desire for the good opinion of mankind, of determination to go far on the path of progress, which belong to every people and to every race. Each nation must acknowledge and respect these deep facts of essential human nature. It must cease to vaunt itself as superior. It must frankly declare and act upon the principle that in these matters at least, whatever may be true in other domains, the peoples and races of the earth are equal.

SENATORIAL COURTESY

THE United States Senate has voted unanimously not to approve the appointment by the President of John H. Lynn as United States Attorney for the Western district of New York. There is no reason to believe that the whole Senate was convinced that Mr. Lynn would not make an efficient prosecuting officer. Senators voted as they did because Senator O'Gorman of New York invoked the traditional fetich of "senatorial courtesy." He asked his fellow Senators not to approve the President's appointment because he was not consulted before it was made.

This is not courtesy. It is bulldozing.

The requirement that the duty of appointing officers of the United States (with such exceptions as the Con-

gress may by law make) shall be exercized by the President "by and with the advice and consent of the Senate" is one of the checks and balances by which the framers of the Constitution aimed to prevent the tyranny of the executive. It is inconceivable that it was ever intended as a device for securing to Senators control of political patronage.

The fathers must have intended that this provision should be used in furtherance of the general welfare. It has come to be used in furtherance of the political welfare of individual Senators.

The responsibility for the administration of the executive departments of the Government rests squarely upon the President. The acts of his appointees are his own acts. No man should be held to full responsibility who is not given full authority.

The President's appointments should go unquestioned unless the Senate is convinced that he is appointing unfit men. But it should be the Senate that is to be convinced that the President has picked the wrong man, not Senator O'Gorman.

NEIGHBORS WE NEVER SPEAK TO

ONE effect of the war is shown in the increased interest being taken in the study of Spanish. New classes are being formed in the commercial colleges and evening schools to meet the sudden demand for instruction in Spanish from young men and women who have reason to believe that a knowledge of the language will soon be needed in commercial establishments. This is an encouraging sign of the awakening of the American people to the opportunities opening before them, but it must be remembered that the Spanish language is not a key that unlocks all doors to the countries south of us. There are some twenty-four millions of people in Brazil to whom a business letter or catalog in Spanish would be quite as distasteful if not as unintelligible as one in English. A country as large as the United States and as rich in natural resources is not to be ignored. The commerce of Brazil with the United States now amounts to some two hundred million dollars a year and could be much increased by the proper effort.

But to sell a man goods you must at least be able to speak to him. The deaf and dumb alphabet, good as it is, does not suffice for commercial purposes. Yet so far as we know there is not a university in the United States regularly giving instruction in Portuguese. President Branner of Stanford University has prepared an excellent *Brief Grammar of the Portuguese Language*, which should rather be called the Brazilian language, since there are four times as many people speaking the American form as the European. Professor Todd of Columbia gave a course in Portuguese two years ago and no doubt similar efforts have been made elsewhere to encourage the study of the language, but with little apparent success. It may be said that there has been no demand for instruction in Portuguese, and that is true. But neither has there been any overwhelming desire on the part of students to study Sanskrit and Assyrian, yet our leading universities have introduced these into their curriculum. A university should not confine itself to "filling a long felt want" but should anticipate future needs and afford its students an opportunity to enter new fields. The fact that Portuguese would be studied because of its commercial value more than for its literature ought not to debar it from a university which admits wood-turning and clothes-washing to its catalog.

LET US REMEMBER THE FUTURE

"REASON," said a great philosopher, "may settle any dispute. Fighting never settled anything."

The truth of this saying was never more apparent than at the present time, in view of the calling off of the Colorado coal strike. Fighting has exhausted the combatants and has brought weariness and exhaustion to thousands not directly participating in the conflict.

The empty treasury of the miners' union, the millions spent by the coal companies for defense, the wages and profits lost, the properties destroyed, the immeasurable injuries to the business of a great state, and innumerable minor losses, have accomplished far less than might have been accomplished had the industrial problem been approached in the spirit of justice and reason.

Now the popular cry is, "Let us forget the past."

To what end? That wrongs may accumulate, that abuses may multiply, that demagoguery may establish a fresh foundation upon which to base its appeal to ignorance and prejudice?

The Colorado labor trouble has not been settled. The fire died down for lack of more fuel. The strike has been called off because the union has no more money. The mines will continue to operate because law and order are established by military power.

This situation is merely a cessation of industrial warfare; it is not a settlement of the labor troubles. Such a settlement will be reached only when operators, miners and the people who use the coal, reach an agreement based upon reason, justice and a fair regard for the rights and welfare of all the parties concerned.

IT IS MAGNIFICENT—BUT IT IS NOT WAR

ONCE more the German navy has performed a feat that grips the imagination.

To all appearances it is safely bottled up in its home waters. Around its refuge lies the iron ring of dreadnoughts, battle cruisers, scouts, destroyers and submarines of the Mistress of the Seas. Every path to the open ocean is sown with mines of British planting. Every way out is patrolled by the enemy's ships. There it lies, hemmed in, impotent, overmatched.

Sudden as a lightning flash in a lowering storm half a dozen cruisers of the Black Eagle shoot out of the mist that hovers over the North Sea and bombard the coast of the boasted invulnerable isle. Where are the dreadnoughts now, where the cruiser patrols, where the swift heeled destroyers? Back to their harborage scamper the raiders, unscathed from their deed of daring. The odds are so great, the dangers so thronging, the probabilities of success so slim, that it is magnificent.

Magnificent—but it is not war.

It is not enemy ships that they have attacked, not fortresses that they have bombarded, not soldiers that they have killed. Three quiet, peaceful towns have felt the rain of shells; almost five score non-combatants, men, women, children perhaps, have met death from the hurtling missiles.

This is not warfare, it is murder.

THE STORY OF THE WEEK

THE GREAT WAR

December 14—Serbs retake Belgrade. British submarine dives under five lines of mines in Dardanelles and sinks Turkish warship "Messoudiyeh."

December 15—General von François defeated by Russians at Mlawa. Austrians drive Russians from slopes of Carpathians in Galicia.

December 16—German fleet shells Scarborough, Hartlepool and Whitby on English coast. Austrians completely driven from Servia.

December 17—French occupy Thann and other Alsatian towns. Germans capture Lowicz, Poland.

December 18—The Kings of Denmark, Norway and Sweden meet at Malmö, Sweden, to confer on how to preserve Scandinavian neutrality. England declares a protectorate over Egypt.

December 19—Sortie by Przemysl garrison. Heavy fighting between Arras and La Bassée.

December 20—General von Hindenburg concentrates troops between Bzura and Vistula rivers thirty miles west of Warsaw. Allies pushing forward from Dixmude and Ypres.

The Campaign in Flanders

The Germans have withdrawn from Belgium and France all the troops that can possibly be spared and the Allies are making every effort to break their weakened lines at some point. This has not yet been accomplished, but in several places the Allies have made slight gains. The hardest fighting continues to be about Dixmude and Ypres, in the little corner of Flanders which is all of Belgium that has escaped the German conquest. The Allies now hold both these towns and the Yser River and canal that connect them. From this line they are slowly but steadily pushing westward toward Roulers and Thorout. Between Dixmude and Nieuport the land has been flooded by the cutting of the dikes, but the Allied troops have made their way around the inundated area from both sides and with the help of the fleet have gained two or three miles of the coast in the direction of Ostend.

The new Governor-General of Belgium, General von Bissing, announces his intention of carrying out the mild policy of his predecessor, General von der Goltz, who has gone to Constantinople to take charge of the Turkish army. General von Bissing states that the Kaiser impressed upon him the necessity of doing everything possible to revive industry and improve the condition of the people. He ordered the provincial councils to meet on December 17 to take measures for the payment of a war levy of $70,000,000. The last installment of the first tax imposed by the Germans has been assumed by a group of Belgian bankers.

The Campaign in France

The renewed activity on the western wing of the Allied forces is not confined to Flanders, but extends into France from Armentières, which is just over the border, to Peronne. This north and south line of fifty miles has not permanently shifted much either way for the last three months, altho the fighting has been incessant. The latest French *communiqué* announces the gain of more than four thousand feet in the region of Notre Dame de la Consolation—a strange name in this connection. It was claimed that the Allies had again reached Lille, but this announcement appears to have been premature, for their advances in this direction have hardly carried them so far. The position of Lille in the war has been peculiar. It is a city of over a quarter of a million inhabitants, the most important manufacturing center of northern France. It was supposed to be strongly fortified, but surrendered without a struggle when the Germans reached it and has since changed hands twice without apparently suffering any serious injury from bombardment or street fighting from either party, altho the battle has raged all around it and smaller places in the vicinity have been demolished.

On the eastern wing of the Allied line the situation is interesting. It has been argued by many, most recently by Nikola Tesla, that there was no "necessity," even in the narrow military sense of the word as used by the German Chancellor, for the Germans to pass thru Belgium, since they might have invaded France from the eastern frontier in spite of the barrier fortresses. This, however, assumes that the Germans would have made as short work of the fortresses along the Meuse and Moselle as they did those of Belgium and northern France. But this is what they have not been able to do. It may be supposed that the Ger-

THE GERMAN RAID ON THE BRITISH COAST.

Scarborough, Whitby and Hartlepool were bombarded on December 16 in a "cross-raiding" expedition by a squadron of German cruisers. The shells killed 122 persons, mostly civilians. The significance of this event is discussed by Park Benjamin on another page

mans would have accomplished more than they have in this region if they had thrown the full force of their fresh troops against the barriers, but it is doubtful if even then they would have broken thru, for they have fought hard and persistently for four months to capture Verdun, the most northerly of the barrier chain, and have so far made no impression upon it. They have long had it invested on three sides, but it is still in communication with the rest of France by the southwest. In fact, they have not yet got near enough to the main fortifications of Verdun to bring their big guns to bear upon them.

The chief defense of Verdun is its location. On the west it is protected by the forest of Argonne; on the east by the wooded plateau between the Meuse and the Moselle known as La Woëvre. In the Argonne region the Germans have been able to make no decisive gains. In the Woëvre they had one striking success and no more. Between September 15 and 25 they succeeded in capturing Troyon and the Roman Camp, two of the forts of the chain which connects Verdun and Toul. This enabled them to cross the Meuse between these forts and take the town of St. Mihiel on the western bank. The French have not been able to dislodge them from this point, nor have the Germans been able to follow up this advantage. How hard every foot of the ground is contested in this region is shown by the triumphant cablegram of the correspondent of the London *Daily News* at Pont-à-Mousson on December 19 that "the French have advanced about nine hundred feet since November 1." At this point the German and French soldiers had so long occupied opposing trenches that they became friendly and were accustomed to bathe together in the stream between the lines.

The Invasion of Alsace

The French began their campaign against Germany in August by an invasion of Alsace and Lorraine. This movement was obviously dictated by political rather than military considerations, for while it cheered the hearts of the French to think that they were regaining their lost provinces, it accomplished nothing, for the French troops had soon to be withdrawn from this region to check the German invasion in northern France, where they might better have been put in the first place. Now, however, the French feel free to make another attempt, but this time they are proceeding more slowly and with greater surety. Advancing from Belfort, the most southerly of the barrier fortresses and next to Switzerland, they have crost the frontier and occupied the towns within ten or twenty miles of the border. Altkirch is their first objective, but this is being stoutly defended by the Germans.

The first French court in Alsace after forty-three years was opened at Thann with an affecting ceremony. When the crier announced the opening of the court "in the name of the French people," the old men who remembered the old regime before the German conquest burst into tears of joy, and the young men and girls in the picturesque Alsatian costume ran cheering into the streets.

The Advance on Warsaw

General von Hindenburg, who seems to have much the same temperament as General Grant, is evidently determined "to fight it out on this line if it takes all" winter. Having started out to march up the Vistula along its left bank from Thorn to Warsaw, he is still pushing forward in that direction in spite of all obstacles. The Russian attack on his left wing in the vicinity of Lodz being repulsed, he is free to advance on the right, and he has massed all available troops just south of the Vistula and behind the Bzura River, about thirty miles west of Warsaw. According to the Petrograd correspondent of the London *Times*, nine army corps, over 300,000 men, have been sent within a month to reinforce the German army in this region, which shows the importance attached to the taking of Warsaw. The Russians still greatly outnumber them, but the Germans base their hopes for victory on the belief that the Russian army has become demoralized by their recent losses, which include a hundred thousand prisoners taken since November 13, and a greater number of killed and wounded. The German War Office states 476,650 unwounded Russians are now held in Germany.

The German operations north of the Vistula appear to have made no headway. The army under General von François, which advanced southward from Soldau, got no further than half way to the Vistula, when the Grand Duke Nicholas caught it on the left wing with one of his characteristic flanking movements of the Cossack cavalry. The German army was defeated at Ciechanow, and General von François forced to

retreat into East Prussia. Another attempt to gain the right bank of the Vistula by crossing the river above Thorn was also checked. The Germans had occupied a small island in the Vistula and were constructing pontoon bridges here. But the Russians arrived in time to demolish the bridges with their artillery and captured the island.

Belgrade Recaptured

The Serbs are more than maintaining their ancient reputation for valor and invincibility. They were the one people of the Balkans which the Turks were never able completely to conquer, for in the fastnesses of Montenegro a remnant of the race preserved their independence thruout the five centuries of Ottoman supremacy. The rest of Servia was freed from the Moslem yoke a hundred years ago as the result of a revolt started by Black George, the swineherd, near where his grandson, Peter Karageorgevitch, has just led his people to a greater victory. The Servian minstrels have ever kept alive the memory of the heroic deeds of their ancestors, and their racial patriotism must have been raised to the highest pitch when their scattered army was reassembled on the Morava River and King Peter, now in his sixty-ninth year, rode down the lines on a charger, urging them to drive out the enemy or die for the fatherland.

The week before the Austrians had captured Belgrade, and they were then more than half way to Nish, the new capital. But when the Serbs turned upon them the Austrians could not make a stand against them, but were driven ignominiously back to their own borders, with heavy losses. Not a single Austrian now remains on Servian soil except as prisoner, but of these there are many; 60,000 taken since the war began, is the Servian claim. This astonishingly large number lends support to the rumors that the Czechs and other Slavs refused to fight the Serbs, and killing their Austrian officers, surrendered by the thousand.

The Austro-Hungarian army, split into three parts by the Servian onslaught, fled toward the Drina, the Save and the Danube rivers, which form the boundary of Servia on the west and north. The Serbs, hotly pursuing them, broke down the resistance of the detachments left on the Servian side to protect the retreating troops in their passage of the river; and quickly mounting their artillery on the bank, the Servian gunners shelled the pontoons and lighters conveying the Austrians across to their own shore. The soldiers threw their guns into the river in the hope, often vain, of saving their own lives. The rout of the invading army was so complete that the Serbs captured most of their arms and supplies, howitzers, machine guns, field kitchens, searchlights, horses, and hundreds of wagons of ammunition and provisions, so the Servian troops have a better equipment than at any time since the war began. The total losses of the Austrian side are estimated by the Serbs at over 60,000, but according to the Austrians this is an exaggeration.

The anger and humiliation of the aged Emperor of Austria on hearing the news of the disaster was exceedingly great, for he had just conferred a high decoration upon Field Marshal Potiorek on receiving his telegram that Belgrade had fallen and that he would be in Nish in three weeks. But the Austrians were able to hold Belgrade only twelve days when they had been more than ten times as long in getting it. In Vienna, Budapest and Prague there were street demonstrations, calling for the court-martialing of Potiorek. The real cause of the disaster was the overconfidence of the Austrian Government or the insistence of the Kaiser, which induced them to withdraw three of the seven army corps from Servia before the subjugation of that country was complete. It is true that these troops were most urgently needed in the defense of Cracow, and they proved their usefulness there by driving back the Russians half way to Przemysl. But this aspect of the affair makes it seem rather worse than better to the Hungarians, who regard Cracow as one of the defenses of Germany, and

have been highly indignant that no measures have been taken to protect their country from invasion on the north by the Russians or on the south from the Servians. Count Tisza, the Hungarian Premier, has gone so far as to intimate to the Emperor that if more attention were not paid to her interests by the combined General Staff, Hungary might find it necessary to assume the duty of her own defense independently of Austria.

Condition of Our Navy

Additional testimony concerning the American navy has been heard by the House Committee on Naval Affairs. Commander Stirling, at the head of the Atlantic flotilla of submarines, said that at the time of the recent maneuvers only one of the seventeen could be submerged. The five at the Panama Canal are said to be in good condition now. No United States battleship afloat has the modern defenses against submarine attack below the water line armor belt. Secretary Daniels said that tests completed ten days ago had shown that Alaska coal from the Matanuska field was of good quality for naval use. Last year's experiments proved that coal from the Bering field was not suitable. Assistant Secretary Roosevelt testified that 30,000 additional men would be required for the navy in case of war, and that it would take from two months to a year to put the reserve ships in shape for fighting service.

Admiral Fiske thought that the navy could not be prepared to make efficient warfare against the navy of a certain Power (meaning Germany) in less than from three to five years. We have only one mine-laying vessel and should have six. We need a general staff. There is lack of organization; we are deficient in gunnery; plans of campaign have not been prepared; and we are far behind in mines and aircraft. He frequently exprest great admiration for the German navy.

Supplies for the Armies

Our exports continue to grow, mainly on account of the shipment of war supplies. November's total, $205,766,424, was greater than October's by $10,500,000, and the excess of exports over imports rose from $57,000,000 to $79,000,000. Many orders from the nations at war are reported, in addition to those already mentioned in these pages. There are new buyers. A commission from Rumania has arrived, with authority to expend $10,000,000. Large purchases for Greece have been made, and exports to that country have been greatly increased. It is said in London that France has ordered 150,000 American horses. The new orders include large quantities of all-wool khaki, $500,000 worth of knapsacks (St. Louis), and $6,000,000 worth of auto trucks. A firm in New York has undertaken to make $3,000,000 worth of uniforms in ten weeks, and an order for $1,000,000 worth has been placed in Brooklyn. Cotton duck for tents and stretchers is in demand. More than 1,000,000 blankets have been shipped. A check for $3,500,000 has been received at New Orleans to pay for mules, and reports from Georgia say that nearly all the serviceable mules in that state have been purchased. At Pittsburgh there are large orders for steel rails, car wheels (90,000) and barbed wire. It is said that orders for 1,000,000 tons of steel products for European delivery have been placed there since November 1. An agent has arrived at New York from Russia, empowered, he says, to spend $10,000,000 for machinery and tools.

German secret service agents, it is asserted, have ascertained that orders, as follows, have been placed here by England, France and Russia: For 1,100,000 rifles or carbines, 300,000,000 cartridges, 15,000,000 pounds of powder, 50,000 revolvers, 1500 machine guns, 200 armored motor cars, 900 six-inch guns, 40 nine-inch guns, many aeroplanes, and 4,000,000 aerial arrows. The manufacturers, it is said, are the Winchester, Remington and Union Companies, the Du Pont Powder Company, and the Bethlehem Steel Company. This statement may not be trustworthy. In it $12,000,000 worth of artillery ammunition is assigned

An Embargo Movement

The manufacture here of submarines for the warring nations has been prevented by President Wilson, and there is a movement in Congress for legislation forbidding the sale and shipment to them of supplies of any kind. Charles M. Schwab, of the Bethlehem Steel Company, had an order from the British Government for twenty submarines. He was advised that the construction of these boats and the delivery of them, if the parts should be shipped to be assembled in Canada or England, would be no violation of neutrality. But the President's views were at variance with this advice, and when they were made known to Mr. Schwab the latter promised that he would build no submarines for use during the war. It is said that the price was to be $7,000,000. Five large guns recently shipped at Victoria, B. C., for delivery to the Russian Government, are said to have been made at his mills.

In the Senate, Mr. Hitchcock, of Nebraska, has introduced a bill making it unlawful and a breach of neutrality for any American citizen, firm or corporation to sell arms, ammunition, artillery or explosives to a country at war with a country with which we are at peace. The proposed penalty is a fine of $100,000 or imprisonment for three years. He also asks for an inquiry about the orders recently placed. Senator Works has a bill forbidding the sale and shipment of food, clothing, horses or supplies of any kind to a belligerent. Similar bills have been introduced and are supported in the House by Representatives Bartholdt, of Missouri; Vollmer, of Iowa, and Lobeck, of Nebraska. These men are of the German race. In answer to the published charge that they are acting for the German Government and under the direction of the German Ambassador, they have made speeches of defense in the House, asserting their loyalty to the American flag.

Mr. Bartholdt said it was plain that Germany could not be conquered, and that the United States could end the war by withholding supplies from the allies. Similar assertions were made by George Sylvester Viereck, editor of *The Fatherland,* a German weekly, who laid before Secretary Bryan and Senator Hitchcock the German secret service agents' list of war supply orders and declared that by preventing the sale of the arms, ammunition, etc., the United States could end the war in "sixty days or less." This means, it is said by prominent Americans in reply, that we should help Germany to defeat the Allies in sixty days. They hold that it would be a breach of neutrality to make, by new legislation, a change of practise in favor of one belligerent and to the disadvantage of another. The British Government has been assured that the embargo bills were not introduced at the suggestion of the Administration. It is not expected at Washington that they will ever come back to either house from the committees to which they were referred.

Villa, Zapata and Carranza

Many prominent Mexicans have been put to death at the capital since Zapata and Villa took possession of it. One of them was General Fuentes, whose son is the husband of one of Huerta's daughters. The number of those executed is said to exceed 100. When Secretary Bryan asked that clemency be shown to those arrested for political offenses, President Gutierrez replied that the men had not been killed in obedience to his orders. He issued a decree forbidding summary executions and directed that trials should be held before military councils. At Vera Cruz, Carranza has issued a decree ordering that all persons who were formerly in Huerta's army and are now found in the forces of Villa and Zapata shall be put to death without a court martial. Loot worth millions of dollars which was taken by Carranza's men at the capital has been restored by Villa and Zapata.

Under the leadership of General

RUSSIAN ARTILLERY IN ACTION

Few pictures come from the huge forces which are alternately receding and advancing before Warsaw. This shows a battery in the hills on the Vistula-Warta line

Angeles (Villa's friend and candidate for the Presidency), Puebla, the most important city between the capital and Vera Cruz, has been captured, with 2000 prisoners. Carranza's fleeing soldiers burned much railroad property and set fire to oil tanks. Villa's army entered Guadalajara on the 18th. Before retreating from the city, Carranza's forces sacked it. They left behind them ten carloads of ammunition. Angeles is moving toward Vera Cruz. Reports from that city say that Carranza, deserted by several of his military commanders, has been living in the lighthouse building, and that a gunboat, with steam up, lies near, ready to carry him away. He has issued paper currency having a face value of several millions, and is selling imported goods stored in the warehouses. General Lucio Blanco has gone over to Villa and the convention. Gutierrez has made him Secretary of the Interior. In four southern states the followers of Zapata are confiscating and distributing land, with the consent, it is said, of Gutierrez and Villa.

At the capital, where there are many war orphans, Villa recently selected sixty, whom he sent to Chihuahua, to be cared for and educated at his expense. For eight months he has supported sixteen orphaned boys in schools there or in the United States. Many orphaned girls have been in the care of his wife.

The Situation at Naco

At the end of the week, the problem at Naco, on the Arizona border, had not been solved. In response to the notes from our Government, both Gutierrez and Carranza said that their followers had been ordered to stop firing across the boundary, but Carranza added that an attempt by our army to check the firing by force would be regarded as an unfriendly act, and that the Americans who have been killed or wounded probably suffered on account of "imprudent curiosity." Apparently he did not know that hundreds of houses in the Arizona town have been scarred by bullets, and that several persons have been wounded while standing in front of the American custom house or post office. The report that a sharp ultimatum was sent on the 16th by General Bliss to Maytorena and Hill (the two commanders) has been denied by Secretary Garrison.

Reinforcements have been sent to General Bliss, who now has six batteries of artillery and 4170 men. The artillery commands the trenches and camps of both factions. Maytorena (besieging Naco in the interest of Villa and the convention) consented to refrain from shooting across, unless attack should compel him to do so. Many of his soldiers are Yaqui Indians, whom he does not easily control, and he himself has been called a free lance. Villa has sought to restrain him. Our Government has sent to Naco General Hugh L. Scott, Chief of Staff, on a mission of conciliation. General Scott is admired and respected by Villa. He is acquainted with the leaders in both factions and has been notably successful in mediation efforts of this kind. There are about 5500 Mexicans at Naco, commanded by Maytorena and Hill.

THE HUNDRED YEARS OF PEACE

TO THE PEOPLE OF THE UNITED STATES:

One hundred years ago today there was signed at Ghent, in Flanders, the treaty of peace between Great Britain and the United States, which marked the close of what has happily proved to be the last war between English-speaking peoples of the earth. Today the city of Ghent is at the very center of the terrible conflict that rages in Europe. The American Peace Centenary Committee cannot permit this anniversary to pass without inviting the thoughtful attention of their fellow citizens to the contrast presented by the century-long period of peace which English-speaking peoples have enjoyed among themselves on the one hand, and the appalling destruction of life, property and great monuments of civilization which the European war involves on the other. It had been our confident hope that the example which the English-speaking peoples have set in their relations with each other would be followed by the other great nations of the earth in their several international relations. It had been our earnest desire that the spirit of peaceful and friendly coöperation which each of these peoples manifests toward the people of the United States would also mark their dealings with one another. Unfortunately this was not to be, and we are sorrowfully called upon to mark our centenary celebration in the midst of the most terrible and destructive war that history records.

Even at such a time, we must avow once more our emphatic faith in the supremacy of justice over force, of law over might. We rejoice in the peaceful relations of a hundred years among all English-speaking peoples, and particularly in the undefended and unfortified line, nearly four thousand miles in length, which divides the territory of the United States from that of the Dominion of Canada. The mutual trust, forbearance and helpfulness which make that undefended boundary a link and not a barrier between two peoples, we offer as an example to our warring brothers across the sea.

It had been our purpose, when our Committee was organized in 1910, to plan for a great celebration of the centenary anniversary by various methods which have now, because of the terrible war which is still convulsing Europe and disturbing the whole world, become impracticable until the close of the conflict.

But we appeal to the people in all the states and to all civic bodies to mark this notable anniversary by suitable exercizes in the churches of all denominations on the 14th of February, the date agreed upon for that purpose with our associate, the Canadian Committee; by formal addresses at the capitals of the respective states on the 17th and 18th of February, the dates of the ratification and proclamation of the Treaty; and also by appropriate exercizes in all the schools on the 22nd day of February, or on such later date or dates in the spring of 1915 as may be locally deemed preferable, by which all the children of America should be instructed on the significance of this great event, and of the happy prospect which is assured to us, in spite of this horrible war, of another century of continued peace between all the English-speaking peoples of the world.

HOW TOMMY ATKINS GETS HIS BREAKFAST

BY ALFRED STEAD

Mr. Stead has been at the front for some months as the special correspondent of the London "Daily Express." This is the second of three articles written especially for The Independent. — THE EDITOR.

IMAGINE a daily picnic for well over two hundred thousand men, with the certainty that there will soon be another equal number and another to provide for! How well we know the difficulties of competently organizing even a small amateur picnic in the woods close to home. The salt or the pepper or the butter is always forgotten! And if the day goes off well, without too many omissions being discovered, we are proud of the "successful picnic" and talk about it.

The British army in France is fed, clothed, supplied with everything from toothbrushes to nine-inch howitzers or naval guns with a clockwork regularity; there is no salt missing. That is one of the secrets of the readiness of the British forces to meet all sorts of danger and fatigue — their commissariat and supply has never been found wanting.

Think what this means for a moment. Running a self-contained army hundreds of miles from home, thinking out days and weeks and months in advance every possible need of hundreds of thousands of men, of thousands of horses. For the horses are also fed with fodder from home —a fact which has conduced much to their well-being.

The life blood of the British forces in France flows evenly, regularly and quietly, from the great depots in England to the firing line. Officers and men of the Army Service Corps, those who are responsible for the lines of communication, the drivers of the motor-lorries, all these deserve well of the country. The army knows it, and altho theirs is not the fierce glare of the bayonet charge or the trenches, they have danger enough and work enough to win any war medal.

Right across France stretches the line of British supply, and this vein of British war blood never ceases pulsating day and night. Always supplies are going forward, never less than three full trains a day. These trains are in charge of two officers, on the locomotive are two Tommy Atkins with rifles, not for the enemy, but to fight red tape, which would cut off a locomotive because some station or other has always represented the end of its beat.

These trains go up to the nearest rail head and hand over the stores to the motor lorry trains. Great lines of these old motor chassis mounted with a serviceable lorry body are to be met with on all the roads of France. What experiences they have been thru, what stories they will be able to tell their companions of the garage who are still running about the London streets!

These lorry trains are also self-sufficient, with their traveling workshops and repair lorry. Many of those in charge are skilled testers and drivers from the large motor manufacturers in our country. I remember running across one of the highest mechanicians of the Sunbeam Company in a little village just back of the Aisne—very fit, very proud of a letter from his company assuring him of his job when he should come back. And so he blithely loaded up a cargo of sixty-pounder shells and dashed back into a very inferno of shell fire to deliver his precious load right up to the battery.

Motor transport service is not all running along picturesque French roads, smoking, joy-riding. It is fraught with risks all the time. Convoys have always been one of the favorite spots to strike at since the war begun—and the motor trains, altho more speedy, are more noisy. Also, they are defended only by a relatively small number of men.

They have already one brilliant feat to their credit. A train of twenty lorries, each laden with five tons of food and stores, ran suddenly into a band of five hundred German cavalry and was called upon to surrender. The German officer on being refused was allowed by them fifty yards grace, and then the fight began. The British officer in charge took the wheel of the first lorry and went full speed ahead at the enemy, the others followed. There has been nothing like it since Hannibal's elephants charged the Roman legions. They went thru and over the Uhlans and escaped with small loss—and Tommy in the trenches had his breakfast next morning.

Going as they do back of the army, thru country full of patrols and stragglers of the enemy, the motor

RUSHING A SUPPLY TRAIN

"Tommy eats a lot; one transport officer told me he thought they generally managed to secure two days' rations in one"

Paul Thompson

THE DESPATCH-RIDER OF TO-DAY'S WAR

"Perhaps the most exciting work of the A. S. C. is that which falls on their motor cyclists. . . . But they pay their toll. . . . Many disappear—ride off and are never heard of again"

lorries are always apt to be surprized and captured. Nor is their task over when they reach the front. They form a conspicuous mark for the enemy's shell fire and yet go up to the batteries with shells or to the trenches with ammunition or food, as calmly as they used in olden days to plunge into the traffic whirlpool at the Bank. And during all the campaign these ex-bus and taxi drivers have never shown the white feather. tho many of them went straight from the streets of London to heavy fire.

One story is told by all A. S. C. (Army Service Corps) men when together. During the retreat from Mons it was necessary once for the motors to leave hurriedly. Some men had to go on foot, among them an ex-taxi man, who was much excited.

"I must lighten my load," he said, at a time when men were throwing away great coats in order to march lighter, and looking thru his kit, regretful of losing anything, he threw away his toothbrush! And now the toothbrush has become famous thruout all the A. S. C. branch. But really they are wonderful and so cheerful as they plow along day and night, fine or foul weather. For Tommy eats a lot; one transport officer told me he thought they generally managed to secure two days' rations in one, unless under heavy fire—tinned rations and fresh meat. In any case, the calculation made of their needs was based on one and a half day's rations each day. And just how efficient this side of the army is may be judged from the notice to furnish additional rations for 50,000 French troops!

As one Canadian driver said: "The British army is *some* Whiteley"—the universal providers to the army, who are always where they are wanted, and nearly always have what is wanted somewhere on their lorry or train.

Perhaps the most exciting work of the A. S. C. is that which falls on their motor cyclists. Indeed, these men, carrying dispatches, are the most useful of all. They go anywhere speedily, and pass many dangers unscathed. But they pay their toll as well. Many disappear—ride off and never are heard of again.

The motor cyclists of the army are the land aeroplanes. They go right up to the enemy's lines, they have their bicycles blown to pieces under them, but they "get there."

One young university undergraduate rode up in the face of heavy fire from German guns to ascertain how accurate was the British range, found it was some hundred yards short, returned and gave his information, enabling a German battery to be put out of action—and neither he nor his bicycle was touched. All he said about it was that it was "quite exciting, and wasn't it a pity the poor bike was done in by a shell the next day." But motor-cycle riders are becoming hardened to the loss of machines. As one of them put it, "I have a new Triumph nearly every day."

There is excitement enough for these dispatch riders, but in a lonely way. There are no comrades by their side to see their courage; they have to do and die alone. Nothing spectacular—but all the braver for that.

Take a typical case—that of young Pearson, the third son of Lord Cowdray. He was carrying dispatches to headquarters from Paris, was chased by two Uhlans, ran plump into fifty more, was taken prisoner, put in the firing line, made his escape, and was shot while doing so. And such cases are happening every day. Nobody talks of them because nobody thinks them anything but ordinary and to be expected.

Nor are these modest heroes emotional; the most I have ever heard one say was when he was describing how his engine stopped when under fire: "You have no idea how thumby your fingers are when fixing a bike under shrapnel fire."

The people of Britain, nay of the whole empire, should understand the

BUILDING OVENS AT A NEW CAMP

"In a few hours those responsible transform any town or village or other place by their own efforts into something adequately fitted for the work or use it is destined for"

magnitude of the work of running an army. With Kitchener at the head it goes, for he knows how to choose his men, and gets things done.

The other day he wanted 100,000 greatcoats.

The reply was, "In a month."

"I want them Saturday week."

"But they will cost much more," objected his subordinate.

"Doesn't matter what they cost; the lives of 100,000 soldiers are worth more than pounds, shillings and pence." And he got them, too, did Kitchener, as those hundred thousand men can testify. But just think of it! When the troops coming from all the quarters of the globe disembark, they find ready for them their food, their ammunition and material, all ready on the trains waiting for them. The work of the supply department is without precedent in the pages of history. It is a business organization with imagination, with elasticity.

In a few hours those responsible transform any town or village or other place by their own efforts into something adequately fitted for the work or use it is destined for. On all sides and in profusion, electric light, telephone, telegraph, are installed. Everything needed is there and nothing is asked from the country. Nobody there in France would be astonished to learn of any marvels—flower gardens in the Sahara would, they are convinced, be produced like the magic mango trees of the Indian conjurer were they a necessity for the British army.

To aid the overworked and understaffed French railways, many of whose employees are in the ranks, trained railway men have come from England, bridge builders, permanent way men, everything. If need be, locomotives and trains would be brought as well.

The postal service is also in their hands and works well if somewhat slowly. Motor vans and motor cycles with side cars carry the letters of the soldiers backward and forward.

And everything supplied is British if possible. The whole army is filled with the desire to boycott the produce of Germany. In a shop in a small French town I encountered three privates and a sergeant making purchases. In their weak French they had some difficulty in making their purchases. But they examined every article carefully and always repeated a few sentences which they thought were French. As nobody could understand it, I served as interpreter, and this is what they had learned by heart in French:

"I will pay for French articles, I will pay for British articles, I will *not* pay for German articles."

The great picnic is not dependent upon German goods and it has never yet run short. As one of the supply staff said:

"If 200,000 British men can do without German goods, why cannot 50,000,000 of British people?"

The work of the earthworm is a lowly one, but vital for the soil. The work of the military earthworms, bringing to the service and surface of war the needed supplies, is without price. For they never forget the salt.

RAIDING THE ENGLISH COAST

BY PARK BENJAMIN

THE INDEPENDENT'S NAVAL EXPERT

THERE is nothing of the unexpected in the raid of the German cruisers upon Whitby, Hartlepool and Scarborough, all English coast towns about 350 miles from the German base at Heligoland. It has been clear from the beginning that just as soon as the winter brought bad weather which would make it difficult for the blockading fleet to keep the sea and fogs which would screen all movements, the faster German ships would attempt to harry the English shore and to escape into the Atlantic in order to stop English commerce, cut off the transatlantic food and ammunition supply and incidentally prevent the further transport of troops from Canada to England.

The British public now awakens from its serene confidence that its North Sea fleet is able to bottle all of the German ships. In days gone by the "wooden walls of England" never failed to protect her soil from invasion. It is hardly possible to realize the shock which every Englishman must feel on the discovery that her steel walls of today have failed to do so. Not long ago a single German submarine entered the harbor of Deal and destroyed a vessel therein, small flotillas of submarines have attempted to pass the mines of other harbors; and surface ships of inconsiderable size have, from time to time, appeared off Yarmouth and other points on the English coast. But all this is very different from a concerted attack upon three towns made by seven or eight cruisers, including some only less powerful than battleships and exceeding them in speed. That large vessels such as these and in such numbers could elude the blockading squadrons and encounter nothing but a few destroyers easily brushed aside, that they could post themselves a mile from the beach and stay there long enough to cause wholesale destruction of life and property, shows that something is wrong either in the disposition of the British fleet or in the degree of watchfulness that it maintains. The disquietude attendant upon this state of affairs is not to be dispelled by soothing official outgivings in the newspapers. Fogs and storms are common in the North Sea in winter and these occurrences to blockading vessels are always signals for increased vigilance. If under such cover the German cruisers can elude the British capital ships there is no safety for the English coast or for North Atlantic commerce. No blow can be struck more dangerous to Great Britain than that which cuts off her supplies from this side of the ocean.

None of the recently bombarded towns were fortified in any reasonable acceptation of the term. An obsolete battery at Scarborough and a little fort at Hartlepool do not bring them within that category. The attack was simply cross-raiding—or "cross-ravaging," as it is sometimes termed—a practise abandoned centuries ago as destitute of any military value, even when the objective points are fortified, unless the attacking power already has command of the sea and the expedition includes troops sufficient to occupy the places after their reduction. As neither condition existed in the present instance, the raid is merely the application of torture to harass and irritate the invaded country. It is bad generalship even as against fortifications when they are not to be occupied—but as against helpless settlements, when the only consequence is the killing of non-combatants and the destruction of non-military structures, it is savage and not civilized warfare.

But there is something attractive about it to some people—as there is also about the practise of scalping. Now we, for instance, could not re-

Underwood & Underwood Thompson

WHAT THE NORTH SEA IS WAITING FOR—A BRITISH BROADSIDE (H. M. S. "COLOSSUS")

frain from sending a peripatetic museum of marine freaks to bombard San Juan, Porto Rico, without the slightest prospect of military gain, and even of some loss since we were then shuddering lest Admiral Cervera's fleet, of the whereabouts of which we were totally ignorant, should attack the bath-houses at Nahant and chase us inland from the New England coast say as far as Worcester, Massachusetts. We also wanted to shell Havana.

The nearest parallel to the present German onslaught is the destruction of the New England town of Falmouth by British warships in October, 1775. Downing Street, says the most recent British historian of the American Revolution, directed that the rebels should be annoyed by "sudden and unexpected attacks on the seaboard towns during the winter." This was based on the thoughtful assurance of George III to Lord North that His Majesty would concur "in any plan for distressing the Americans." Three quarters of the town was laid in ashes, women and children killed, and in brief the same atrocity was visited by George III upon our forefathers that one of George the Third's great-great-grandsons is now engaged in inflicting upon another of George the Third's great-great-grandsons, to the supreme satisfaction of the people enjoying the rule of the one and the corresponding intense disgust of the people enjoying the rule of the other.

What the ancestor did to us Washington denounced as "savage cruelty" and "a new exertion of despotic barbarity." It was this very Falmouth outrage—together with the buying of Germans by that ancestor which destroyed the last vestige of our loyalty to Great Britain and ensured the Declaration of Independence.

But it was no more of an atrocity for the Germans to bombard Scarborough than for the English to bombard Ostend or any other part of the unfortified Belgian coast. The justification in both cases is the presence of the enemy's troops in the place attacked.

Viewed in any other aspect than that of cross raiding, the German attack seems barren of results. It did not create any diversion of British blockading ships from their assigned posts, or beguile the British dreadnoughts behind Scotland to come into the North Sea and string out in open lines for the benefit of German submarines. It has simply enraged the British public and increased recruiting.

The singular British censorship which one day is all stony reticence and the next "a torrent of impulsive unbosoming," renders criticism of the measures adopted by the admiralty somewhat difficult; but none the less there have been many occurrences which on their face suggest vacillation, inconsistency and even negligence. According to German official outgivings, the British squadron which overcame the German ships which a month earlier had destroyed Admiral Cradock's vessels included the battle-cruisers "Inflexible" and "Invincible," the battleship "Canopus," the armored cruisers "Carnarvon," "Cornwall" and "Kent," and the second class cruisers "Glasgow" and "Bristol." They had no less than twenty 12-inch guns, besides four of 7½-inch caliber, and thirty-eight of 6-inch. As compared with the German squadron of but two armored, and three small third class cruisers, possessing but sixteen 8-inch guns, six 6-inch guns and thirty-two 4-inch guns, such a force was overwhelming in gun-power alone. Except the "Dresden" there was no German ship capable at best of making over twenty-four knots. The two powerful English battle-cruisers could both make twenty-six. The speed of the "Bristol" was closely that of the "Dresden," and that of the "Carnarvon" and "Cornwall" but slightly below that of the "Gneisenau" and "Scharnhorst." Knowing precisely what the German power in

the Pacific was, the Admiralty consigned the unfortunate Cradock with his far inferior ships to certain destruction, and attempted to justify its course amid the ensuing storm of condemnation by weakly alleging that it had delayed sending the "Canopus" to help him until too late; and this in the face of the fact that it knew perfectly well how long it would take an eighteen-knot ship to go from the North Atlantic to the South Pacific. It also insisted that it was inexpedient to detach any powerful squadron from the blockading fleet in the North Sea. Yet, altho the conditions in the North Sea had not changed at all, it was able within a very few weeks after Cradock's defeat to despatch post haste the above-named great force to a distance of seven or eight thousand miles. Owners of British merchant-vessels in the Southern Pacific and their underwriters are, of course, jubilant over Admiral Sturdee's victory. With the "Cormoran" interned in Guam, the "Geier" in Honolulu, and the "Königsberg" in some African Bay, there remains only the "Karlsruhe" in the South Atlantic, and two converted cruisers in the Indian Ocean. These free ships can maintain themselves but for a very limited period, so that at least until other German cruisers manage to escape from the North Sea, the oceans are practically clear.

From a naval point of view the action off the Falkland Islands involves no strategy and much accident. The British squadron, short of coal, stopped at the islands to get some. The German squadron went there to destroy a telegraph station. The German scout sent ahead to reconnoiter mistakenly reported but two British cruisers in port. When it was too late to retreat Admiral von Spee discovered the tremendous odds against him. He went down with his men at their stations as for drill. Even the smaller and totally outclassed German cruisers grimly refused to surrender and the non-combatant transports accompanying them did the same. The British ships made targets of all of them as they were overtaken in the chase. The "Dresden" managed to escape and found safety in a Chilean harbor. The encounter was accidental and not brought about by the British. Despite the amazing marksmanship exhibited by the "Scharnhorst" and "Gneisenau" in the fight with Cradock, the British casualties in the later action were inconsiderable—an obvious consequence of the smothering fire and greater range of the far heavier armament of Admiral Sturdee's ships. His victory was a foregone conclusion from the moment the Germans walked into the trap which he did not set. It is marred by the escape of the "Dresden." "If we had taken," says Nelson, "ten ships out of the enemy's eleven and let the eleventh escape, being able to take her, I could never call such a good day."

The recent attempts of German submarines to traverse mine fields on the English coast are obviously experimental, since no vessels of importance were in the harbors sought to be entered. The deductions which the Germans have drawn from these essays will in all probability show themselves in future operations by the exceptionally large and powerful submarines which it is reported they are pushing to completion. It is something of the irony of fate that the successful attack of a British submarine upon an ancient Turkish cruiser in the Dardanelles should have provided the Germans with the most crucial test of submarine assault in the face of great obstacles. While running on the surface the British boat past ten forts unscathed, then dove under five lines of mines, stayed under water nine hours and finally got her prey. This achievement of Lieut. Commander Norman Holbrook, R. N., commanding His Majesty's Submarine B-11, is far and away the most daring and skilful of any known to have been accomplished by any naval officer during the war.

The captain of the "Dresden" reports that after reaching security in Punta Arenas he learned of the outcome of the battle by reading British wireless messages which his instruments picked up from the ether. This remarkable ability of one combatant to read the most secret communications of the other recalls an earlier and similar happening of even more serious character. At the beginning of the war, the German battle-cruiser "Goeben" was chased into Messina by a powerful British squadron. When her destruction seemed inevitable, even to her own captain, the British Admiral calmly permitted her to escape. For that he was brought before a court-martial, and there he appears to have established the astonishing defense that he acted under orders of the Admiralty received by wireless telegraph commanding him to do what he did. These orders he showed bore all the secret marks of authenticity. Nevertheless it was proved that no such orders had ever been sent him, and that they were the work of German spies. To the suggestion that it was extremely unlikely that the Admiralty would ever issue such orders, the defendant replied in substance that he supposed the Admiralty knew what it was about. Whereupon he was acquitted.

If anything is kept secret by every government which has a navy, it is the means by which telegraphic orders are protected and verified. This acquittal seems to show that it was possible for some one unknown and untraceable to find out the secret system of the British Admiralty so minutely as not only to be able to mislead an experienced commander in the field, but so completely to deceive him that, in the present case, he performed an act which, he knew, if not fully justified might subject him to the death penalty. If this sort of thing is to continue, it may become a question who is directing the British fleet, the British Admiralty or the German?

There are some lessons here to be heeded—An officer whose sense of subordination is so exaggerated as to lead him to refuse attack upon an enemy then and there in his immediate danger, no matter what orders he receives from his government, is of more use in a hayfield than on a quarter deck. An officer who does not know that there are times when disobedience of orders becomes the highest public duty and is not able to recognize those times, and ready to stake his life on the correctness of his recognition, is in the long run, rather more dangerous to the country he serves, than to the one which he is fighting. Any navy whose telegraphic communications can be forged or read by any other navy is at the mercy of that other navy—and it is of much more importance to stop that state of affairs than to chase predatory cruisers.

The indications are multiplying that a terrorizing raid on the British coast may be used to mask an attempt by German ships—probably also screened by submarines and destroyers—to get into the Atlantic Ocean. The object is less commerce destruction than the cutting off of the food supply to the British Islands, and of the enormous quantities of guns and ammunition now being shipped by neutral American manufacturers to the Allies.

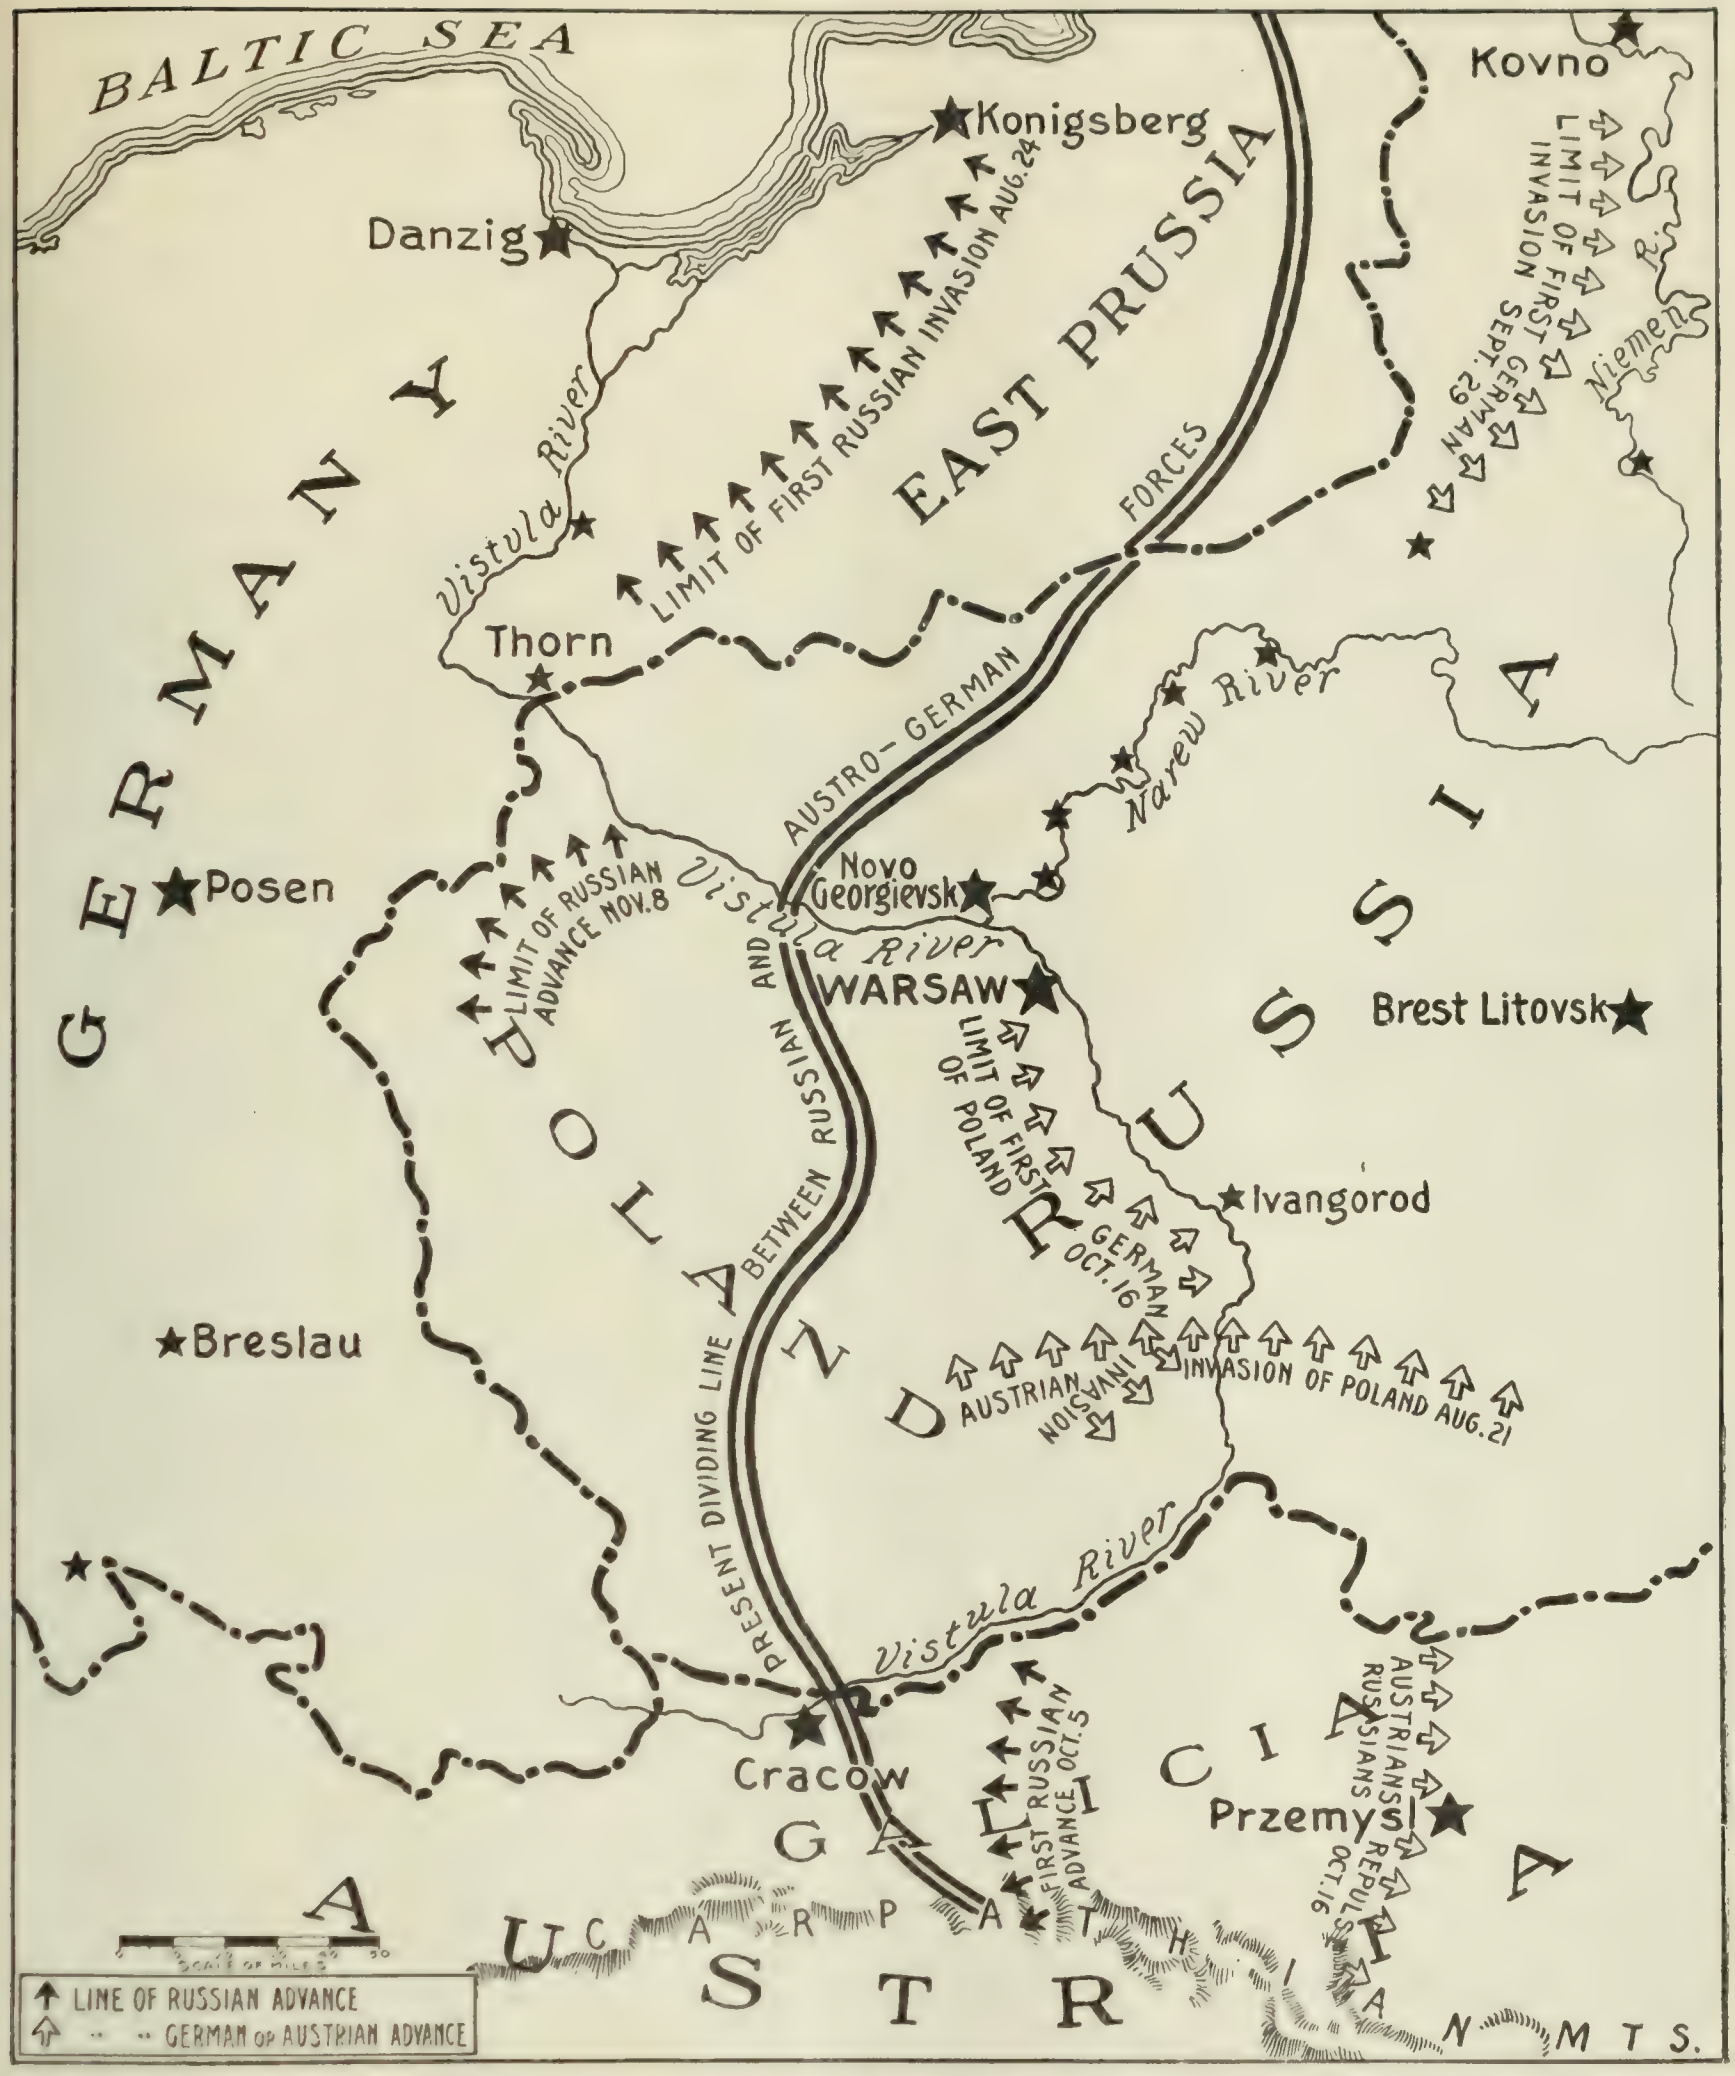
It is now reported that the German battle cruiser "Von der Tann" successfully eluded the British fleet in the North Sea about two weeks ago and is now at large in the ocean. Great doubt is also exprest that the ships which bombarded the English towns have returned to the German bases, and it is rumored that they also have escaped from the North Sea.

New York City

THE VALLEY OF THE VISTULA

FIVE MONTHS OF FIGHTING ON THE RUSSIAN FRONTIER

THE eastern theater of war is a strip of country four hundred miles long and two hundred and fifty miles wide, bounded on the northern end by the Baltic Sea, bounded on the southern end by the Carpathian Mountains and bounded on the eastern and western sides by —nothing at all. Therein lies the explanation of the amazing fluctuations of fortune, the alternate advance and retreat of vast armies, which have distinguished the campaign in this field from that in the west. A row of striped stakes and sentry boxes is no better than a scrap of paper for keeping out an enemy. Russia is separated from Germany and Austria-Hungary by an imaginary line as irregular as tho drawn upon the map by a palsied hand, and only for a small fraction of its thousand mile course does it chance to follow a river or other natural obstacle that might serve as a defensible frontier. This erratic boundary cuts across racial, linguistic, religious and economic affiliations, for it is not the product of anybody's planning, but grew out of the accidents of history, being the resultant of a thousand years of wars of conquest, court bargains, conference contrivances and matrimonial alliances and inheritance. The Great War, however it may come out, will effect a revision of this part of the map of Europe and we may confidently hope that it will be for the better since it can hardly be made worse. One consequence of this artificial delimitation of frontiers has been to add to the confusion and distress of the conflict. We see Poles and Jews in both armies fighting against those of their own race, altho neither has any reason to love the Russian or the German Government. The Russians have devastated Galicia, which they hope to annex. The Germans have destroyed with their shells the factories of Lodz, which has been built up from five thousand to five hundred thousand population in the course of a century largely thru German enterprise.



Thru the middle of this oblong battleground meanders the river Vistula from the mountains on the south to the sea on the north. Now the American tourist is not apt to be so well acquainted with the Vistula as he is with the Thames or the Tiber, but he has already a pretty good idea of what it is like if he has obeyed the injunction of our railroad literature to "See America First." Any one who knows the Mississippi is acquainted with the Vistula, this wide and wandering river, uneasy in its bed, shifting from one side to the other or getting out of it altogether, cutting down banks and throwing up sandbars as tho on purpose to confuse the pilots of the shallow draft steamboats.

As it runs by Cracow the Vistula is less than seven hundred feet above sea level and it has about seven hundred miles to go before it empties into the Baltic, so it can take its time and do a good bit of travel on the side. Ordinarily it confines itself to a width of half a mile to a mile as it passes thru Poland, but when the March freshets come the river will spread out over the surrounding country in the generous way common to the Mississippi and its tributaries. As it passes thru West Prussia and approaches its goal, the Gulf of Danzig, it divides into a delta of tangled branches and shallow lagoons which require constant dredging to keep them from being choked with silt.

Such a river would be better than the Rhine as a defensive frontier, but unfortunately for that purpose all three countries lie on both sides of it. The Vistula originates in Austria, flows thru Russian Poland and then crosses Prussia. The situation is much as it would be in America if—as some wild and wooly orators have urged—the western states had seceded and set up a republic independent of the East. In such an event the Mississippi might form a natural boundary between the two sections, but it would be very dangerous to peace and safety if the East possest Missouri and Iowa and the West held Wisconsin and Tennessee. Now substitute Russian Poland for Missouri and Iowa, East Prussia for Wisconsin and Galicia for Tennessee and set the Mississippi to flowing northward like the Vistula and we have the strategical problem which is now worrying the heads of General von Hindenburg and Grand Duke Nicholas. The modern commander regards the battle as half won when he can turn the enemy's flank. For the first three months of the war in France the issue hinged on which should get around the seaward end of the long line of battle. But in the eastern theater each side had the other outflanked by two hundred miles before their troops had stepped off their own soil. The map shows Russian Poland like the prow of some great steamship pushing westward into the Austro-German sea. Or, to change the simile and the point of view, East Prussia and Galicia extend eastward like two gigantic arms to grasp Russian Poland.

Distances have been scaled down by modern methods of transportation so that this terrain of one hundred thousand square miles may be regarded as one great battlefield where every part is affected by what goes on anywhere in it. In August the Russians moved westward in East Prussia; they also moved westward in Galicia. When they were driven out of East Prussia in September the way was open for the Germans to advance upon Warsaw and the Austrians were able to move eastward and relieve the siege of Przemysl. When early in November the Russians drove the Germans out of Poland they again invaded East Prussia and advanced in Galicia almost to the gates of Cracow. Now we see the Germans in Poland approaching Warsaw for the second time and simultaneously the Russians before Cracow have retired. The object of each commander is to keep his lineup as straight as possible, for offside play is severely penalized in this game of war.

The rapidity of these movements shows how thoroly both sides had prepared for the present war. The German railroad system, being in the hands of the Prussian Government, has been developed with special reference to quick mobilization on both frontiers. A belt line of railroads runs all the way along the Russian border and about ten miles on the German side of it. On the Russian side there are no such conveniences for moving troops along the frontier. The four railroads of Poland simply run to Warsaw with cross connections only at Lodz, Lowicz and Skierniewice, which accounts for the hard-fought battles at these points. But this weakness in the Russian railroad system has been realized and as far as possible remedied. The last big loan made by France to her Slavic ally before the war carried with it the express stipulation that it should be used in part for the improvement of the railroad system of Poland so as to facilitate the attack on Germany. The strategic lines in this field were increased from six to eight, of which six were double tracked. These improvements enabled the Russians to mobilize completely within two weeks instead of the month which it was thought they might require, consequently the Germans had not time to get to Paris before they had to withdraw troops from France to meet the Russian invasion of East Prussia.

THE CAMPAIGNS IN THE VALLEY OF THE VISTULA

The above map shows the principal movements of the contending armies on the Russian frontier during the last five months. The arrow heads, black for the Russian and white for the Austro-German troops, indicate the direction of the movement and the farthest point attained The date given is the day on which the advance was checked, altho this cannot be definitely determined from the meager and conflicting accounts appearing in the press. The double line in the middle shows approximately the positions of the opposing forces during the last week in December. The fortified cities are represented by stars, the large stars standing for fortresses of the first class. It will be seen that all of the fighting so far has taken place between the fortified lines of defense which on the Russian side consists of the chain of forts along the Niemen, Narew and Vistula rivers from Kovno on the north to Ivangorod on the south. The German and Austrian fortresses form one great curve from Königsberg and Danzig on the Baltic by Thorn, Posen and Breslau around to Cracow and Przemysl in Galicia. The Russians began the war the first week in August by the simultaneous invasion of East Prussia and Galicia from the eastern frontier. In both fields they were successful. The weak German force left to guard East Prussia was driven back and the Russians reached Königsberg and Thorn. In Galicia they inflicted a terrible defeat on the Austrian army, captured Lemberg and besieged Przemysl. The Austrian army which had advanced northward into Poland during August on both sides of the Vistula thus found itself surrounded on three sides and narrowly escaped destruction by a precipitate retreat. During the last week in August the tide turned and General von Hindenburg drove the Russians out of East Poland and as far back as their line of defense on the Niemen. Here he was checked and next made a drive into the heart of Poland, but he was defeated and forced back to the German frontier. Quickly gathering his forces together he again advanced up the Vistula from Thorn and has now succeeded in coming within thirty miles of Warsaw

WORK AND EFFICIENCY

SECOND ARTICLE IN THE SERIES ON EFFICIENCY AND LIFE

BY EDWARD EARLE PURINTON

DIRECTOR OF THE INDEPENDENT EFFICIENCY SERVICE

WORK is the highway to happiness. There are other ways — health, wealth, pleasure, fame, friendship. But these are only byways; work is the highway. The one sure way to be happy is to learn to be happy in your work.

Now, two people may walk the same road, yet one find joy and the other find wo. A restless urchin, bent on raising trouble, scuffs up the dust of a country lane on a June morning; while a grown philosopher treads the shady path alongside, breathing in the fragrance of the meadow blooms, and refreshing his soul with a clean vision of the sun-swept horizon hills.

On the great thorofare of human work there are clouds of dust; where there should be the fine play of well-groomed muscle, the earnest gaze of well-directed mind, the deep breath of wholesome inspiration, the fragrant sense of congenial surroundings, the buoyant step of a mountain-high purpose. We have robbed work of the romance with which the Creator endowed the tilling of the first acre, the building of the first home. And to restore and maintain this energizing spirit of hope, joy and pride in the worker is the first and fundamental task of the efficiency expert. Your machine is second—your *man* is first.

A good business psychologist, entering the usual store, office or factory, chokes. He finds the air filled with clouds of moral dust—the dust of complaint, the specks of error, the sand of friction and dissension, the germs of envy, jealousy, greed, indifference. And to clear the mental machinery of employer and employees from this whirling volume of psychic debris is the duty of supreme necessity and supreme difficulty.

I am not talking theory—I am talking science. There are no costly, needless labor troubles — such as strikes and anarchistic rebellions—among the employees of the United States Steel Corporation. Why? Because this company, the largest in the world, has fixed in the minds and hearts of the workers the right kind of *feeling* toward the proprietor, toward the business, toward the future of the worker in relation to the business. The first essential in efficient work is good feeling; and lots of it.

I do not mean sentimentality, or effusiveness, or lax discipline. I mean just fine team work, based on mutual understanding, sympathy, confidence, purpose, coöperation of employer and employee.

Here is a case in point, showing how feeling underlies efficiency. A business man had a clerk who was jealous, suspicious, fault-finding, rough, and so "temperamental" that he couldn't stay on the same job more than half an hour. The employer went to a business psychologist, who advised thus: "Plan some day to have this clerk remain when the others have gone, without their knowing why he stays. Then take him into your confidence. Tell him some of your aims and a few of your difficulties. Show him how his loyalty, cheerfulness, enthusiasm, steadfastness, will help you and him and the business. Make him see you need his support, give him some special duty or responsibility, and let him report occasionally to you in person. Demonstrate to him how his work should be done—then assure him of larger work ahead. In short, treat him not as a slave in a treadmill, but as a younger brother."

The employer took the advice. In a few years this clerk became the most efficient worker in the place, a model of courtesy and cheer, a plow-horse for endurance, and the president's mainstay along various lines. The lazy or unruly employee makes the best worker, when you touch the right spring.

I emphasize this matter first, because it is most vital. We have now abroad a young army of efficiency engineers; who will set your desk near your base of supplies and arrange your tools to conserve your motions; who will teach your office boy how to fold circulars in one move instead of three; who will buy your materials with economy and dispatch; who will audit your books and save your postage stamps and do other laudable things. But the real expert is the rare one who will first show you how to handle your men—how to create in them loyalty, confidence, ambition, tact, initiative, will power, endurance, concentration. This is the vital issue.

Now let us be as cold as steel—as emotionless in method as we are exalted in purpose. A man who jokes or jollies or dreams or dawdles or grows angry in the office is no man, but a mollusk. If a clerk makes a mistake and the "boss" yells at him, the boss is more inefficient than the clerk. If your competitor calls you a liar, and you get mad and call him a liar, you are also a fool—besides being probably a liar for calling him a liar when he calls you a liar. If your debtor won't pay, and you brand him a thief, you lose both your money and his trade. If your typist (doing her best with your mangled dictation) seems slow, and you tell her she is slow, you aggravate her slowness. In short, to lose control of one's emotions during business hours means, in the long run, to lose dollars and cents.

Be earnest, but be calm, no matter what happens. I have seen a man learn to treble his day's work by systematically shutting out all feeling during office hours. What fatigues and annoys us is not our work, but the mental friction, nervous strain, muscular tension, emotional wear-and-tear, which we allow to accompany our work. A real man is always a machine while on the job—and never a machine at any other time. Recipe for Efficiency: Be a plodder by day and a poet by night. Do your planning, your dreaming, your resolving, when silence and solitude open the mind for great thoughts and purposes; then appear to the world just an ordinary business man, with nothing unique about you to rouse the neighbors' suspicions.

Now for some practical methods—which would apply to any ambitious man or woman, from the President of the United States to the lady who scrubs his floor.

Such a plan is wofully needed. When we begin to be civilized, in a

EFFICIENCY WORK SCHEME

(FOR AN AVERAGE OFFICE-BOY IN A SMALL CONCERN)

1. REGULAR *Daily duties for employer*	*2. OCCASIONAL* *Jobs irregular in time*	*3. PROFESSIONAL* *Opportunities for self-advancement*
Open office	Run errands	Decide on ultimate position in firm
Sweep, dust, ventilate	Answer telephone	Go after it
Sharpen pencils	Help other clerks	Study trade-papers and library books
Fill ink-wells	Announce visitors	Watch methods of "man higher up"
Sort mail	Operate mimeograph	Ask questions freely
Prepare memoranda	Seal and stamp letters	Work overtime
Take special orders from the chief	Fold circulars	Learn to eat for energy
Keep hands and clothes clean	Tie parcels	Go to night-school
Arrange desk for leaving	Serve as general handy man	Try to please customers
Close office		Make all employees like you
		Look as tho you enjoyed work
		Learn something new about the business every day

	Number Efficiency Marks					
	Actual	Ideal	Actual	Ideal	Actual	Ideal
B.....	.....	.....	.....	.....	.....	.....
Q.....	.....	.....	.....	.....	.....	.....
E.....	.....	.....	.....	.....	.....	.....

INSTRUCTIONS. Let B = best possible method of work, Q = quickest, E = easiest. Make out three-column list of your own, corresponding to office-boy's; put initial B, Q or E on margin of each task for which you *know* you are using the best, quickest, easiest methods, then count your B, Q and E totals, and compare actual number with ideal, which would be of course three initials for each task. Don't mark down B, Q or E unless some authority has told you the method you employ is best, quickest, easiest. You can't judge your own method—an expert must do it.

Having found which items remain to be checked with efficiency marks, how are you going to secure the efficiency which will warrant you in filling in the vacant spaces?

Copyright, 1914, by Edward Earle Purinton

thousand years or so, we shall look back and say pityingly of the fossil remains of the twentieth century: "The remarkable thing about these barbarian tribes was that they never really learned how to work. Consequently, their strange communities were infested with paupers, criminals, tramps, billionaires, policemen, reformers, and other abnormal creatures developed thru industrial ignorance."

Knowing how to work is knowing how to do and be everything worth while. For a national scheme of productive, satisfying labor would include a science of health, a science of education, a science of eugenics, a science of economics, a science of finance, a science of commerce, a science of service, a science of peace, a science of religion. We are beginning to apprehend the truth about labor. A New York high school teaches girls how to sew and cook and sweep and care for baby; a branch of the Young Men's Christian Association offers vocational training; a church has opened an employment bureau; a chain of domestic science clubs tells women how to conduct a household; in a few cities colleges are uniting with factories, to give students real shop work while studying theories in books. Praise be, for all this.

The application? Here it is.

Our first move toward industrial efficiency is to classify the duties, responsibilities and opportunities in our day's work. Take a large sheet of paper and rule off three columns. In the first column write down each thing you are expected to do, as your business every day. In the second column write down the occasional, special duties of your position, that are essential but irregular in time. Before approaching the last column it will be necessary to think deeply. For in this column should be listed all the means of improvement, advancement—such as reading, thinking, watching, planning, doing for yourself. This threefold efficiency scheme raised Lincoln from his cabin to the White House. It will help any man to grow.

Take the office boy, for example. We have most of us been thru the office boy stage, therefore can apply his case to our own—the principles being the same. His chart merely illustrates our method.

I am fully aware that an office boy who could indite and utilize the foregoing Scheme would be not an office boy, but a combination of Solomon, Darwin, Cæsar and Christopher Columbus. However, so many readers of these articles have asked for something to *do* for larger efficiency, that we can risk the strain on the hypothetical office boy.

It is important that the best, quickest and easiest methods of work be discovered and applied in the order here given. The best method will please your patron, client or customer; the quickest method will please your employer; the easiest method will please you. Do not try to please yourself first. The royal carriage to Achievement runs on Thoroness Avenue. I pity the man who has never learned the fun of doing things right. Irksomeness is shirksomeness.

The average worker wastes half his time and energy on trifles: partly because he has never classified and apportioned his daily duties; partly because he has never been taught his own possibilities for great things, never learned to find or make opportunities. The purpose in the Scheme is to make us do small things better—then have strength and leisure for great things.

The advantages of the Efficiency Work Scheme will not appear all at once. But if you prepare and follow

out the Scheme, you will note the benefits arising gradually. May we suggest how to proceed?

Column One. You know what you must accomplish every day, to satisfy the demands of your position. But to make sure, go to your employer, foreman or department chief and say to him: "Mr. Purinton tells me I can improve the quality and quantity of my work. May I investigate the subject and have you any advice to give?" If your chief comes to—having fainted with surprise—he will doubtless be glad to help you make out the list of regular daily activities and responsibilities. When Column One is finished, put the items on your morning schedule and all your strength into carrying them out early in the day, so as to leave an hour or two for self-improvement in the afternoon.

Column Two. In addition to the special odd jobs that fall to most of us, for which time must be allowed, there are little services to perform in easing up the toil of our associates who have not learned efficiency methods. Not only must the man of destiny be so eager for his own work that a team of wild horses couldn't hold him back—he must enjoy helping the business by lifting along his weaker brother. So put in your list of irregular duties—and believe me, this is most irregular—the duty and pleasure of looking around the place for extra jobs, to relieve your neighbor and improve the output of daily cheer. So far as possible, get the entire list of Columns One and Two in your mind—better on paper, to check off—the very first thing each morning. Such a habit clears and strengthens the mind, quickens the muscles and calms the nerves. We are vexed not with the care of toil, but with its chaos.

Column Three. The value of a position is not in its possession, but in its preparation. Only as it trains you for larger responsibility is it worth having. How is your work replete with opportunity? This may be made a fascinating study, and the most profitable in the world. When I finished college I could do but one thing to earn a living—and that one thing my health forbade! I spent a year investigating the science of industrial opportunity—and from that year to this, at least nine doors to professional advancement have stood wide open, all at the same time! Learn how your position may guarantee your promotion—and list the open doors in Column Three.

Now for the B, Q and E part of your Scheme. How are you to know the best, quickest and easiest methods? How secure the tools, implements and devices for economy of labor, time and money?

First. Go to your local newspaper office and ask to consult a copy of an American Newspaper Annual and Directory. Under the "Index to Class and Trade Publications" you should find your own business or profession. Turn to the list of magazines covering your field; send for a sample copy of those having largest circulation (enclosing say fifteen cents for each); take an evening or a Saturday off and go over the advertising pages, checking all items that appeal; write to the advertisers—then ponder the results. I know cases where ideas thus gained, entirely apart from sales, have revolutionized a business. You can be morally sure that somebody, somewhere, somehow, is doing your kind of work better than you are. Locate him in the editorial or advertising pages of your trade journal.

Second. Look up the libraries near you for books along the same line. There are circulating libraries which loan books on vital themes for a nominal sum. Get in touch.

Third. Form the habit of doing at least one of the exercises to be given in each article of this series—and resolve not to read the articles till you have an hour's leisure to work out the chart or test or table. The articles to follow, covering food and drink and dress and play and thought and cash and home, all bear directly on "Work and Efficiency." Each will suggest something for you to do—not merely a line of thought to look at and forget. Learn to read these articles with a notebook and pencil at hand, to make your own observations and plans while you read, then to act forthwith on such ideas as appeal to you. If you do this, a year from now you will be a different person.

The day is coming when the labor of man's body, the light of his mind, and the love of his heart, will be scientifically merged to make of his work a series of masterpieces. When that day comes, man will be efficient.

New York City

OH MOTHERS OF MANY

BY LOUISE DUNHAM GOLDSBERRY

Count o'er your brood, oh ye Mothers of Many—
One—two—and three—God! How they are dear!
Which will ye spare, then? All? Or not any?
One—two—and three—to the bullet and spear?

Why, foolish women! Get ye to your prayings—
Faster yet breed ye and bring to the birth!
Glut your fond hearts in their laughters and playings—
Splendidly rear them to fatten the earth!

Is't not for this ye plight ye to your matings?
Only for this that ye give yourselves, then?
Month unto month, that ye live the long waitings,
Bitter of travail to mother ye men?

One—two—and three—God! *How* they are precious!
These that ye once went road-mate for with death!
Babes that ye suckled—God! *How* they are precious—
Flesh of your flesh and live breath of your breath!

One—two—and three—not for this then ye bare them?
Not for the wastage of bullet and sword?
Not to make fallow the fields can ye share them?
Not to heap high up a king's ravish-hoard?

Strain ye your breasts Godward—Oh Mothers of Many—
Stretch ye your clamorous arms that He see;
Of them ye travailed for not any—*not any*—
Can ye spare from your count unto war's butchery!

Oh, count o'er your brood then, ye Mothers of Many—
One—two—and three—God! *How* they are dear!
Which will ye spare, then? All? Or not any?
One—two—and three—to the bullet and spear?

THE NEW BOOKS

THE MAN BEHIND THE GUNS

TREITSCHKE has been more neglected by English readers than almost any other German historian of equal importance in his own country. Indeed, it is doubtful whether, if the present war had not come, his writings would ever have been translated, because Treitschke's historical writings are chiefly notable for their point of view, and his point of view already seems absurd in western Europe and in America. But now that Germany has gone to war, those who inspired the propaganda of Pan-Germanism have acquired new importance in the eyes of the British and the American public, and there is a demand for translations of their important works. We have heard much of Treitschke's disciple, Bernhardi, and at last we have in English some brief selections from Treitschke's lectures on Politics.

Treitschke was a man of strange contradictions. Of Bohemian ancestry, born in Saxony and trained in Liberalism, he lived to become a champion of German expansion, Prussian domination and an autocratic monarchy. His personal life was that of the best type of German *Gelehrter*, simple, unselfish, single-minded and sincere. But, like Nietzsche and many other cloistered professors, he atoned for the unimpeachable tameness of his daily existence by cultivating a worship of violence and unscrupulousness in his speeches and writings which few actual warriors or statesmen would approve. His opinions were so extreme that they would only be weakened by paraphrase, and can best be stated in his own words:

> Without overrating itself a people does not arrive at knowledge of itself at all. The Germans are always in danger of losing their nationality, because they have too little of this solid pride.
>
> A state cannot possibly bind its will for the future in respect to another state. The state has no higher judge above it, and will therefore conclude all its treaties with that silent reservation.
>
> If we look closer, it is manifest that, if the state is power, it is only the state that is really powerful that corresponds to our idea. Hence the undoubted ludicrousness that lies in the nature of a small state.
>
> One must say in the most decided manner: "War is the only remedy for ailing nations." The moment the state calls: "Myself and my existence are now at stake!" social self-seeking must fall back and every party hate be silent. The individual must forget his own ego and feel himself a member of the whole; he must recognize what a nothing his life is in comparison with the general welfare. In that very point lies the loftiness of war, that the small man disappears entirely before the great thought of the state. . . . However, it is not worth the trouble to discuss this matter further; the living God will see to it that war constantly returns as a dreadful medicine for the human race.
>
> We must declare that of all political sins that of weakness is the most reprehensible and the most contemptible; it is in politics the sin against the Holy Ghost.
>
> The consequences of the last half-century have been terrible; in it England has first conquered the world. The Continent, in continual unrest, had no time to turn its eyes across the sea, where England seized upon everything. The Germans have been obliged to miss this and to sleep thru it, because they had so much to do with their neighbors and with their own internal struggles. Without any doubt whatever a great colonial development is a fortunate thing for a nation. And that is where the short-sightedness of our opponents of colonies at the present day comes in, that they do not understand this. Yet the whole position of Germany hangs upon how many millions of people will speak German in the future.

Treitschke, His Life and His Work, gives a translation of only a few of his essays, but is well worth reading because with them is translated a very confidential and chatty memoir of the historian by Adolf Hausrath, for some time his secretary. From the random anecdotes of the biographer and the table-talk of Treitschke himself, there is painted, not unskilfully, a very sympathetic portrait. We are forced to admire the passionate sincerity of the man, his high standard of personal conduct, and the stoicism with which he endured his almost lifelong affliction of deafness, as much as we wonder at his giving the Prussian state-system that whole-hearted reverence which few men have ever given their religion. He must be classed among the saints as well as among the prophets of militaristic imperialism.

Treitschke, Selections from Lectures on Politics, by Heinrich von Treitschke, translated by A. L. Gowans. New York: Frederick A. Stokes Co. 75 cents.
Treitschke, His Life and His Work, by Adolf Hausrath. New York: G. P. Putnam's Sons. $1.50.

A PLEA FOR PROGRESSIVISM

Progressive Democracy, by Mr. Herbert Croly, is at once an analysis of the political history of the decade which has elapsed since the death of Mark Hanna, a period which has seen more change both in the law and the attitude of the nation to law than the forty years which preceded it, and a defense of the progressive movement comparable to the exposition of modern conservatism in President Butler's *Why Should We Change Our Form of Government?* Of course when we speak of modern conservatism we should be careful to emphasize the "modern" as well as the "conservatism," for, as the author says:

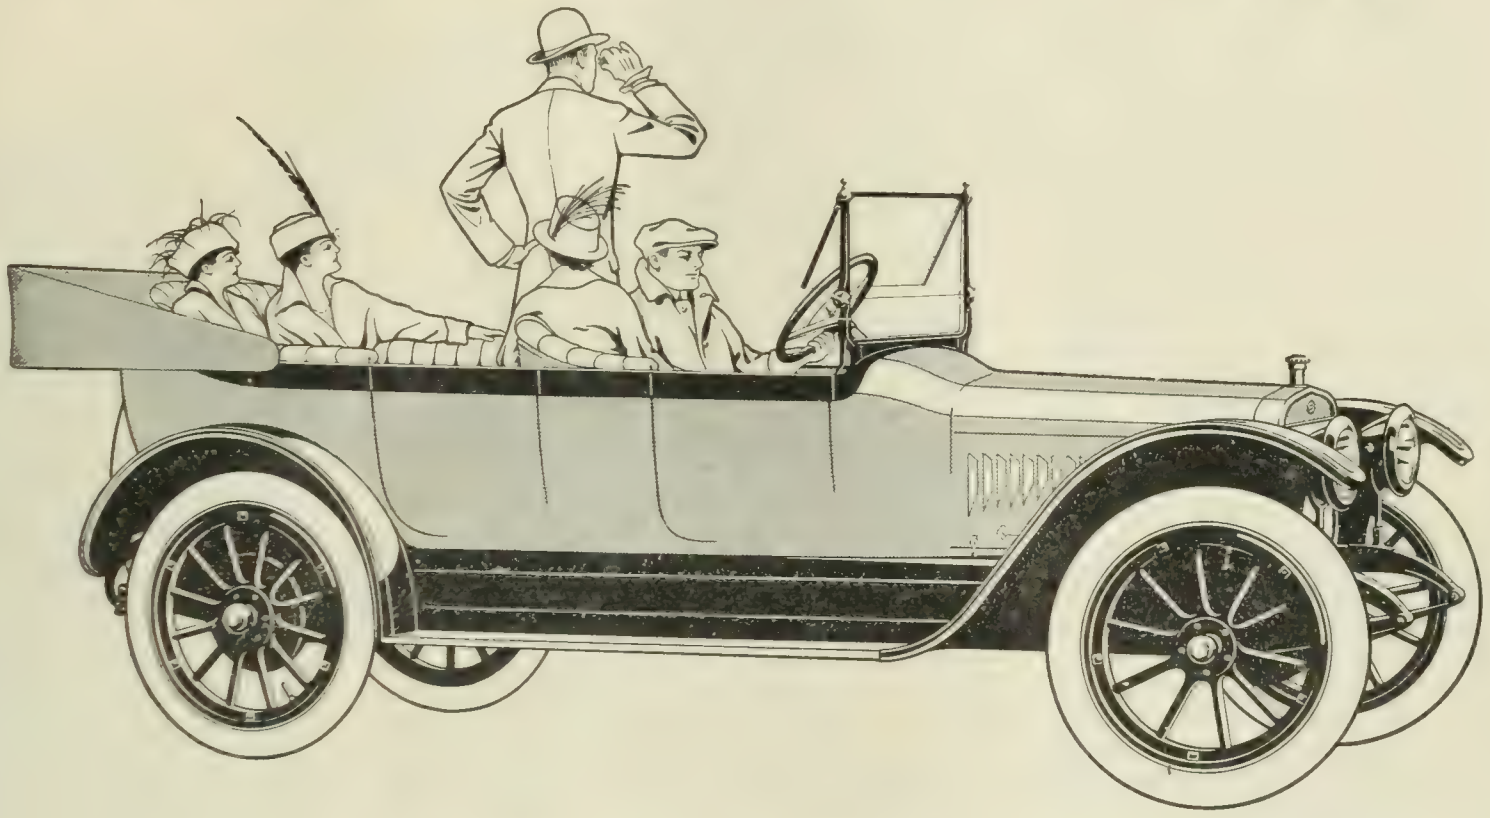
> A political leader who in 1904 would have dared go so far in economic regulation, social reform and political reorganization as Nicholas Murray Butler and Elihu Root are now prepared to go, would have been considered by Mark Hanna as a very dangerous man.

But Mr. Croly believes that the time has come to abolish all rigid constitutions and relegate our representative machinery to the performance of minor duties, trusting everything to the direct expression of the popular will. Unlike many radical critics of the Constitution of the United States, however, he values highly the service it has performed in the past; "as things actually fell out, the undemocratic Constitution contributed as much to democratic fulfilment as did any consciously democratic element in the political system."

The author does not, in speaking of progressivism, refer solely to the National Progressive Party, but to the radical movements in the older parties as well. On the one hand he regards the Democratic Party as the product of frontier individualism (a word he uses invidiously), excessively devoted to the ideal of an unchangeable Constitution, and misled by an impossible dream of equal rights. The Republicans, he says, adopted the opposite policy of "special privileges for all," a rule far less in contradiction with the institution of private property and promising much more useful results, but they failed to insure the participation of the whole of society in the distribution of these artificial favors.

When Mr. Croly generalizes about society and the individual and draws fine distinctions between the community and the democratic electorate or between equal rights and an equal distribution of privilege, he is not seldom hard to follow and occasionally not worth following. But when he leaves metaphysics to treat of concrete reforms, the reader will often come across a page as vigorous, incisive and altogether delightful as this arraignment of the conservative legalists:

> They object to direct legislation, because of its tendency to weaken the responsibility of the legislative body. As if in the past they had not exhausted their ingenuity in devising expedients to check legislatures in the exercize of their specific legislative functions! They object to the recall of elective officials, because they fear that the threat of the recall will deprive governors or judges of that independence which is so necessary for the conscientious performance of administrative duties. As if the system, for which they as a class are largely responsible, did not convert the judges, to whom was confided the actual administration of the civil and the criminal law, into perpetual suspects, who were regularly charged by counsel with dereliction and found guilty by a higher court! As if executive officials ever had any real independence under a legalistic mechanism of government which deprived them of every shred of discretion! Is it not somewhat late in the day for American legal conservatives to awaken to the value of government by men as a necessary supplement to government by law?



By assuming the editorship of *The New Republic* Mr. Croly has an opportunity to inculcate week by week the lessons of his books, *Progressive Democracy* and *The Promise of American Life*.

Progressive Democracy, by Herbert Croly. New York: Macmillan Co. $2

FRANCE'S REGENERATION

If it is indeed true that eternal vigilance is the price of liberty France must be as well-governed as any nation. After trying half a dozen republican constitutions, two or three types of monarchy, and twice being an empire, any nation but France would have ac-

A Totally New WINTON SIX

AT A NEW PRICE—$2285

Excelling quality—never before produced except in the biggest and most costly cars—is now, *for the first time*, obtainable in a car "not quite so big"—and at a price hitherto impossible:—the New-Size Winton Six, at $2285.

This car gives you everything that makes an automobile high-grade, good to look at, delightful to use, and creditable to own—even to that final note of quality, your own personally selected color scheme.

HERE ARE SOME OF ITS MAJOR FEATURES:

Motor—Famous Winton Six Cylinder L-head motor. Bore, 3⅝ inches. Stroke, 5¼ inches. Unit power plant, completely housed.

Wheel Base—128 inches, eight inches shorter than the Model 21 Winton Six.

Electric Feature—Bijur starting and lighting. Bosch ignition.

Clutch.—Five-pair dry-plate.

Transmission—Selective sliding gears: four speeds ahead and one reverse. Direct on third.

Steering—Left drive, with center control.

Springs—Chrome vanadium. Semi-elliptical front. Three-quarter elliptical rear. Rear springs underslung. Dann oil-cushionized inserts in all springs.

Wheels—Wood or wire at purchaser's option.

Tires and Rims—[illegible] inch tires on all wheels. Non-skid rear tires. Firestone demountable rims.

Equipment—One-man top of mohair. Jiffy curtains. Power-driven tire pump. Plate-glass wind shield; both sections adjustable; upper for rain vision, lower for ventilation. Warner speedometer. Clock. Klaxon horn.

Body—The American Beauty type, a creation that makes this a genuine *pleasure* car. Especially graceful in design, and the last word in comfort. Divided front seats without extra charge, if you desire them. Spacious doors on concealed hinges. Finest of coach leather. Information upon request about roadster, coupe, limousine, and other bodies.

Colors—To avoid the monotony of cars that lack distinction and individuality, we permit the widest range of color schemes on this car. Each buyer may have his car finished to suit his individual taste. Metal parts trimmed in nickel.

Service—Buyers of this car will be entitled to the same thoro gratuitous service that is extended to buyers of the Model 21 Winton Six. That means continuous satisfaction.

Price—This car, which we term the Model 21A, sells at $2285, f.o.b. Cleveland.

The Winton Motor Car Company, 133 Berea Road, Cleveland, Ohio

rejected its present parliamentary regime with resignation if not with full satisfaction. Yet we have a numerous and influential school of French writers, by no means sentimentally attached either to the Bourbon dynasty or to the Napoleonic legend, who wish again to tear the fleur-de-lys from the ground and replant its roots in better soil. Ernest Dimnet, in *France Herself Again*, has drawn up a general indictment against the whole structure of the third republic, which he scores on the ground of literary decadence, Malthusianism, anti-Clericalism, "Dreyfusism" and inglorious pacifism. The Government is in the worst case of all, being honeycombed by inefficiency and mindless opportunism.

For such deep-seated evils, supposing them all to be evils, we should expect Mr. Dimnet to prescribe a very radical cure. But he advises nothing except the familiar nostrum of a change in the national constitution. He does not even insist upon a monarchy, altho he canvasses in some detail the possible success of a *coup d'état*, but is quite content with any change which will make the executive independent of the legislative and the President of the republic as strong as a Prime Minister, instead of being, as at present, a "hat and not a head." This would restore "authority" in France, which would mean vigorous national self-assertion and an aggressive patriotism which would again lift the republic to the front rank of world powers. Indeed, the author finds much of this spirit stirring today, in spite of the regrettable weakness of the constitution, and this is the excuse for the optimistic title of a very fault-finding work. The book is on the whole well written and good tempered, the latter quality being rather rare among French reactionaries, and gives very clearly the views and temper of the Right, but it is very hard to see why rule by the Chamber of Deputies in France should be worse than rule by the House of Commons in England, or why an author who so greatly admires the French people should so profoundly distrust their political activity. Perhaps one would have to be born on the Seine to enter completely into the author's point of view. In a final chapter added in August, M. Dimnet rejoices over the war as likely to sweep away the radicalism, commercialism and internationalism which he regards as more dangerous to his country than German militarism.

France Herself Again, by Ernest Dimnet. New York: G. P. Putnam's Sons. $2.50.

SHORT STORIES DICKENSESQUE

Not since Mr. Leonard Merrick's stories, *Whispers About Women*, were first published in this country has imported fiction offered the brilliance and charm of Barry Pain's *Stories Without Tears*. Like Mr. Merrick, Pain has had to achieve great success in England before being introduced to the American public. While Kipling was writing his *The Light That Failed* and *Barrack Room Ballads*, Pain was doing his first work; like Kipling, he, too, owes his discovery to Robert Louis Stevenson, who compared him to De Maupassant.

Barry Pain is another of the modern fiction writers who have gone to school to Dickens for their methods of observation. Beneath the foibles and the satire of provincial life one feels instinctively the brush-strokes that created the Todgers and the Pecksniffs, but set down with a crispness of expression altogether modern. The especial welcome of these tales, some comic, some witty, others pathetic or tragic, however, is in their great simplicity. Ably they refute that rising cult which does excessive reverence to the "technique" of the short story, forgetful of the fact that the greatest art lies neither in "situations" nor "climax," but in a luminous insight into human character served by a sympathetic and painstaking hand.

Stories Without Tears, by Barry Pain. New York: F. A. Stokes Co. $1.25.

A MODERN TROUBADOUR

Nicholas Vachel (rime with Rachel) Lindsay started out to walk thru Kansas as a penniless poet, selling his songs for bread. But when the farmers raced after him in automobiles begging him to come and work in the fields for three dollars a day and big meals, he had to send money home to keep his pockets empty. His genial sympathy with men of all sorts, makes his *Adventures While Preaching the Gospel of Beauty* a delightful book.

Kennerley. $1.

A BUDGET OF NIGHTMARES

Algernon Blackwood, the author of *Pan's Garden*, has again dabbled in the uncanny, and his *Incredible Adventures* show that he has lost nothing of his old-time wizardry. Such stories as "The Damned" and "A Descent into Egypt" are masterpieces of atmosphere, built up by elaborate descriptions and the magic of an unusually rich style. Over-conscious artistry blunts somewhat the desired effect and the reader becomes more interested in the author's style than in the adventures.

Macmillan. $1.35.

HASTY GLIMPSES OF HISTORY

Social and economic conditions in the United States at the time of the signing of the Treaty of Ghent are the subject of Gaillard Hunt's *Life in America One Hundred Years Ago*, which has been prepared at the request of the Committee of One Hundred as a part of the intended celebration of the century of peace. While the book shows haste, it gives an idea of the state of the country at the time, and the preface on the treaty and its results should have wide reading.

Harper. $1.50.

NOT FOR SOLDIERS

Both the martial title and the suggestive name of the author might lead one to expect that *Marching Men*, by Leonidas Robinson, concerns some phase of the Great War, but the movements really portrayed are all in the fields of theological activity, where recent changes have called for new alignments and viewpoints in religious work. The volume seeks to bring to the attention of preachers new avenues of approach to religious training.

Sherman, French & Co. $1.25.

PURE ENGLISH AT ITS FONT

The Story of Beowulf has been often translated, and Ernest J. B. Kirtlan can hardly claim for his new version that it is "modern English prose." It is far from that, for he has sacrificed present-day idiom in the attempt to parallel the original and avoid non-Saxon words. But it is obviously not intended for students, and its attractive typography and highly archaic flavor may result in attracting that unpedantic person, the General Reader.

Crowell. $1.50

ROSES IN AMERICAN GARDENS

G. C. Thomas's *Practical Book of Outdoor Rose Growing* is a compromise between picture book and handguide. It has many autochrome plates, but its core is a critical list of over 150 roses, giving the results of the author's experiments with each variety. The simpler processes of rose culture are plainly described, but the author has not attempted to do more than refer the reader to detailed handbooks on the more delicate operations.

Lippincott. $4

IF SHE NEEDS COUNSEL

The author of *A Montessori Mother*, Dorothy Canfield Fisher, has written a further manual for mothers entitled *Mothers and Children*, which is sensible and entertaining. The twentieth century mother takes her task pretty seriously and she is likely to welcome the sane, scientific and readable advice of a trained mother.

Henry Holt. $1.25

ALMOST A BROKEN CHALICE

An air of reverence and a flavor of olden-time phraseology are combined to make a suitable accompaniment for the introduction of biblical and classical characters in *The Divine Brethren*, by H. S. Grey. The discourse is a gentle fantasy in praise of human love as a sacred and holy possession.

Macmillan. $1.25.

A CALENDAR FOR CHILDREN

J. B. Lippincott Company have just issued a calendar that will delight the children and all those older folk who still love the beautiful things of the imagination. Twelve pictures from the fine illustrated edition of The Stories All Children Love series, chosen not only for their appeal to the child, but also for their value in evoking the child's powers of mind and character.

Lippincott. 14 cents

ORIENTAL RUGS

A handy, useful, low-priced introduction for beginners in the lore of Eastern carpets is *The Mystery of the Oriental Rug*, by Dr. G. Griffin Lewis, the author of a larger treatise on the subject which has met with considerable success. Dr. Lewis is so filled with his subject that he makes it intensely interesting, and the little book contains many pictures, mostly showing what beautiful rugs can be bought today at moderate cost.

J. B. Lippincott. $1.50

What does the New Year mean to YOU?

Is it to be the same old grind of hard work, uncongenial employment and small pay?

Is it to be another twelve months of standing still while you watch other men get the advancement **you** hoped to get?

Or, will you make it a year of real **achievement?** Will you realize **now** that the better job goes only to the man who has the **training,** and will you take steps **now** to get the training that the better job requires?

If you really WANT the coming year to count for something, let the International Correspondence Schools help you to make your progress SURE and TANGIBLE.

It is the business of the I. C. S. to raise salaries. For 24 years the I. C. S. have been training men for success in the kind of work they like best. During this period, many thousands of earnest, ambitious men of all ages and occupations have obtained better-paying positions in more congenial surroundings through a course of I. C. S. instruction.

Let the I. C. S. help **you,** too. Join the army of well-paid men.

Mark the Coupon

The coming year is the most important in your life. Get a real start **now.** The first essential to success is initiative. Mark and mail the coupon **today.**

INTERNATIONAL CORRESPONDENCE SCHOOLS

Box 1024 SCRANTON, PA.

A NUMBER OF THINGS

BY EDWIN E. SLOSSON

IF I should ever get into the British *Who's Who*, which requires a specification of one's recreations, I should be obliged to put down mine as "teaching physical science to Freshmen in Journalism." It's more fun than you would think. More work, too, for I can't say that they study harder or are quicker on the up-take than ordinary students. But they are more unexpected in their reaction. Lecturing to the class is like dropping a reagent into a row of test-tubes containing unknowns. Sometimes there is a precipitate, sometimes effervescence, sometimes nothing. The effervescence usually takes the form of puns and poetry, somewhat to the student's disadvantage, for metrical physics commands no premium since the days of Lucretius. But when I look over the papers on gravitation I come across this thrown in as a sort of *lagnappe* or *pourboire:*

Sir Isaac Newton underneath a tree,
A bunch of facts whose wisdom I can't see,
And Dr. Slosson handing out a quiz—
Yep, wilderness looks pretty good to me!

The long, long thoughts of adolescence seem to fall most naturally into the meter of the Rubaiyat. In among the equations of a notebook I found the following from some belated Rosicrucian:

'Tis all a chemistry of night and day
Where alchemists supreme with humans play.
Ignite within us one great cosmic ray
That makes us human souls—not living clay.

By what innate perversity of mind teachers manage to ask the wrong questions is always a source of wonderment and grief to the rising generation. This emotion found poignant expression in these verses written in a quiz-book whose pages left, alas, all too much opportunity for such impromptu addenda:

Sometimes I think that Dr. Slosson hates me,
For all the term he has done naught but task me.
The question that I know—how 't aggravates me!—
Is aye the one that he will never ask me.

I tried cutting down the time of the quiz to ten minutes, but even that did not result in pure prose, for even while I was collecting the papers this quatrain is precipitated on the test paper:

Here is a question I fain would ask.
The answer you've not yet taught.
If you give me a naught on this quiz on air
Does it make me an aeronaut?

Deploring this dissipation of energies so much needed in other directions, I determined that if another outbreak occurred any measures of retaliation short of war would be justified to put a stop to the practise. So when these lines appeared on the back of a quiz-book:

Doctor, pray give me a "C"
Or you'll be upbraided,
For if you grade this a "D"
I'll feel D-graded.

I administered the following as an antitoxin:

You'll get a "C"
In chemistry,
Yet might have done much better;
But for this curse
Of writing verse
You'd have a superior letter.

But even this awful example did not afford relief. Chronic paranomasia is doubtless incurable by anything short of ten thousand volts. On the final examination these verses appeared:

I can tell you the compounds of sulfur
Or the reason why diamonds are hard,
Why oxidized metals are dull for
I'm a regular chemical bard;

I can tell you and most precisely
The complex components of air,
Or figure out quickly and nicely
How long bunco jewelry'll wear.

Perhaps you're aghast at my knowledge
And think I'm of uncommon clay.
Fret not! I spent two years at college
And two years in chemistry A.

(P. S.—Please pardon the frivolity—it sizzled up—like CO_2.)

It sometimes happens, however, that students know better than their instructors how best to employ their time to their own advantage. Perhaps it is so in this case. The sight of F. P. A. drawing $10,000 a year for sitting like St. Simeon Stylites on top of his Conning Tower Colyum has roused their ambitions to occupy a like position of conspicuosity and profit, and they cannot see that a knowledge of science, literature, finance, labor questions or foreign affairs offers so bright a prospect for a career.

The Socratic dialog is a chess game proceeding by forced moves and leading to inevitable checkmate.

Our entire educational system, primary and secondary, collegiate and technical, is sick with inconsequential bookishness, and school work has become the most inefficient of all the organized efforts of men. Yes we have our manual training schools and college courses in shop work. But from the absurdity of an Academic Epitome of Industry may the good Lord deliver us! And he will deliver us, never fear, for the law of economy is His law, too. The greatest educational problem of our time is to make use of commercial and industrial establishments as schools to the extent that they are schools.

Now you might suppose that this is the prejudicial tirade of an ignorant outsider. Quite the contrary. I abstract it from a little package of dynamite called *Bill's School and Mine*, manufactured by Prof. W. S. Franklin of Lehigh University, who has spent all his life teaching in universities and ought to know what they are good for—and not good for.

Przemysl I have mastered. It runs trippingly off my tongue. Ypres I can now pronounce without a gasp and I no longer blush to mention the Bug. But I do hope they will stop fighting in Synowackowysze and move on to some easier place.

It costs $125 in England to call a lady "a modern Jezebel." Such was the fine imposed recently upon a draper of Kilsyth who in a toast at a temperance tea following the municipal election used the following intemperate language:

The blackest sight I ever saw was a modern Jezebel in a motor-car bringing the women voters to vote for publicans. If there is anything this side of hell which is worse, I do not know it.

According to this ruling John Knox when he alluded to "the bloody Jezebel" on the English throne in that classic of the anti-suffragists, *First Blast of the Trumpet against the Monstrous Regimen of Women*, would have been liable to a double fine; $125 for the "Jezebel" and nobody knows how much for the "b—y," which only Bernard Shaw may employ with impunity.

A discouraging feature of the suffrage movement is that the majority of women favoring it are reluctant to show their colors. Yellow *is* trying to most complexions.

All the cynic's swans are geese.

He must be very young or full elderly who, on seeing a crocodile approach him, does not cross to the other side of the street. It was not always so. In times gone by it was worth the while of a sober citizen, walking "with upright hat" about his business, to pass a crocodile as near as might be. There was a smiling air, deferential or roguish about the preacher, a frank and pretty way, which set him thinking what good friends and playmates a man might find among women, and how fortunate his sons or his nephews were to have all these delightful women growing up to be their friends and playmates.

Coming across the above in that well of English undefiled, the London *Times*, makes me feel how ignorant I am of the language. I have from English novels acquired some sort of a conception of what the "flapper" is, and I have become acquainted with the *Backfisch* from *Fliegende Blätter* and with the ingenue of the stage. But the crocodile, which apparently belongs to the same charming genus, I have never met on the street or if I did I past her or them by unrecognizing.

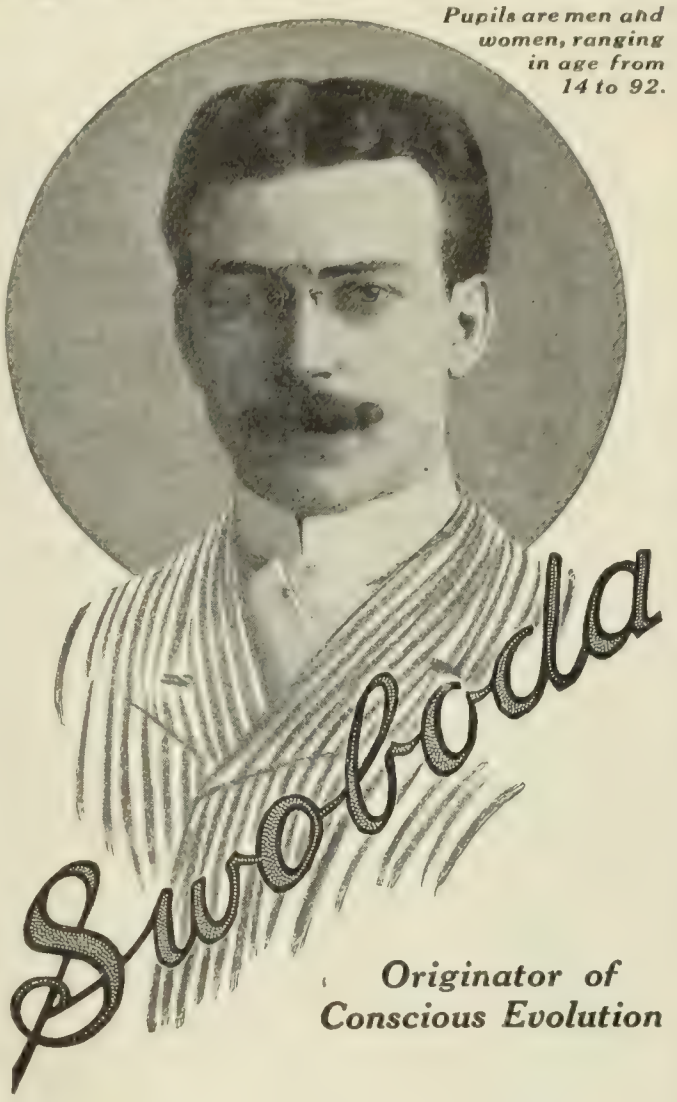
As I look about I am struck with the wisdom of Providence in giving children to the mothers instead of to the old maids.

What an awful world this would be if people talked as they do in novels and acted as they do on the stage.

You may tread on my corns and be forgiven, but see to it that you keep off my prejudices.

Why Not Live the Thoroughly Successful Life?

I know that I can easily, quickly and positively prove to you that you are only half as alive as you must be to realize the joys and benefits of living in full; and that you are only half as well as you should be, half as vigorous as you can be, half as ambitious as you may be, and only half as well developed as you ought to be.



The fact is that no matter who you are, whether you are young or old, weak or strong, rich or poor, I can prove to you readily by demonstration that you are leading an inferior life, and I want the opportunity to show you the way in which you may completely and easily, without inconvenience or loss of time, come in possession of new life, vigor, energy, development and a higher realization of life, success and happiness.

Become Superior to Other Men. The Swoboda System can make a better human being of you, physically, mentally and in every way. It creates a greater activity of the forces of life which in you are partially dormant, thus compelling them to become more alive and positive, enabling you to grow and evolutionize to a higher state of perfection. The Swoboda System can do more for you than you can imagine. It can so vitalize every organ, tissue and cell of your body as to make the mere act of living a joy. It can give you an intense, thrilling and pulsating nature. It can increase your very life. I not only promise it, I guarantee it.

Why Take Less Than Your Full Share of Life and Pleasure? Are you living a full and successful life? Why not always be at your best?—thoroughly well, virile, energetic. Why not invest in yourself and make the most of your every opportunity? It is easy when you know how. The Swoboda System points the way. It requires no drugs, no appliances, no dieting, no study, no loss of time, no special bathing; there is nothing to worry you. It gives ideal mental and physical conditions without inconvenience or trouble.

The Swoboda System of Conscious Evolution is no experiment. I am giving it successfully to pupils all over the world. I have among my pupils hundreds of doctors, judges, senators, members of cabinet, ambassadors, governors, thousands of business and professional men, farmers, mechanics and laborers, and almost an equal number of women—*more than two hundred thousand people have profited through this system.*

Your Earning Power, your success depend entirely upon your energy, health, vitality, memory and will power. Without these, all knowledge becomes of small value, for it cannot be put into active use. The Swoboda System can make you tireless, improve your memory, intensify your will power, and make you physically just as you ought to be. I promise it.

Pupils are men and women, ranging in age from 14 to 92.

Originator of Conscious Evolution

WHAT OTHERS HAVE TO SAY

"Can't describe the satisfaction I feel."

"Worth more than a thousand dollars to me in increased mental and physical capacity."

"I have been enabled by your system to do work of mental character previously impossible for me."

"I was very skeptical, now am pleased with results; have gained 17 pounds."

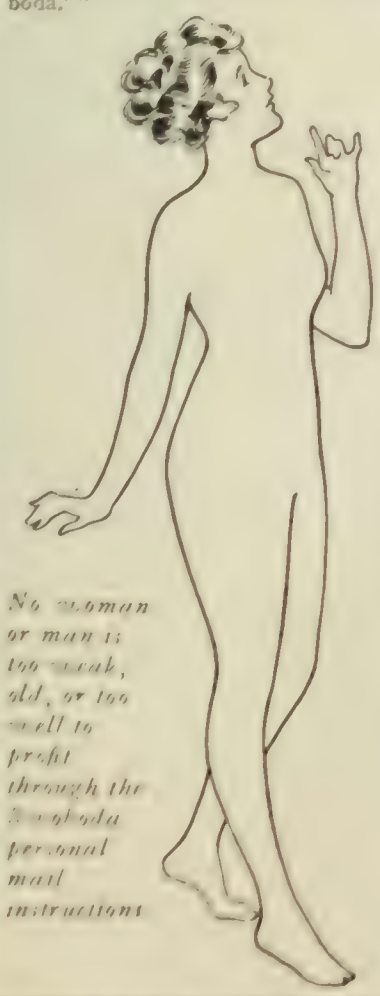
"The very first lessons began to work magic. In my gratitude I am telling my croaking and complaining friends, 'Try Swoboda.'"

"Words cannot explain the new life it imparts both to body and brain."

"It reduced my weight 29 pounds, increased my chest expansion 5 inches, reduced my waist 6 inches."

"I cannot recommend your system too highly, and without flattery believe that its propagation has been of great benefit to the health of the country."

"My reserve force makes me feel that nothing is impossible, my capacity both physically and mentally is increasing daily."



"I have heard your system highly recommended for years, but I did not realize the effectiveness of it until I tried it. I am glad indeed that I am now taking it."

"Your system developed me most wonderfully."

"I think your system is wonderful. I thought I was in the best of physical health before I wrote for your course, but I can now note the greatest improvement even in this short time. I cannot recommend your system too highly. Do not hesitate to refer to me."

"You know more about the human body than any man with whom I have ever come in contact personally or otherwise."

"Your diagnosis and explanation of my brain trouble was a revelation to me. I have had the best physicians of my State, but your grasp of the human body exceeds anything I have ever heard or known. I have read your letters to many people, also to my physicians, who marvel at them."

No woman or man is too weak, old, or too well to profit through the Swoboda personal mail instructions

MY NEW COPYRIGHTED BOOK IS FREE. It explains the SWOBODA SYSTEM OF CONSCIOUS EVOLUTION and the human body as it has never been explained before. It will startle, educate, and enlighten you.

My book is not a dry treatise on anatomy and physiology. It tells in a highly interesting and simple manner just what you have always wanted to know about yourself.

You will cherish this book for having given you the first real understanding of your body and mind. It shows how you may be able to obtain a superior life; it explains how you may make use of natural laws for your own advantage.

My book will give you a better understanding of yourself than you could obtain from a college course. The information which it imparts cannot be obtained elsewhere at any price. It shows the unlimited possibilities for you through conscious evolution of your cells; it explains my discoveries and what they are doing for men and women. Thousands have advanced themselves in every way through a better realization and conscious use of the principles which I have discovered and which I disclose in my book. It also explains the DANGERS OF EXERCISE and of EXCESSIVE DEEP BREATHING.

Unless you already know all about the SWOBODA SYSTEM OF CONSCIOUS EVOLUTION for men and women, you should lose no time in securing my free book. It will give you information which you will value, because it will open new avenues through which you may become successful in satisfying your most intense desires.

I offer my System on a basis which makes it impossible for you to lose a single penny. My guarantee is startling, specific, positive and fraud-proof.

Write for my FREE BOOK and full particulars to-day before it slips your mind. Make up your mind to at least learn the facts concerning the SWOBODA SYSTEM OF CONSCIOUS EVOLUTION for men and women.

ALOIS P. SWOBODA, 1242 Aeolian Hall, New York City, N. Y.

THE MARKET PLACE

A REVIEW OF FINANCE AND TRADE

RELIEF FOR THE RAILROADS

TEXT OF THE INTERSTATE COMMERCE COMMISSION'S DECISION IN THE REOPENED RATE CASE

IT is not necessary to make any extended summary of the conclusions contained in the commission's original report. Among other things, it found that—

In view of a tendency toward a diminishing net operating income, as shown by the facts described, we are of opinion that the net operating income of the railroads in official classification territory, taken as a whole, is smaller than is demanded in the interests of both the general public and the railroads, and it is our duty and our purpose to aid, so far as we legally may, in the solution of the problem as to the course that the carriers may pursue to meet the situation. . . .

The carriers offered further evidence of their financial condition during the fiscal year ended June 30, 1914, including returns for that year completed by addition of the revenue and expenditure account for the month of June and the capital investment account for the year. . . .

These figures serve to emphasize our previous finding of the need of carriers in official classification territory, taken as a whole, for increased net revenue.

For the fiscal year just ended the net operating revenues as shown by the carriers are lower than was estimated or anticipated when the original report was issued. . . .

From whatever comparative standpoint viewed, the net operating revenues of the last fiscal year must be regarded as unduly low. Operating costs and operating revenues fail to show the tendency to such concomitant variation as should prevail in the transportation industry. While the gross revenue in that year declined only about 3.4 per cent, the net revenue shrank approximately 17.7 per cent as against the previous fiscal year. The indication is that some important items of cost have become relatively inelastic, and that a fall in gross revenue leaves an increasingly narrow margin of net revenue. . . .

It was urged on behalf of the carriers and the investment bankers who appeared at the hearing that the war in Europe has created a condition which renders the diminution of the carriers' net income a menace to the prosperity of the country; that the war has placed an added strain upon the credit of carriers; that rates of interest will rise; that a large volume of railroad securities is held abroad; that the denial of the increase in freight rates would, in view of the diminished net income, be followed by a dumping of foreign securities upon the American markets; that our markets would not be able to absorb these securities, at least, without great fall in prices; that disaster would result not only to our railroads but to insurance, banking and industrial concerns, and that for these and other reasons, extending far beyond the direct needs of the carriers themselves, we should now allow the proposed increase in rates.

With some of these considerations we have, as a commission, nothing to do. Our powers and functions are those, and only those, conferred by Congress, as was said in Advances in Rates, Western Case, 20 I. C. C., 307, at page 317:

> We must not regard too seriously, however, the effort of railroad counsel to establish this commission in loco parentis toward the railroads. We must be conscious in our consideration of these rate questions of their effect upon the policy of the railroads and ultimately upon the welfare of the state. This country cannot afford to have poor railroads, insufficiently equipped, unsubstantially built, carelessly operated. We need the best of service. . . . Nevertheless, it is likewise to be remembered that the Government has not undertaken to become the directing mind in railroad management. We are not the managers of the railroads, and no matter what the revenue they may receive there can be no control placed by us upon its expenditure, no improvements directed, no economies enforced.

The conflict in Europe will doubtless create an unusual demand upon the world's loan fund of free capital, and may be expected to check the flow of foreign investment funds to American railroads. It appears that our railroads represent the bulk of European investment in this country. The rate of interest—the hire of capital—has risen during the last decade and may rise still further. It is computed that in the years 1915, 1916 and 1917 the carriers in official classification territory must arrange for the payment or refunding of securities aggregating more than $500,000,000. True, the representations of the carriers in the 1910 cases, that without the increases then sought their credit must totally vanish, proved strangely at variance with their subsequent experience in the borrowing of many hundreds of millions. But we do not doubt that the financial problems of the carriers have been made much more acute by reason of the war, and if we are to set rates that will afford reasonable remuneration to the carriers we must give consideration to the increased hire of capital as well as to other increased costs.

The suggestions, made in our original report, of methods whereby to increase net revenue were not susceptible of being put into immediate operation or calculated to produce immediate financial results. This was recognized in our original report. The period which has since elapsed has, of course, been entirely too short for either purpose. Some testimony was offered at the further hearing bearing on what had been done or undertaken in line with these suggestions, and estimates were made by the traffic officials of several carriers as to the annual yield to be expected. These estimates were not based on any accounting computation and can afford little guide as to what the results will prove to be.

While we differ as to the relative importance to be attached to the various considerations presented, we agree in the conclusion that, by virtue of the conditions obtaining at present, it is necessary that the carriers' revenue be supplemented by increases thruout official classification territory.

Whatever the consequences of the war may prove to be, we must recognize the fact that it exists, the fact that it is a calamity without precedent and the fact that by it the commerce of the world has been disarranged and thrown into confusion. The means of transportation are fundamental and indispensable agencies in our industrial life and for the common weal should be kept abreast of public requirements.

The following dividends are announced:

American Brake Shoe & Foundry Company, preferred, quarterly, 2 per cent.; common, quarterly, 1¾ per cent, both payable December 31.

Baldwin Locomotive Works, preferred, semi annual, 3½ per cent; common, 1 per cent; both payable January 1, 1915.

Broadway Savings Institution, semi-annual, 4 per cent per annum, payable on and after January 18, 1915.

Brooklyn Savings Bank, 4 per cent per annum, payable on and after January 20, 1915.

German Savings Bank, 4 per cent per annum, payable after January 20, 1915.

Irving Savings Institution, 4 per cent per annum, payable on and after January 18, 1915.

The Manhattan Savings Institution, semi-annual, 3½ per cent per annum, payable on or after January 18, 1915.

Niagara Falls Power Company, $2 per share, payable on and after January 15, 1915.

United Fruit Company, quarterly, 2 per cent, payable January 15, 1915.

American Telephone & Telegraph Company, $2.00 per share, payable January 15, 1915.

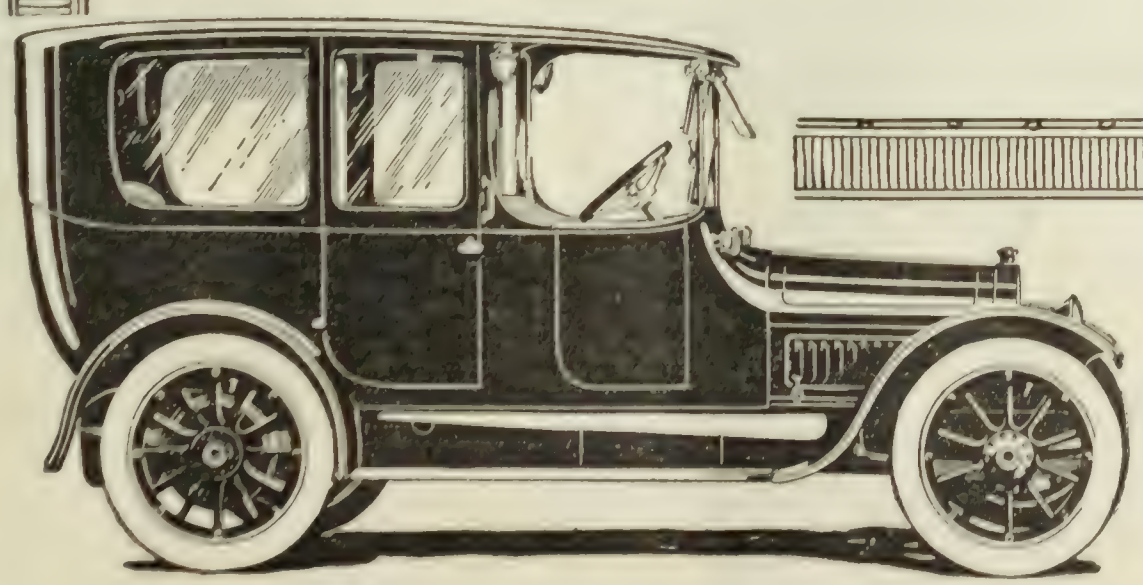
CADILLAC ENCLOSED CARS

The eight-cylinder motor gives to the Cadillac Enclosed Cars a smoothness of motion that is entirely new.



It accentuates and emphasizes the luxury and ease of riding which is so desirable in cars of this type.

Nor is this mechanical perfection the sole incentive to ownership.

For these cars are matchless specimens of the coach-builder's art.

Exteriorly they are handsomely proportioned and flawlessly finished.

The interiors are equally faultless, both in depth and softness of upholstery, and in the quiet richness of trimmings and appointments.

A PRIMARY SCHOOL OF CONSERVATION

It is too customary to think that the Audubon Society is chiefly interested in a crusade against women wearing wild birds' feathers on their hats. It is noteworthy, then, to learn from the secretary's annual report that not one per cent of the $90,000 expended last year by the National Association of these societies was spent in that direction. In fact, that fight has been won, with no real casualties except to a lot of man-milliners, who now have more time to attend to the remainder of their business. The Audubon folks, also, have found quite enough else to do.

The Association reports that it is guarding by means of paid wardens scores of islands and shore-places all along the coasts of both oceans, on the Great Lakes, and about the Gulf of Mexico, where breeding colonies of birds find a refuge—hundreds of thousands of them. This is especially true of Florida and Louisiana where the plume-bearing birds would by this time have been exterminated had it not been for these protective measures, seconded by legislative assistance.

Of the many fields of activity in which the Association is exerting its good offices, none is more striking or conducive to public welfare than the Audubon work in schools. The progress made in educating children all over the country to take a loving interest in birds, and to understand their great value as aids to agriculture, is remarkable. It was announced in 1913 that 52,000 children had shared the joy and benefits of membership in the Junior Audubon Classes. During the past year this number was more than doubled (115,039), and the 10,000 or more teachers involved were unanimous in extolling the good influence thus exerted on the children and on their school-work. During the coming season another large increase is anticipated; and everyone must rejoice that this is so, because the sentiments of kindness and the lessons in national economy placed in the minds of the children will bear good fruit when they become men and women.

Progress in a new direction is announced. A demand has been growing more and more pressing for information as to methods of attracting birds about the home and on the farm; and incessant calls have come for advice as to the proper way to rear ducks, geese, quails, pheasants, and other wild game-birds, by artificial means. The Association purposes to meet the needs by employing an expert, Herbert K. Job, who will give all his time to collecting such information, and to carrying it to the public by means of lectures, bulletins, and practical demonstrations. This new department of applied ornithology will be especially welcome to owners of large estates, managers of public parks, and the like, who are already availing themselves of its help, and have contributed much needed help to the resources of the Association.

WHAT 15c WILL DO

The little matter of **15c** in stamps will bring you the **Pathfinder** for **13** weeks on trial. The **Pathfinder** is an illustrated weekly, published at the Nation's Capital, for the Nation; a paper that gives all the news of the world and that tells the truth and only the truth; now in its 22d year. This paper fills the bill without emptying the purse; it costs but $1 a year. If you want to keep posted on what is going on in the world, at the least expense of time or money, this is your means. If you want a paper in your home which is sincere, reliable, entertaining, wholesome, the **Pathfinder** is yours. If you would appreciate a paper which puts everything clearly, fairly, briefly—here it is at last. Send only 15c to show that you might like such a paper, and we will send the **Pathfinder** on probation **13** weeks. The 15c does not repay us, but we are glad to invest in New Friends. Address **The Pathfinder, Box M, Washington, D. C.**

120 Acre FARM for sale, North Stonington Conn. Old apple orchard. 40 acres cultivated. Modern 13-room house. Good Water. 1½ miles from trolley. Address ALLYN L. BROWN, Admr.

FINE WISCONSIN FARMS for sale of all sizes and prices. They are among the finest in the State of Wisconsin, the soil is very productive, and the crops are always sure, as the rainfall is always ample; they consist of corn, wheat, rye, barley, clover, timothy, alfalfa, fruit and vegetables. They are located near churches, schools and good markets; prices are very reasonable and terms are part cash and balance in five years at 6 per cent. interest. Come at once and make your selection. We have just the farm you are looking for. Hart Lumber and Cedar Company, Oconto, Wis.

"Herold, will you give Auntie a bite of your apple?"

"Yes, if you'll promise to take the bite right where the worm hole is."—*Life*.

Driver O'Flanagan (to his horse which refuses to get up after fading) Well of all the lazy spalpeens Get up will yez or I'll drive right over yez!—*London Opinion*.

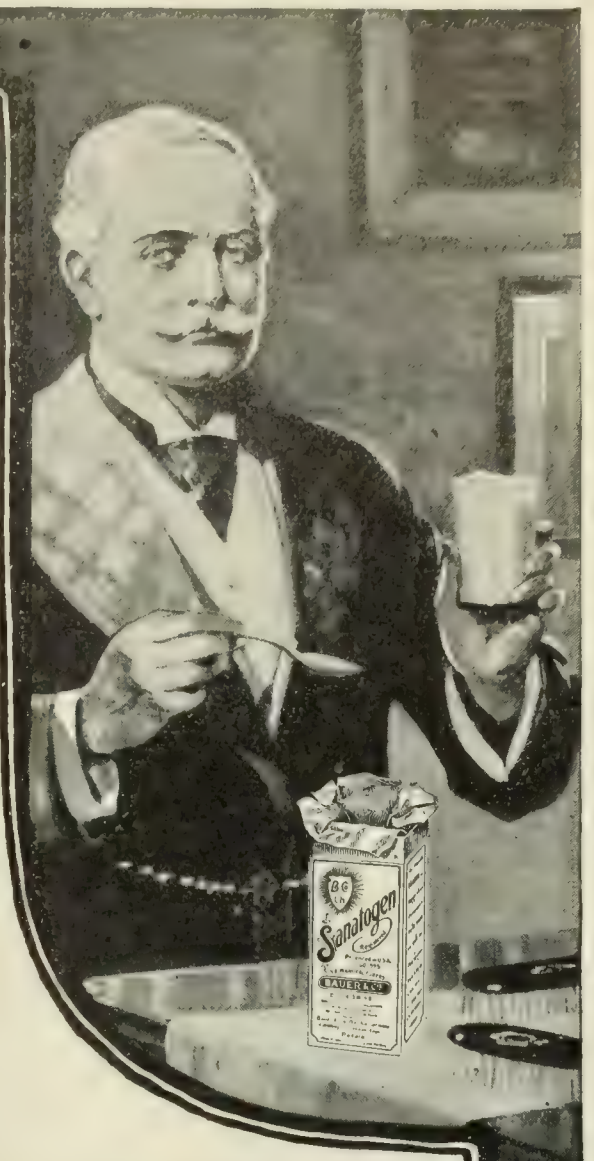
"Men are always late. I have waited here since six o'clock for my husband to come, and it is now seven thirty."

"At what hour were you to meet him?" asked the woman who had cried last.

"About five o'clock."—*Buffalo Courier*

Keep Young while growing Old—

AFTER all youth is often more a matter of nerves than of years. You see that proven almost every day—this man of thirty, nerves wrecked and old before his time—that man, sixty but bright-eyed, sprightly because he kept his nerves *youthful*.



It is in this care of the nerves that Sanatogen is of such signal service. For to the hungry nerves, impoverished by overdrafts, illness, worries and neglect, Sanatogen brings just the foods they must have for speedy restoration to health—pure albumen and organic phosphorous in easily taken-up form.

And by thus nourishing the weakened nerve-cells and tissues, Sanatogen helps bring back the ease of digestion, the restful slumber and the vigorous health of youth.

And you—if the enthusiastic letters of 21,000 physicians and the grateful praise of scores of noted people—if that testimony means anything—you will not long delay giving Sanatogen its opportunity to help *you*.

Sanatogen is sold by good druggists everywhere, in three sizes from $1.00 up.

Grand Prize, International Congress of Medicine, London, 1913

Col. Henry Watterson, the famous Editor writes:

"I feel I owe it to truth to state that I have made a thorough trial of Sanatogen and that I have found it most efficacious and beneficent. I do not think I could have recovered my vitality, as I have done, without this Sanatogen operating equally upon the digestive organs and nerve centers."

John Burroughs, the distinguished naturalist and author, writes:

"I am sure I have been greatly benefited by Sanatogen. My sleep is fifty per cent. better than it was one year ago, and my mind and strength are much improved."

SANATOGEN
ENDORSED BY OVER 21,000 PHYSICIANS

Send *for Elbert Hubbard's new book*—"Health in the Making." Written in his attractive manner and filled with his shrewd philosophy together with capital advice on Sanatogen, health and contentment. It is FREE. Tear this off as a reminder to address THE BAUER CHEMICAL CO., 26-R Irving Place, New York.

Atlantic Building, 31 Wall St., New York

Insures Against Marine and Inland Transportation Risk and War Risks. Pays All Claims Promptly. Makes Loss Pay Abroad in Europe and Oriental Countries.

Organized in the State of New York in 1842, was governed by a board consisting of a similar number of the oldest members of the Underwriting Fraternity, and has always been conducted on the same lines of conservatism and liberality which characterize the oldest and most successful Marine Insurance Companies, and invariably with a large cash capital at the entire command of the assured.

During its existence this company has never sustained a single dollar of loss that was not paid in full without compromise, and has always been conspicuous for the promptness with which its engagements have been met.

During its existence this company has received in cash premiums	$27,219,943,826 00
Received premiums thereon, to the extent of	282,295,429 80
Paid policyholders for losses and returned premiums	141,564,000 00
Paid dividends to stockholders	80,740,400 00
Paid dividends to policyholders	82,497,349 80
Interest received during the year	7,243,080 00
Interest paid on certificates	22,585,640 25
On December 31, 1913, the assets of the company amounted to	13,259,024 16

The profits of the company revert to the assured and are divided annually upon the premiums terminated during the year, thereby reducing the cost of insurance.

For such dividends certificates are issued subject to dividends of interest as may be declared, in accordance with the charter.

INSURANCE

CONDUCTED BY W. E. UNDERWOOD

THE METROPOLITAN PROPOSITION

On November 30, last, I briefly outlined in this place, and favorably commented on the proposal made by the management of the Metropolitan Life Insurance Company to transform that company from a joint-stock corporation, owned and controlled by its shareholders, into a mutual company to be owned and directed by its policyholders. As it stands, the proposition provides for the retirement of the 80,000 shares of stock of a par value of $25 a share, a total of $2,000,000, at a premium of $50 a share, thus involving the expenditure of $4,000,000 of the surplus. This means that the stockholders would receive $6,000,000—the $2,000,000 of capital, already their property, and $4,000,000 in addition. Under the charter of the company and in conformity with the law, this stock is entitled to receive, and for many years years has borne, dividends of seven per cent a year.

A reader of The Independent, resident at New Haven, Connecticut, the holder of a $5000 policy in the Metropolitan, writes disagreeing with the conclusions I exprest and states that on the 28th instant, the date appointed for taking a vote of the policyholders on the question, he will cast his ballot against the plan. I will endeavor in our limited space to summarize our correspondent's objections.

Erroneously asserting that the proposed price for the stock is 300 per cent greater than par, he asks:

"Is the market price of a safe seven per cent stock worth three times its par value?

"Are the directors working for the real interests of the company in trying to put over a transaction of this nature at the price quoted?

"Will any similar or near similar stock earning seven per cent sell at a premium above par to the extent of three times its interest-bearing value?"

Our correspondent then asks if I would buy from him at three times its face value a seven per cent mortgage, and that if I would, what rate would I be realizing on the investment?

Continuing, he intimates that the law is lax, in that it permits a transaction of this kind; and that provision should have been made limiting the price of the stock to "equivalent market rates on similar interest-bearing securities." "Should the directors as majority stock owners," he inquires, "cut a melon of approximately two million dollars clear profit above the money they actually invested after holding well paid positions under a liberally governed company for many years?"

Perhaps the market price of an ordinary industrial or commercial seven per cent stock is not worth three times its face value. If its value were as immutable as is the stock of a large successful life insurance company, and if it had behind it a surplus equaling some twenty times its par value, we should admit that as an article of sale it was worth at least three times its face. Again there are no "similar or near similar stocks earning seven per cent," except those of a few other large life companies. In answer to the question about the seven per cent mortgage, I answer that if it were a perpetual mortgage, and if it carried claims against a large existing surplus, I would willingly give three times its face value for it. On the other hand, I think if I held any considerable amount of seven per cent stock as well settled as to value and permanency as is the stock of the Metropolitan Life Insurance Company, and my circumstances were such that I could keep it, I would not willingly part with it for three times its face value. There is no good reason—that is to say, selfish reason—that should induce a stockholder of the Metropolitan Life to part with his interest in it at any price if he can afford to keep it. It would be valuable for transmission to heirs during generations to come.

I believe in the sincerity of the men who own and manage the Metropolitan Life. I have, during a quarter of a century, witnessed the work they have done to enhance the value of the policyholder's interests. I know, for example, that it is thru the voluntary efforts of the managers of this proprietary company that my correspondent will have the privilege of casting a vote for or against mutualization on December 28. And I also know that when he does vote that way, he will, to that extent, hurt himself. Why?

Because the policyholders in a mutual company are immeasurably more secure than those in a stock company. Again, why? Because speculators stand ready to pay fabulous prices for the controlling stock interest in any big life company. The stockholders of the Metropolitan would have no trouble in selling out at three for one in fifteen minutes. How much was paid for $50,200 par value of Equitable stock? Just $2,500,000. That is about fifty for one. And, too briefly, these are my reasons for approving the proposition to buy out the stock interests of the Metropolitan.

V. H. L., 503 Woodland Terrace, Philadelphia, Pa.—A difficult question to answer. Insurance statistics show losses of insured property only. Companies reporting to New York, 1913, received $3,874,075 premiums and paid $1,284,915 losses. Know of no compilation showing losses incurred on uninsured property.

Internal revenue stamps are not required on proofs of loss.

G. D. MILNE, Treasurer

BAYONETS

How does it feel to watch the enemy charging your trenches—and to hurl yourself on them, bayonet ready? A correspondent of the New York *Tribune* tells with absorbing vividness. The scene is the first line of French trenches.

"There they come! Every one down!"

Thru my own glasses I see for an instant a broken gray line, absolutely invisible to the naked eye. It is making slow progress, it seems, disappearing for a time, then crawling forward for a few minutes. All along our trench and in the one twenty-five yards behind the "click" of the magazines is heard.

A long silence, broken from time to time by the jokes or curses of the men. . . . One man shouts, imitating the Parisian street pedlers:

"Sauerkraut! Sauerkraut! Who wants nice, fresh sauerkraut?" And the whole trench roars: "I do!"

"Watch yourselves!" cries the lieutenant, "they're only 1500 meters off now," and, turning to me:

"For heaven's sake don't even put your hand out over the breastworks. In a minute it's going to hail cobblestones."

I assure him I have no such intention; in fact, I am stuck to my muddy seat, busily engaged in watching my fingers, which seem to have a funny jerking and trembling motion. I am trying to persuade myself the fault lies in too many cigarets. . . .

The lieutenant passes me his revolver, saying:

"You won't have to use it. They won't come within revolver shot. This is the fifth time in three days, and we're still here. Try a shot anyway when they get closer."

Risking a glance over the earthworks, he calls out:

"Five hundred meters! Get ready and aim low."

Just then I hear a rattle like that of hail on a zinc roof, and splashes of wet clay fall around us.

"Count twenty, aim, then fire!" calls the lieutenant, and all down the line the men start:

"One, two, three"—

Decidedly I must stop this cigaret smoking.

"Sixteen, seventeen, eighteen, nineteen"—

A volley, then another; a third—

"Keep it up, boys," shouts the officer, "they're still coming."

Over our heads, the trenches behind are firing at will. Now the oncoming Germans are singing. The sound is wafted back toward us with the smoke of their volleys. To me it seems they are right on top of us, and that each minute will bring a bayonet flashing on the breastworks.

Behind us, midway between the two trenches, a man rises from the ground where he has been crouching. It is the captain.

Two shrill whistles at thirty seconds' interval, and the men shout, arising from the trenches, for the whistles mean:

"Fix bayonets! Charge!" . . .

Behind us the shouts of the others are deafening. Hell is let loose. I become unconscious of the Germans in front, dragged in a tornado from which escape seems impossible.

Buzz . . . Buzz . . . A thousand humming birds seem to fill the air and rush by my ears.

No one is hit, but the rush forward is started.

Now I see greenish uniforms, so close that I note some of the faces are bearded. A thunder of shouts behind and beside me, a trample of running feet, and I am caught in the rush.

Bayonets down, mouths wide open, faces inhuman, eyes staring, yelling like mad men, a thousand devils singing from some inferno, fall upon the German lines. Men tumble, cries of pain rise shrill above the

shouts, arms like piston rods ram bayonets into yielding flesh.

For five minutes—a century it seemed—not a shot is fired. Then from the tangled mass of men a few graying forms spring out and run from us. More follow; then the whole wave breaks suddenly, and the backward rush of the Germans begins in earnest.

Their cries of fear and pain mingle with the shouts of the zouaves, and the guns crack once more. A hundred yards from me men are running, falling, scrambling away from the pursuing French. . . .

A long-drawn whistle and the last shots are fired. The zouaves, panting, laughing, shouting unintelligibly, one crying hysterically, assemble around their officers, each company by itself. A few linger to fire a farewell shot at the retreating enemy. The corporals count their squads, crying out their numbers, while over the field the company's doctors bend from time to time over a wounded fighter, friend or enemy.

Back in the trench, the lieutenant calls out:

"Soup!" and the men cheer, for to them soup—and it is hot soup today—is more important than Bavarians.

"That was easy," says the officer, turning to me.

"Two dead and only eight wounded in my company. After eating we'll go out and count William's men."

HOW JEWISH FARMERS CO-OPERATE IN AMERICA

There is a widely prevalent notion both among the friends and enemies of the Jewish race that the Jew has a deep-seated dislike for agriculture, preferring the city's easier roads to wealth. The fact that in Western Europe all agricultural land worth tilling is preempted by the large estates of the nobility and the small holdings of the peasantry is generally lost sight of; while in Russia, the only country which has large stretches of vacant tillable land, the Jew is prevented by law from engaging in agriculture as part of a deliberate policy of cruel persecution.

Outside of Palestine, the United States furnished the first opportunity for the Jew to prove that he was both willing and able to return to the principal occupation of his forefathers, which made ancient Palestine the Garden of the East. The convention of the Federation of Jewish Farmers of America which met in New York City from November 29 to December 2 has furnished tangible proof that the Jew hailing from Russia has risen to the opportunity offered him by his adopted country.

The settlement of Jews on farms commenced in 1881, almost as soon as they began to arrive from Russia. In 1908 the first attempt was made to organize them with local associations for mutual help. In 1909 thirteen such associations formed the Federation of Jewish Farmers of America, which at present comprizes sixty-three associations located in as many rural districts in eleven states, in addition to the provinces of Quebec and Saskatchewan in Canada. While most of the settlements are in the nearby states of New York, New Jersey, Connecticut, Massachusetts and Pennsylvania, there are enough Jewish farmers to form associations in such remote states as Nebraska, North

UTOPIA OR HELL

By

Theodore Roosevelt

Mr. Roosevelt is a scathing critic of "peace at any price." He is a stalwart advocate of the "peace of righteousness." In the article which he has written for The Independent he sets forth vigorously and clearly the alternatives which the world is facing—the hell of war or the utopia of a world league for enforcing the peace of righteousness.

This article, which will appear in The Independent of January 4, is one of the most important contributions that has recently been made to the discussion of world peace. Mr. Roosevelt is not a pacificist; but he was the first American to be awarded the Nobel prize for peace. He is a soldier; but it was on his initiative that the war between Russia and Japan was brought to an end. He is at odds with many peace advocates; but he is a practical peace advocate himself. He believes that the United States should be prepared for war; but as President he negotiated arbitration treaties with many nations and caused the United States to submit to arbitration the first case to come before The Hague Court.

THE INDEPENDENT, 119 W. 40th Street, New York

Dakota, Texas and Washington. The land owned by the Jewish farmers from Russia is valued at many millions of dollars.

The aim of the Federation is to further the improvement in "the social and material condition of the Jewish farmers in the country thru coöperative effort." In furtherance of this aim the Federation in the five years of its existence has been instrumental in creating a Coöperative Purchasing Bur .u thru which the farmer can buy his fertilizers, seeds, farm implements and other supplies at a great saving in price. This bureau has not only saved the farmers the middleman's profits, but has done educational work in teaching them the use of silos, commercial fertilizers, new seeds, etc. As a logical development of this institution the convention which met this week has created a Coöperative Marketing Bureau which is expected to save the farmer another middleman's profit in disposing of his products in the cities.

With the aid of the Jewish Agricultural and Industrial Aid Society, the Federation has promoted the establishment of Coöperative Credit Unions, an institution which is a unique expression of the practical idealism of the Jew. Any member of the union who is in urgent need of ready cash can obtain it within reasonable limits at a moment's notice, without any security, and has six months within which to repay it.

However, the Federation has felt that the question of farmer's credit would not be solved until it could come to his assistance in emancipating him from the mortgage sharks who have been charging poor Jewish farmers in the state of New York anywhere from twenty to 125 per cent on first mortgage loans. Accordingly, the first Farmers' Saving and Loan Association to receive a charter under the new land bank act of the state of New York was organized by members of the Federation at Centerville, New York, in the summer of this year, and the Jewish farmers proudly speak of it as their Agrarian Bank. It is hoped that it will remove the great barrier which keeps many Jews of moderate means from engaging in farming. In fact, the chief difficulty so far has not been in finding Jews in the city willing to engage in farming, but in keeping them from rashly investing their modest savings in farms until they have accumulated a sufficient amount to make success possible.

A Coöperative Fire Insurance Company which carries over $1,000,000 worth of insurance at a saving of many thousands of dollars to the farmer, a coöperative creamery, a coöperative pasteurizing plant, demonstration meetings in coöperation with the state agricultural colleges and experiment stations, schools to supplement instruction given to Jewish children in state rural schools, go to make up the many-sided activities of the young organization of Jewish pioneers of farming in the United States.

CHOPPING EFFICIENCY 100%

ROMER
AXES

Made in the United States, Romer Axes are known round the globe, as representing the highest development of axe quality, durability and cutting efficiency.

There is a Romer Axe for every chopping need—in the forest, the factory, the workshop, the home, on the farm, in every country and under all conditions.

For thirty-eight years, Romer supremacy has been a tradition in the axe trade. This is simply the result of the application of scientific principles, insistence on perfection of materials, advanced manufacturing methods, and adherence to the principle of Quality First.

The Romer Test is famous—driving an axe through solid iron without seriously injuring its shape or cutting edge. Every axe expert knows what that means: "Not too soft, not too hard."

THE HANDIAX
FOR EVERYBODY

No home is fully efficient without one. No camping, hunting or fishing trip is complete without one. No country place, stable, garage, woodshed or work bench is well equipped without one. The Boy Scouts and the Campfire Girls need the Handiax in their outfits. You never know when you may need an axe, but when you do you will need it badly and you will want a Handiax.

All hardware and sporting goods dealers who are well stocked carry the Romer Handiax. If *your* dealer does not, send us his name and we will see that he promptly supplies you.

$1.00

The Handiax comes in a handsome leather case, which keeps the steel bright, protects the keen edge, and makes the axe convenient to carry on the belt. No extra charge.

Romer Axe Co.
Dunkirk, New York

HOW ABOUT 1915?

WHAT ARE YOUR PLANS?

Do you think ahead or just drift along in the ordinary and dangerous sea of indecision?

Perhaps you will spend a lot of money for advertising next year!

Will you treat it as a matter of vital importance to you or will you let "some other fellow" do your thinking for you?

Wouldn't it pay you to dig into this subject yourself—it would.

Just ask yourself what you are shooting at and then try to find out if you are using the right sort of firearms and if your aim is straight.

You wouldn't use buckshot on a humming bird—would you?

Then why do you pay good money to talk to "impossibles" as customers?

We invite your personal and careful analysis of the

New York Commercial

(NOW IN ITS 120th YEAR)

It is the national daily morning business newspaper that is read by the executives and competent assistants in all lines of industry and finance.

What is of further value to you is the knowledge that its cream circulation extends to more than 1,800 cities and towns in the United States.

Because of its editorials, exclusive news and unmatched market service it bears a direct relationship to the prosperity of its readers and is therefore valued by them.

IT IS AN OFFICE NECESSITY

Now—if you have any desire to reach the biggest and best buying element in America during 1915 just take a little time and delve seriously into the relationship of our readers to your pocket book.

Perhaps you would like suggestions from our trained corps of business builders? We will gladly serve you.
